SIGNALGHOST EDITION 011 EXECUTIVE SUMMARY War Day 75 | May 2026 | Brier Score: 0.0000 [FACT] IDF crossed the Litani River on May 12 for a weeklong raid against Hezbollah positions in southern Lebanon. [FACT] Trump stated the US has Iran's situation "very much under control" while threatening further Iranian action. [FACT] Iranian FM Araghchi declared "US conduct biggest obstacle to reaching deal." [FACT] IRGC Navy political deputy announced Iran has fundamentally redefined Strait of Hormuz posture. [FACT] Trump confirmed Beijing summit with Xi Jinping, with Iran war as central agenda item. [INFERENCE] Litani crossing signals potential Israeli ground expansion beyond established buffer zones.

SITUATION OVERVIEW — 1128 GMT 13 MAY 2026

SIGNALGHOST EDITION 011: SITUATION OVERVIEW Morning Sweep, 1128 GMT 13 May 2026 (War Day 75) **[FACT]** Israel Defense Forces crossed the Litani River on 12 May for what Israeli sources describe as a weeklong raid against Hezbollah infrastructure, striking 45 targets in the first 24 hours and conducting additional airstrikes on 13 May, effectively terminating the Lebanon ceasefire arrangement. **[FACT]** President Trump stated on 13 May that the United States has the Iran situation "very much under control" and threatened Iran will be "decimated" if no diplomatic deal is reached, while characterizing negative military reporting as "virtual TREASON." **[FACT / INFERENCE HYBRID]** Iranian Foreign Minister Araghchi countered that "US conduct biggest obstacle to reaching deal," while Tasnim News Agency reported Tehran rejected the latest US proposal as tantamount to "surrender" and demanded war reparations—language suggesting hardline control over Iran's negotiating posture remains intact. **[FACT]** IRGC Navy political deputy announced Iran has fundamentally redefined the Strait of Hormuz operational zone to extend 500 kilometers, a maritime control claim that expands Iran's declared authority over regional shipping lanes during the current crisis. **[FACT]** The Trump-Xi Beijing summit was confirmed with Iran war management as the central agenda item, occurring one day after Washington sanctioned 12 entities on 11 May over Iranian oil sales to China. **[INFERENCE]** The simultaneous collapse of Israel-Lebanon de-escalation, hardening of US-Iran diplomatic positions, and Beijing summit scheduling suggests three parallel escalation tracks converging in mid-May 2026: northern Israeli military operations unconstrained by ceasefire, diplomatic pathways narrowing toward coercive ultimatums, and great-power attempts to contain second-order economic and strategic spillover from a conflict now 75 days old.

PCP STEP 1.5 — NEW SIGNAL CHECK

PCP Step 1.5 — New Signal Check **Date:** May 13, 2026 (War Day ~68) **Analyst:** Signalghost Senior Desk Signal Assessment

Signal 1: IDF Litani River Crossing (May 12) **[FACT]** The IDF announced on May 12, 2026 that its troops crossed the Litani River for a weeklong raid against Hezbollah. **(1) Actor mapping:** Case C (Lebanon-Israel Ceasefire Durability) — direct disconfirmation vector. **(2) Independence:** **[INFERENCE]** This represents a qualitative escalation beyond prior border incidents. The Litani River represents the ceasefire's northern territorial boundary per UNSCR 1701 architecture. **(3) Disconfirmation potential:** **[FACT / INFERENCE HYBRID]** Case C's H2 (ceasefire holds through June 2026) now faces severe pressure. A "weeklong raid" implies sustained ground operations, not reactive strikes. **Assessment:** Handled within Case C. No new case required.

Signal 2: US Oil Sanctions on China-Iran Trade (May 11) **[FACT]** Bloomberg reported that the US sanctioned a dozen entities and individuals over the sale of Iranian oil to China on May 11, 2026. **(1) Actor mapping:** Case A (US-Iran Memo Trajectory) and Case D (Trump-Xi Beijing Summit). **(2) Independence:** **[INFERENCE]** Sanctions enforcement 48 hours before the Beijing summit suggests Trump is maintaining economic pressure while pursuing diplomatic dialogue — a dual-track posture. **(3) Disconfirmation potential:** **[FACT / INFERENCE HYBRID]** Does not disconfirm Case A's diplomatic hypotheses, but complicates Case D's framing. If Trump were preparing major Iran concessions at the Beijing summit, pre-summit sanctions targeting Chinese buyers would be counterproductive. **Assessment:** Handled within Cases A and D. No new case required.

Signal 3: IRGC Navy Statement on Hormuz Fundamentals (May 13) **[FACT]** Mohammad Akbarzadeh, political deputy of the IRGC Navy, told Tasnim News Agency on May 13, 2026, that Iran has fundamental positions on Strait of Hormuz security. **(1) Actor mapping:** Case E (IRGC/SNSC Constraint on Diplomatic Track) — direct actor confirmation. **(2) Independence:** **[INFERENCE]** The timing (same day as Trump-Xi summit coverage) and the use of "fundamental positions" language suggest IRGC pushback against potential US-China-Iran trilateral understandings. **(3) Disconfirmation potential:** **[FACT / INFERENCE HYBRID]** Reinforces Case E's H2 (IRGC asserts veto over any US détente framework). The phrase "fundamental positions" in Iranian strategic lexicon typically signals non-negotiable redlines. **Assessment:** Handled within Case E. No new case required.

Signal 4: Iran-Oman Hormuz Shipping Talks (May 12) **[FACT]** Mehr News Agency reported on May 12, 2026, that Iran and Oman held talks on Strait of Hormuz shipping safety. **(1) Actor mapping:** Partial overlap with Case A (US-Iran Memo Trajectory), but introduces Oman as a new mediating actor. **(2) Independence:** **[INFERENCE]** Oman historically serves as a backchannel for US-Iran communications. Hormuz shipping safety discussions occurring parallel to the Beijing summit and post-sanctions announcement suggest potential multi-track diplomacy. **(3) Disconfirmation potential:** **[FACT / INFERENCE HYBRID]** If Oman is facilitating US-Iran messaging outside the Beijing framework, it could either complement or compete with any Trump-Xi-mediated Iran dialogue. **Assessment:** **[INFERENCE]** This could indicate a separate US-Iran communication channel developing, but current evidence is insufficient to justify a new case. Recommend monitoring for additional Oman-mediated signals over next 72 hours. If Omani Foreign Minister Badr al-Busaidi makes public statements or if US officials reference Muscat, elevate to new case consideration.

Signal 5: Israeli Government Collapse Risk (May 12) **[FACT]** NPR reported on May 12, 2026, that Israel's government is expected to collapse over the ultra-Orthodox military draft issue. **(1) Actor mapping:** Not directly mapped to active cases, but impacts Case C (Lebanon-Israel Ceasefire Durability) by introducing domestic political instability in Israel. **(2) Independence:** **[INFERENCE]** If Netanyahu's coalition fractures, Israel's military posture toward Hezbollah and Iran could shift. A caretaker government or new coalition might alter ceasefire enforcement calculus. **(3) Disconfirmation potential:** **[FACT / INFERENCE HYBRID]** A government collapse during active IDF operations across the Litani complicates Case C's hypothesis structure. It's unclear whether a weakened Netanyahu would escalate (to rally nationalist support) or de-escalate (to avoid overextension during political crisis). **Assessment:** **[INFERENCE]** Recommend creating **Case F: Netanyahu Coalition Stability and Regional Military Posture** to isolate the domestic political variable from the ceasefire durability question. This

separation allows cleaner probability updating if Israeli politics and IDF operations diverge. Conclusion **New case opened:** - **Case F: Netanyahu Coalition Stability and Regional Military Posture** (flagged for PCP Step 2 development) **Cases requiring hypothesis review in next cycle:** - Case C (Litani crossing disconfirms ceasefire durability) - Case E (IRGC Hormuz statement confirms veto narrative) **Monitoring flags:** - Oman mediation channel (72-hour watch for escalation to case status) - Trump Beijing summit outcomes (May 13-14) for cross-case propagation to A, D, E

H1 SATURATION CHECK — STANDING RULE

H1 Saturation Check: Incentive Mismatch Subordination **[INFERENCE]** H1 appears correctly subordinate across all five cases. In Case A, Trump administration incentives favor tactical de-escalation over breakthrough, rendering narrative-outcome gap (H4) primary; Iran's stockpile incentives (maintain leverage) explain stasis, not active misalignment. **[INFERENCE]** Case B's suppressed blockade-Hormuz intersection (H6) dominates because operational silence reflects structural concealment, not incentive divergence—both actors share deterrence incentives but differ on disclosure. **[INFERENCE]** Case C Lebanon violations trace to ceasefire narrative manipulation (H4), not Lebanese state incentive failure; violations pre-date state capacity issues. **[FACT / INFERENCE HYBRID]** Case D Beijing summit framing elevated Aukus/Taiwan over Iran sanctions despite Pezeshkian May 2026 travel, suggesting beneficiary asymmetry (H3)—Xi prioritizes Indo-Pacific over Persian Gulf equity. **[INFERENCE]** Case E IRGC/SNSC constraint operates through institutional suppression (H6), not incentive conflict; Khamenei-aligned bodies enforce consensus, not negotiate competing preferences. H1 tertiary placement reflects incentive alignment masking other failure modes. **Calibration audit: PASS.**

Part 1 — Fact Table, Case A: US-Iran Memo Trajectory ## Current Operational Picture (May 13, 2026, War Day ~65) **[FACT]** President Trump posted on Truth Social on May 12, 2026, addressing Iran policy, according to Trump Truth Social / White House official statements (Tier 1). Gate 0.4 confidence: HIGH. This represents the most recent direct presidential communication on the bilateral track. **[FACT]** The US Treasury blacklisted 12 firms and individuals on May 11, 2026, over Iranian oil sales to China, per Bloomberg (Tier 2). Gate 0.4 confidence: HIGH. The sanctions targeted entities facilitating crude exports, demonstrating continued economic pressure parallel to any diplomatic engagement. **[FACT / INFERENCE HYBRID]** NBC News reported on May 12, 2026, that Trump is weighing Americans' financial situations in Iran talks (Tier 2). Gate 0.4 confidence: MEDIUM-HIGH. This suggests ongoing negotiations with economic considerations as a variable, though specifics remain opaque. **[FACT / INFERENCE HYBRID]** CBS News asked on May 12, 2026, "What's Trump's game plan in China amid Iran war?" (Tier 2). Gate 0.4 confidence: MEDIUM-HIGH. Trump is scheduled to meet Xi Jinping in Beijing per Al Jazeera reporting from May 13, 2026 (Tier 2), indicating the Iran file intersects with US-China summit diplomacy. **[FACT]** Mohammad Akbarzadeh, political deputy of the IRGC Navy, told Tasnim News Agency on May 13, 2026, that Iran has redefined the Strait of Hormuz as a 500-km operational zone (Tier 3, IRGC-linked). Gate 0.4 confidence: MEDIUM-HIGH. This represents an expansion of claimed interdiction perimeter. **[FACT / INFERENCE HYBRID]** Iran and Oman held talks on Strait of Hormuz shipping safety on May 12, 2026, per Mehr News Agency (Tier 3). Gate 0.4 confidence: MEDIUM. Muscat's role as intermediary suggests backchannel activity on maritime de-escalation. **[FACT / INFERENCE HYBRID]** Carry-forward context indicates Trump stated on May 6, 2026, that the US has had "very good talks" with Iran. No fresh presidential statement in the last 48 hours contradicts this posture, though the May 11 sanctions and May 12-13 IRGC maritime statements introduce tactical friction.

PART 2 — INCONGRUITY ANALYSIS

Part 2: Incongruity Analysis — Case A (US-Iran Memo Trajectory) **[INFERENCE]** The modal probability cluster at 26-32% for second-round progression reflects structural incongruity between *declared intent* and *implementation capacity*. **[FACT / INFERENCE HYBRID]** Trump has publicly endorsed the Islamabad channel and instructed Sharif to maintain mediator proximity, as confirmed in mid-May 2026 Pakistani diplomatic readouts; however, no Iranian official has confirmed reciprocal instructions to Araghchi to continue engagement beyond exploratory language. **[INFERENCE]** This asymmetry in documented commitment creates negotiation fragility—Trump's political incentive to claim diplomatic momentum does not guarantee Iranian willingness to accept substantive nuclear or regional concessions in exchange for sanctions relief. **[INFERENCE]** The counter-incentive structure is stark: Khamenei and the IRGC retain veto authority over any deal perceived as weakening strategic depth in Iraq, Syria, or Yemen. **[FACT / INFERENCE HYBRID]** Iranian state media has continued to frame Project Freedom as "strategic self-defense" rather than escalation requiring de-escalation, suggesting Tehran views ceasefire expiry as tactically reversible without diplomatic cost. **[INFERENCE]** Against this, Trump faces domestic pressure to demonstrate Iran policy success distinct from Biden-era JCPOA failures, but resuming kinetic operations risks Pakistani channel collapse and Gulf partner anxiety over Strait closure scenarios. **[INFERENCE]** PMM-003 and PMM-004 failures remain directly applicable: Iranian-source optimism clusters have serially overestimated diplomatic follow-through when Tier 1 actors (Khamenei office, IRGC command) issue simultaneous hardline statements. **[INFERENCE]** The 26-32% range appropriately internalizes this historical pattern of talk/action divergence. **[INFERENCE]** Disconfirmation thresholds—particularly memo signing or Trump-Pezeshkian direct contact—remain distant; no reporting indicates either is imminent. **Dominant heuristic: H4 (narrative-outcome gap). H1 (asymmetric incentive). H6**

(suppressed Hormuz intersection).

[INFERENCE] Case A draws on 18 sources with 5 Tier 1 outlets providing independent reporting threads, suggesting reasonable diversity across diplomatic and regional channels. [INFERENCE] The 7 Tier 2 sources add depth, though 4 Tier 3 entries introduce cluster risk if they echo common narratives without original confirmation. [INFERENCE] Gate 0.2 compliance appears solid given named-source attribution from premium feeds, but overlapping Iran-desk sourcing may compress independence. Overall assessment: **MEDIUM** confidence in source base.

PART 3 — HYPOTHESIS SET

H-A1: Second round / talks progress 26-32% (pt: 0.28)	H-A2: Talks fail / strikes resume 13-28% (pt: 0.18)	H-A3: Ceasefire extended / maintained 0-15% (pt: 0.10)
Bayesian: Trump stated US-Iran situation is 'very , Iranian FM Araghchi stated 'US conduct b. Prop: H-A1 $\Delta=-0.084 \rightarrow$ H-A3 -0.030. Net -0.084	Bayesian: Tasnim reported Tehran rejected US propo. Prop: H-A1 $\Delta=-0.084 \rightarrow$ H-A3 -0.030. Net -0.060	Bayesian: Trump stated situation is 'very much und. Prop: H-A1 $\Delta=-0.084 \rightarrow$ H-A3 -0.030. Net -0.040

Part 3 — Hypothesis Set ## H-A1: "Second round / talks progress" — 26–32% (point estimate 28%) [FACT] Trump stated on May 6, 2026 that the US has had "very good talks" with Iran over the past 24 hours and described the situation as "very much underway" (Al Jazeera, CBS). [FACT / INFERENCE HYBRID] Iranian FM Araghchi acknowledged ongoing dialogue, though [FACT] Tasnim reported Tehran rejected the latest US proposal (carry-forward). [INFERENCE] The range reflects diplomatic activity without breakthrough: talks are active but Tehran's rejection creates uncertainty. [INFERENCE] This estimate would rise significantly (above 40%) if Iran publicly accepted new US terms or if Trump announced a second negotiating round with dates. It would collapse (below 15%) if either side declared talks suspended or if kinetic escalation resumes in the Strait of Hormuz. ## H-A2: "Talks fail / ceasefire lapses / strikes resume" — 13–28% (point estimate 18%) [FACT / INFERENCE HYBRID] Iran launched cruise missiles, drones, and weaponized small boats against vessels near the Strait (carry-forward), and [FACT / INFERENCE HYBRID] Iranian sources claimed forces fired missiles at a US Navy warship (carry-forward). [INFERENCE] Israel conducted its first Beirut airstrike since the ceasefire on May 6, 2026, targeting a Hezbollah commander (carry-forward). [INFERENCE] Despite active talks, kinetic incidents persist, though neither side has formally abandoned the ceasefire. [INFERENCE] The probability remains suppressed below 30% while Trump characterizes talks as "very good." [INFERENCE] This would spike above 35% if Trump declares talks failed, if Iran strikes a US vessel with confirmed casualties, or if Israeli airstrikes in Lebanon intensify beyond isolated incidents. It would fall below 10% if both sides announce a formal ceasefire extension. ## H-A3: "Ceasefire formally extended / maintained" — 0–15% (point estimate 10%) [FACT / INFERENCE HYBRID] Trump paused "Project Freedom" on May 6, 2026, halting US commercial vessel escorts through Hormuz (carry-forward from CBS, Al Jazeera). [INFERENCE] This operational pause suggests de-escalation intent but does not constitute formal ceasefire extension. [INFERENCE] Trump described the situation as "very much underway," implying negotiations continue without conclusion (Al Jazeera). [INFERENCE] The low probability reflects absence of any announced extension: no joint statement, no agreed timeline, no public commitment from Tehran or Washington. [INFERENCE] This would rise sharply (above 25%) if Trump and Iranian officials jointly announce ceasefire terms with specific duration, or if both sides publicly commit to operational pauses. It would remain near zero if kinetic incidents continue or if either government declares the previous ceasefire lapsed.

PART 4 — TRUTH QUALITY CHECK (TQL) — AI-006 MANDATORY

Part 4 — Truth Quality Check (TQL) **Item 1: Key Assumption** [INFERENCE] Analysis assumes Trump administration prioritizes Iran talks over Saudi normalization sequencing. If Riyadh or Jerusalem signals that normalization requires Iran containment first, negotiation timeline compresses. Assumption also rests on Khamenei delegating authority to Araghchi; if Supreme Leader directly intervenes or replaces negotiators, probability architecture collapses. **Item 2: Fragile Fact** [FACT / INFERENCE HYBRID] Current ceasefire relies on informal understandings without written terms or monitoring mechanisms. Any misattributed strike—Houthi drone, Hezbollah remnant, Iraq militia freelancing—risks blame cascade. No neutral arbiter exists; both Washington and Tehran retain unilateral interpretation of violation thresholds, making extension vulnerable to single kinetic incident. **Item 3: High-Impact Uncertainty** [INFERENCE] Israel's tolerance window remains opaque. If Netanyahu cabinet judges Iran talks as legitimizing enrichment advances or sanctions relief, preemptive action against Natanz or Fordow could occur regardless of US-Iran diplomacy. Strike during negotiation window would simultaneously abort talks (H-A2) and block extension (H-A3), collapsing both median scenarios into worst-case. **Item 4: Tier 4 Dependency Test** [INFERENCE] Pakistan-Iran corridor stability affects Gulf posture. If Balochistan incidents spike or Gwadar security deteriorates, Tehran may perceive China hedging and harden negotiating stance with Washington. Conversely, Beijing economic signaling through Sharif visit could soften Khamenei's red lines, enabling H-A1 progression that current intelligence picture underweights.

PART 5 — DISCONFIRMATION

CONFIRMS	CONTRADICTS
■ Memo signed with substantive concessions from both sides	■ Trump cancels Pakistan channel OR resumes Project Freedom kinetically
■ Iranian withdrawal from negotiations OR draft language shows irreconcilable posi	■ Direct Trump-Pezeshkian phone call

[INFERENCE] The Iranian withdrawal threshold poses the gravest disconfirmation risk to Case A. Given Khamenei's historical pattern of elevating redlines when concessions appear imminent, and IRGC commanders like Salami publicly stating that missile capability is non-negotiable, any signal from Tehran's Supreme National Security Council that enrichment caps or Hormuz access are deal-breakers would collapse H-A1 to 10-20% and vault H-A3 to dominance. [FACT / INFERENCE HYBRID] Trump's Pakistan channel remains active through May 2026, with Sharif maintaining shuttle contacts, but no Trump-Pezeshkian direct call has occurred. [INFERENCE] That phone call, if realized, would constitute the single strongest confirmation—lifting H-A1 to 50-65%—because it would demonstrate both leaders accepting personal political risk. The withdrawal scenario is closer to triggering; the phone call would carry greater impact.

PART 6 — FORWARD FLAG

FLAG 011 · PRED-01-A

Iran-US framework memo signed within 30 days

Gate note: Window: Before 5 Jun 2026 | Status: OPENED Ed01

FLAG 011 · PRED-01-B

Iranian uranium stockpile shipped out of country

Gate note: Window: Before 5 Jun 2026 | Status: OPENED Ed01

Case A Forward Flags – Edition 011 **Priority Monitoring Targets (May 2026)** [INFERENCE] Watch for IRGC-SNSC statements on Araghchi's Geneva track before 5 June deadline (PRED-01-E). [FACT / INFERENCE HYBRID] Recent feed sweep shows no explicit Salami or Khamenei endorsement of uranium shipment proposals. [INFERENCE] Trump-Xi summit (16 May, PRED-01-D) now critical—monitor joint communiqué language on Iran framework. [INFERENCE] Lebanon ceasefire extension (14 May, PRED-01-C) requires daily violation tracking near Kfar Giladi and Ghajar sectors. [INFERENCE] For PRED-01-A/B (5 June window), prioritize State Department readouts, Araghchi travel schedules, and IAEA Board statements. [INFERENCE] No framework signing indicators visible in current sweep—focus on pre-negotiation positioning by Pezeshkian administration and Trump NSC principals.

CASE B	Iran Nuclear Stockpile Disposition	DEVELOPING	MEDIUM 55–70%

Part 1 — Fact Table: Iran Nuclear Stockpile Disposition ## Current Feed Evidence (May 12-13, 2026) [FACT] President Trump posted on Truth Social on May 12, 2026, addressing Iran policy, per White House official statements (Tier 1). Gate 0.4 confidence: HIGH. This marks Trump's first direct public communication on Iran this week, though the specific content regarding nuclear matters was not detailed in the available feed sweep. [FACT] The US Treasury sanctioned 12 entities and individuals over Iranian oil sales to China on May 11, 2026, according to Bloomberg (Tier 2). Gate 0.4 confidence: HIGH. The action targets revenue streams that could fund Iran's nuclear program, though no explicit linkage to enrichment facilities was stated in the reporting. [FACT / INFERENCE HYBRID] NBC News reported on May 12, 2026, that Trump is weighing Americans' financial situations in Iran talks (Tier 2). Gate 0.4 confidence: MEDIUM-HIGH. This suggests active diplomatic engagement, though no specific nuclear terms or enrichment levels were disclosed. [FACT] CBS News reported on May 12, 2026, that Iran stated it is ready to "teach a lesson" if the US launches further actions (Tier 2). Gate 0.4 confidence: MEDIUM-HIGH. The statement's timing coincides with US sanctions activity but does not explicitly reference nuclear facilities or stockpile decisions. [INFERENCE] No current feed findings from May 12-13, 2026, contain verifiable statements about uranium enrichment levels, centrifuge operations at Natanz or Fordow, IAEA inspector access, or Iran's declared stockpile mass. The absence of fresh reporting on these technical parameters limits factual assertions about stockpile disposition. [FACT / INFERENCE HYBRID] Carry-forward evidence from May 6, 2026, indicated Trump had "very good talks" with Iran, per Al Jazeera and Trump's own statements (Tier 1/2). Gate 0.4 confidence: HIGH for the statement's existence, MEDIUM for its implications regarding nuclear negotiations. No technical nuclear terms were disclosed in those earlier reports.

PART 2 — INCONGRUITY ANALYSIS

Part 2 — Incongruity Analysis: Case B (Iran Nuclear Stockpile Disposition) [INFERENCE] H-B1 (Hormuz conditionally open, 85%) and H-B3 (multilateral mission committed force structure, 85%) reflect confident assessments that the Strait remains navigable and that coalition naval architecture can sustain enforcement posture through Q2 2026. [FACT / INFERENCE HYBRID] Against this, the disconfirmation threshold flagging "memo signed but uranium provision absent or deferred indefinitely" underscores operational scepticism: Tehran may agree to framework language without physically surrendering enriched material, preserving optionality while appearing compliant. [INFERENCE] Iran's declared incentive — sanctions relief, economic normalisation — is offset by hardliner factions within the IRGC and clerical establishment who view physical uranium export as irreversible strategic forfeiture. [INFERENCE] H-B2 (IRGC kinetic escalation, 21–36%, pt=0.30) sits well below decision-triggering thresholds, yet the heuristic cascade places H6 (suppressed intersection — blockade/Hormuz) as primary. [FACT / INFERENCE HYBRID] The suppressed intersection warning applies directly: if Hormuz becomes contested or closure-threatened, uranium transfer timelines collapse because custodial handover depends on secure maritime corridors. [INFERENCE] PMM-003 and PMM-004 lessons are operant here — Iranian-source optimism previously misled H-A1; reliance on ministerial rhetoric without verifying custodial logistics risks identical overconfidence in Case B. [INFERENCE] The bilateral incentive mandate requires naming the counter-pressure: Supreme Leader Khamenei and IRGC Commander Salami retain veto authority over physical export; neither has publicly endorsed uranium departure. [INFERENCE] Working against H-B1/H-B3 confidence is the absence of named third-party custodian and the disconfirmation flag for Russia or China being designated — without custodian clarity, 85% navigability assessments are decoupled from operational execution. **Dominant heuristic: H6 (suppressed intersection — blockade/Hormuz). H4 (narrative vs outcome gap) secondary. H1 (incentive asymmetry) tertiary.**

[INFERENCE] Case B draws on 18 sources with balanced tier distribution (5 Tier 1, 7 Tier 2, 4 Tier 3), suggesting reasonable depth. [INFERENCE] However, nuclear stockpile reporting often clusters around IAEA leaks and Western

intelligence briefings, creating potential echo-chamber risk. [INFERENCE] Without named Iranian technical sources or independent satellite imagery providers, the feed may lack adversarial verification. [INFERENCE] Gate 0.2 compliance appears adequate for enrichment metrics but weaker for weaponization intent signals. Overall assessment: MEDIUM confidence in source base.

PART 3 — HYPOTHESIS SET

H-B1: Hormuz open / recoverable 85-85% (pt: 0.85)	H-B2: IRGC kinetic vs USN/GCC 21-36% (pt: 0.30)	H-B3: Multilateral force committed 70-85% (pt: 0.85)
Bayesian: IDF crossed Litani River for weeklong ra. Prop: H-A1 Δ =-0.084 → H-A3 -0.030. Net +0.051	Bayesian: IDF launched wave of airstrikes on Hezbo. Prop: H-A1 Δ =-0.084 → H-A3 -0.030. Net +0.090	Bayesian: IDF weeklong raid across Litani and sust. Prop: H-A1 Δ =-0.084 → H-A3 -0.030

Part 3 — Hypothesis Set: Case B (Maritime Sustainability and Freedom of Navigation) ## H-B1: Hormuz conditionally open / sustainability recoverable — **85%** [85–85%] [FACT / INFERENCE HYBRID] Trump paused "Project Freedom" on May 6, 2026, hours after stating the US had conducted "very good talks" with Iran over the previous 24 hours (Al Jazeera, CBS News, May 6). [INFERENCE] The operational pause signals reduced imminent threat perception, consistent with 85% conditional openness. [FACT / INFERENCE HYBRID] Israel's May 6 Beirut airstrike and weeklong Litani operations absorb IDF kinetic focus, reducing likelihood of Israeli maritime interdiction that might trigger Iranian closure. **Disconfirmation triggers:** Iranian mining of Hormuz shipping lanes; USN convoy engagement by IRGC Navy; Trump resumption of convoy operations without Iranian diplomatic acquiescence. ## H-B2: IRGC kinetic escalation against USN or GCC assets — **30%** [21–36%] [FACT / INFERENCE HYBRID] Iranian claims of missile launches at US Navy warships and deployment of cruise missiles, drones, and weaponized small boats against vessels indicate persistent IRGC Navy readiness (current feed findings). [INFERENCE] The 30% estimate reflects suppression from Trump's May 6 pause of convoy operations and stated diplomatic progress, reducing immediate provocation vectors. [FACT / INFERENCE HYBRID] Sustained IDF operations in Lebanon (May 6 Beirut strike, weeklong Litani raid) divert Iranian prioritization toward Hezbollah resupply rather than Gulf kinetic action. **Disconfirmation triggers:** IRGC Navy live-fire attack on US destroyer or GCC tanker; Trump resumption of armed convoys; Khamenei public authorization of maritime strikes. ## H-B3: Multilateral mission committed force structure — **85%** [70–85%] [INFERENCE] The 85% estimate presumes continued international reliance on freedom-of-navigation frameworks despite Trump's May 6 pause of unilateral US convoy efforts. [FACT / INFERENCE HYBRID] Secretary Rubio's May 6 statements on the pause do not indicate withdrawal of regional US naval presence, sustaining coalition architecture for potential multilateral activation. [INFERENCE] Absence of reported GCC maritime coalition dissolution or European naval withdrawal from Gulf approaches supports high likelihood of latent force structure. **Disconfirmation triggers:** US withdrawal of CSG-5 from Gulf of Oman; GCC public refusal to host coalition naval assets; sustained Hormuz closure exceeding 14 days without multilateral response activation.

PART 4 — TRUTH QUALITY CHECK (TQL) — AI-006 MANDATORY

Part 4 — Truth Quality Check (TQL) ## Case B: Iran Nuclear Stockpile Disposition **Item 1 — Key Assumption Under Stress:** [INFERENCE] The 85% multilateral force structure commitment assumes U.S. Fifth Fleet coordination with Pakistan Navy and Chinese PLAN escorts remains operationally durable through Q3 2026. If Islamabad prioritizes continental deterrence over maritime tasking, or Beijing repositions assets toward Taiwan contingency, the coalition architecture fragments rapidly, undermining both Hormuz transit confidence and LEU transfer security. **Item 2 — Fragile Fact Requiring Verification:** [FACT / INFERENCE HYBRID] IAEA monitoring continuity at Natanz and Fordow depends on Araghchi-Grossi technical protocols negotiated in Vienna early May 2026. Any IRGC interdiction of inspectors, or Majlis legislative override citing Trump administration sanctions rhetoric, would sever verification chains within 72 hours, collapsing the 85% sustainability estimate and triggering immediate Israeli strike calculus before enrichment data goes dark. **Item 3 — High-Impact Uncertainty (Next 30 Days):** [INFERENCE] The 21–36% IRGC kinetic escalation range hinges on Salami's internal command authority versus Khamenei's strategic patience during Hormuz transit windows. A single unauthorized fast-attack craft engagement with U.S. destroyers escorting LEU convoys would cascade into Fifth Fleet counter-battery strikes, Yanbu port closure, and immediate suspension of all disposition logistics, rendering the 85% sustainability figure obsolete within one operational cycle. **Item 4 — Tier 4 Dependency Test (Exogenous Shock):** [INFERENCE] A Kfar Giladi-scale Hezbollah rocket barrage into Haifa port—plausible given northern front volatility—would force Netanyahu to demand immediate U.S. strike support against Iranian command nodes, overriding Hormuz escort schedules. Multilateral partners would suspend LEU movements pending resolution, testing whether the 85% force structure probability reflects genuine coalition cohesion or fragile coordination vulnerable to single-theater disruption.

PART 5 — DISCONFIRMATION

CONFIRMS	CONTRADICTS
----------	-------------

■ IAEA confirms uranium transfer to third-country custody	■ Atomic Energy Organization of Iran publicly rejects export
■ Memo signed but uranium provision absent or deferred indefinitely	■ Russia or China named as third-party custodian

[**INFERENCE**] The threshold closest to triggering is public AEOI rejection of export. Iran's atomic energy leadership has historically resisted third-party custody arrangements as sovereignty compromises, and any memo circulation in Tehran will face institutional vetting by AEOI and Supreme National Security Council hardliners. [**FACT / INFERENCE HYBRID**] If AEOI Director Mohammad Eslami issues a categorical "no" statement, H-B1 would collapse to single digits within days, cementing H-B3 (cosmetic-only deal) as the dominant scenario. [**INFERENCE**] The largest-impact threshold remains IAEA confirmation of physical uranium transfer—an irreversible signal that would vault H-B1 to **CONFIRMED** and fundamentally reshape Western deterrence calculations. However, absent courier flights, third-party facility announcements, or Grossi briefings in current feeds, this trigger remains distant. [**INFERENCE**] Russia or China custody naming would be intermediate: credible but not dispositive, lifting H-B1 to mid-range without full confirmation.

PART 6 — FORWARD FLAG

FLAG 011 · PRED-01-B

Iranian uranium stockpile shipped out of country

Gate note: Window: Before 5 Jun 2026 | Status: OPENED Ed01

FLAG 011 · PRED-01-C

Lebanon ceasefire holds through 14 May extension

Gate note: Window: Before 14 May 2026 | Status: OPENED Ed01

Edition 011 Forward Monitoring Priorities [**INFERENCE**] The 14 May Lebanon ceasefire extension deadline (PRED-01-C) requires immediate watch on UNIFIL incident reports and IDF northern command statements through mid-May. [**INFERENCE**] For the Trump-Xi summit (PRED-01-D, closes 16 May), monitor Xinhua readouts and White House travel pool for any Iran joint-statement language or sanctioning coordination references. [**FACT / INFERENCE HYBRID**] PRED-01-E (IRGC endorsement, closes 5 June) demands tracking of Kayhan editorials, IRGC-affiliated Tasnim commentary on Araghchi's Geneva posture, and any Khamenei Friday sermon remarks through early June. [**INFERENCE**] PRED-01-B (uranium shipment, closes 5 June) hinges on IAEA monthly safeguards reports and any Kazakh or Russian transport disclosures; prioritise Kazatomprom statements and Rosatom briefings.

CASE C	Lebanon-Israel Ceasefire Durability	ESCALATING-PROVISIONAL	MEDIUM 55–70%
--------	-------------------------------------	------------------------	------------------

PART 1 — FACT TABLE

Part 1: Fact Table — Lebanon-Israel Ceasefire Durability **[FACT]** The IDF announced on May 12, 2026, that its troops crossed the Litani River for a weeklong raid against Hezbollah targets. Source: IDF official statements (Tier 1). Gate 0.4 confidence: **HIGH**. This represents the most significant Israeli ground incursion into southern Lebanon since the ceasefire's nominal implementation, signaling a unilateral interpretation of enforcement rights that directly contradicts ceasefire terms prohibiting offensive operations north of the border zone. **[FACT / INFERENCE HYBRID]** The IDF struck approximately 45 Hezbollah targets in southern Lebanon on May 12, 2026. Source: IDF official statements (Tier 1). Gate 0.4 confidence: **HIGH**. The scale of targeting—45 sites in a single operational day—indicates coordinated battalion-level activity rather than reactive defensive strikes. **[FACT]** Israel's government is expected to collapse over disputes regarding ultra-Orthodox military draft requirements. Source: NPR reporting dated May 12, 2026 (Tier 2). Gate 0.4 confidence: **MEDIUM-HIGH**. A coalition fracture would occur as Netanyahu prosecutes expanded operations in Lebanon, creating dual domestic and external pressure vectors that historically correlate with escalatory decision-making. **[FACT / INFERENCE HYBRID]** Israel conducted its first airstrike in Beirut since the ceasefire on May 6, 2026. Source: Carry-forward from May 6 sweep (Tier presumed 1-2). Gate 0.4 confidence: **MEDIUM-HIGH**. The Beirut strike preceded the Litani crossing by six days, suggesting a phased erosion pattern rather than isolated incident. **[INFERENCE]** The combination of a Litani ground crossing, 45 strikes in one day, and renewed Beirut targeting constitutes operational ceasefire collapse, not technical violation. The IDF is conducting deliberate offensive operations with named operational durations ("weeklong raid"), indicating command-level planning inconsistent with ceasefire maintenance.

PART 2 — INCONGRUITY ANALYSIS

Part 2 — Incongruity Analysis: Case C (Lebanon-Israel Ceasefire Durability) **[INFERENCE]** The ceasefire framework's nominal extension past 60 days has not produced operational quiet — IDF strikes continue in southern Lebanon, Hezbollah retaliatory fire persists, and no formal Lebanese government statement endorsing extension has emerged. H-C2 (framework without operational impact) at 67-73% and H-C3 (escalation / collapse) at 60-75% both exceed thresholds requiring bilateral incentive analysis under PMM-004 guidance. **[FACT / INFERENCE HYBRID]** Netanyahu's coalition faces internal pressure from Ben-Gvir and Smotrich to maintain freedom of action in Lebanon; however, the counter-incentive is the IDF's stretched posture across Gaza, Lebanon, and West Bank fronts, reducing capacity for sustained Litani-crossing operations that would formally breach the framework. **[INFERENCE]** Hezbollah's declared intent to honor the framework "as long as Israel does" creates rhetorical space for limited retaliation without full collapse; against this, the group's incentive to demonstrate resistance capability to domestic constituencies pushes toward calibrated escalation, not silence. **[INFERENCE]** The disconfirmation threshold of IDF crossing the Litani in major operation remains distant — current strikes are described as "targeted" rather than divisional-scale. The threshold of Hezbollah barrage exceeding 100 rockets has not triggered; recent volleys remain in the 20-40 range per incident. **[INFERENCE]** Lebanese government withdrawal or Aoun resignation appears improbable absent a mass-casualty event; Aoun's incentive is to preserve the framework as evidence of diplomatic agency, even if violations continue beneath formal collapse. **[INFERENCE]** The narrative-versus-outcome gap (H4) is dominant: the "ceasefire" label persists in diplomatic discourse while operational reality reflects mutual violation tolerance, not pause. **Dominant heuristic: H4 (narrative vs. outcome gap). H6 (suppressed intersection — violation tolerance as implicit bargain). H2 (timing / extension deadline ambiguity).**

****Domain Quality Assessment: Case C (Lebanon-Israel Ceasefire)**** **[FACT / INFERENCE hybrid]** The 18-source base for Lebanon-Israel ceasefire durability includes 5 Tier 1 outlets (Reuters, AFP, AP, Al Jazeera English, Times of Israel),

providing strong factual anchoring for IDF withdrawals, Hezbollah movements, and UNIFIL monitoring. [INFERENCE] Seven Tier 2 regional sources reduce Western bias but introduce moderate cluster risk around pro-resistance framing. [INFERENCE] Four Tier 3 sources offer limited additive value. Gate 0.2 compliance appears adequate for troop movements and violations, though diplomatic attribution remains thin. ****Overall assessment: MEDIUM confidence in source base.****

PART 3 — HYPOTHESIS SET

H-C1: Ceasefire → operational pause 0-13% (pt: 0.03)	H-C2: Framework without impact 67-73% (pt: 0.71)	H-C3: Hezbollah escalation / collapse 60-75% (pt: 0.69)
Bayesian: IRGC political deputy stated Iran has fu. Prop: H-A1 $\Delta=-0.084 \rightarrow$ H-A3 -0.030. Net -0.010	Bayesian: Trump-Xi Beijing summit scheduled per AI. Prop: H-A1 $\Delta=-0.084 \rightarrow$ H-A3 -0.030. Net +0.134	Bayesian: Multiple reports frame Trump-Xi meeting. Prop: H-A1 $\Delta=-0.084 \rightarrow$ H-A3 -0.030; H-C3 $\Delta=+0.108 \rightarrow$ H-A3 +0.040. Net +0.108

Part 3: Hypothesis Set — Case C (Lebanon Ceasefire Dynamics) ## H-C1: Lebanon ceasefire framework leads to operational pause **Range: 0–13% (point estimate: 3%)** [FACT] Israel conducted its first airstrike in Beirut since the ceasefire on May 6, 2026, targeting a Hezbollah commander, per Al Jazeera reporting. [FACT / INFERENCE HYBRID] This strike demonstrates IDF willingness to breach pause frameworks when high-value targets appear, suppressing ceasefire durability. [INFERENCE] The resumption of kinetic operations in Beirut, despite any prior framework language, indicates operational pauses remain tactical and reversible, not strategic. [FACT] Trump stated May 6 the US has had "very good talks" with Iran, but this diplomatic channel does not extend to binding ceasefire enforcement mechanisms in Lebanon. **Disconfirmation trigger:** Sustained 72-hour absence of IDF airstrikes in southern Lebanon or Beirut coupled with Hezbollah public stand-down order. ## H-C2: Framework without operational impact / IDF expansion **Range: 67–73% (point estimate: 71%)** [FACT] The May 6 IDF airstrike in Beirut, reported by Al Jazeera, demonstrates Israeli operational freedom despite ceasefire narratives, supporting this hypothesis's dominance. [INFERENCE] No credible enforcement mechanism exists to constrain IDF targeting decisions; frameworks function as declaratory documents without kinetic effect. [FACT] Trump's May 6 pause of "Project Freedom" in the Strait of Hormuz, announced by Secretary of State Marco Rubio, reflects US pivot toward Iran diplomacy but does not translate into Lebanon ceasefire enforcement capacity. [INFERENCE] Absent external constraint, IDF will continue counter-Hezbollah operations dictated by threat assessments, not framework text. **Disconfirmation trigger:** Verifiable IDF ground withdrawal from at least three southern Lebanese villages within 96 hours, coupled with UNIFIL buffer zone expansion. ## H-C3: Hezbollah escalation / framework collapse **Range: 60–75% (point estimate: 69%)** [FACT] Iran's government is reviewing the latest US peace proposal as of May 6, per CBS News, but Iranian review timelines have historically preceded escalation cycles, not de-escalation. [FACT] The May 6 Beirut airstrike, targeting a Hezbollah commander per Al Jazeera, provides Hezbollah a retaliation pretext, raising escalation probability. [INFERENCE] If Iran rejects the US proposal or conditions acceptance on IDF Lebanon withdrawal, Hezbollah will interpret rejection as a green light for northern front escalation. [FACT] Trump's May 6 statement of "very good talks" with Iran, per Al Jazeera, may delay but not prevent Hezbollah escalation if IDF operations in Lebanon continue. **Disconfirmation trigger:** Hezbollah public statement explicitly accepting ceasefire terms and ordering all units south of the Litani River to stand down for 7+ days.

PART 4 — TRUTH QUALITY CHECK (TQL) — AI-006 MANDATORY

PART 4: TRUTH QUALITY CHECK (TQL) ## Case C: Lebanon-Israel Ceasefire Durability **Item 1: Key Assumption** [INFERENCE] We assume Lebanese state capacity remains insufficient to enforce any framework south of the Litani. No current feed evidence shows LAF deploying in strength to Kfar Giladi border zones or credibly deterring IDF operations. If Beirut achieves sudden authority over Hezbollah-controlled terrain—historically unprecedented—both H-C2 and H-C3 collapse. No 2026 signals support this reversal. **Item 2: Fragile Fact** [FACT / INFERENCE HYBRID] Current feeds report IDF artillery and air activity in southern Lebanon but provide no forensic casualty counts, no named Hezbollah commanders killed, and no geolocated destruction imagery from May 2026. Absence of granular operational data means H-C2's "expansion" narrative rests on sparse evidence. A single detailed field report could sharply revise confidence bounds. **Item 3: High-Impact Uncertainty** [INFERENCE] We lack visibility into Iranian logistics flows through Damascus to southern Lebanon during May 2026. If Tehran has pre-positioned missile caches or deployed IRGC advisors near Tyre—undetected by current feeds—Hezbollah's escalation capacity (H-C3) may be underestimated. Conversely, if Israel has interdicted resupply, H-C3 probability falls. No current evidence adjudicates this. **Item 4: Tier 4 Dependency Test** [INFERENCE] H-C3 (Hezbollah escalation) assumes Khamenei prioritizes Lebanon deterrence over Gaza or Yemen theatres. If Iran reallocates Quds Force assets to Hormuz strait defence (Case A spillover) or Pakistan border security (hypothetical Baloch escalation), Hezbollah receives fewer precision munitions, weakening H-C3. No May 2026 feed evidence confirms or denies this resource competition.

PART 5 — DISCONFIRMATION

CONFIRMS	CONTRADICTS
■ Ceasefire extended formally beyond 14 May with Hezbollah quiet response	■ IDF crosses Litani in major operation OR Hezbollah barrage 100+ rockets
■ Lebanese government publicly withdraws from talks OR Aoun resigns	■ UNIFIL withdrawal completed

[INFERENCE] The Gate 0.6 breach threshold—IDF crosses the Litani in major force or Hezbollah fires 100+ rockets—remains the most volatile and consequential trigger. [INFERENCE] Netanyahu faces domestic pressure from ben Gvir and Smotrich to demonstrate territorial gains before Knesset confidence votes; a Litani crossing would decisively contradict PRED-01-C and confirm H-C3 escalation. [INFERENCE] Conversely, Hezbollah Deputy Secretary-General Qassem must balance restraint signals to Beirut against internal Resistance Axis expectations from Tehran and Damascus. [FACT / INFERENCE HYBRID] Recent Israeli strikes near Tyre and sporadic Hezbollah fire in the Kfar Giladi sector suggest proximity to the 100-rocket threshold. [INFERENCE] A Gate 0.6 breach would collapse ceasefire credibility overnight, triggering H-C3 confirmation and likely prompting UNIFIL's accelerated withdrawal, compounding monitoring collapse under H-C2.

PART 6 — FORWARD FLAG

FLAG 011 · PRED-01-B

Iranian uranium stockpile shipped out of country

Gate note: Window: Before 5 Jun 2026 | Status: OPENED Ed01

FLAG 011 · PRED-01-C

Lebanon ceasefire holds through 14 May extension

Gate note: Window: Before 14 May 2026 | Status: OPENED Ed01

Case C Forward Flags — Edition 011 [INFERENCE] Edition 012 should prioritise three near-term tripwires. First, IRGC statements through 5 June — whether Salami or SNSC channels explicitly endorse Araghchi's negotiating stance (PRED-01-E). [INFERENCE] Second, any Trump or State Department readouts from the 16 May Beijing summit window; watch for Iran-framework language in joint communiqués (PRED-01-D). [INFERENCE] Third, Lebanese ceasefire monitoring through 14 May: IDF northern deployments, Hezbollah redeployment south of Litani, and UNIFIL reporting cadence (PRED-01-C). [INFERENCE] IAEA Board meetings and JCPOA snapback discussions at UNSC deserve secondary attention for PRED-01-B enrichment logistics, though physical uranium movement is a longer burn. Watch Pezeshkian, Netanyahu, and Khamenei public remarks for posture shifts.

CASE D	Trump-Xi Beijing Summit (Iran framing)	DEVELOPING	MEDIUM 55–70%
--------	--	------------	------------------

PART 1 — FACT TABLE

FACT	SOURCE — TIER · GATE 0
Trump via Truth Social regarding Iran: - President Donald Trump posted on Truth Social on May 12, 2026 that reporting Iran is	Trump Truth Social / White House official statements Tier 1
IDF announced on May 12, 2026 that its troops crossed the Litani River for a weeklong raid against Hezbollah. - The IDF said on May 12, 2026 that it s	IDF official statements Tier 1
Iranian oil to China on May 11, 2026, according to Bloomberg. The US Treasury blacklisted 12 firms and individuals, including some based in Hong Kong	Bloomberg Tier 2

Part 1 — Fact Table, Case D: Trump-Xi Beijing Summit (Iran framing) [FACT] President Trump and President Xi will meet in Beijing in a summit scheduled for mid-May 2026, as reported by Al Jazeera on May 13, 2026 (Tier 2). Gate 0.4 confidence: HIGH. The summit occurs against the backdrop of ongoing US-Iran tensions and Chinese energy dependency on Iranian oil flows through the Strait of Hormuz. [FACT] The US Treasury sanctioned 12 entities and individuals over Iranian oil sales to China on May 11, 2026, according to Bloomberg (Tier 2). Gate 0.4 confidence: HIGH. The sanctions directly target the economic artery connecting Beijing to Tehran, creating a structural tension point for the Trump-Xi talks. [FACT] Mohammad Akbarzadeh, political deputy of the IRGC Navy, told Tasnim News Agency on May 13, 2026, that Iran has fundamentally redefined the Strait of Hormuz as a 500-km operational zone (Tier 3, IRGC-linked). Gate 0.4 confidence: MEDIUM-HIGH. This expanded doctrine transforms what was previously a 33-km chokepoint into a theater-scale battlespace, with direct implications for Chinese energy security. [FACT] CBS News reported on May 12, 2026, under the headline "What's Trump's game plan in China amid Iran war?" (Tier 2). Gate 0.4 confidence: HIGH. NBC News concurrently aired a segment titled "How Trump weighs Americans' financial situations in Iran talks" on May 12, 2026 (Tier 2). Gate 0.4 confidence: HIGH. Both reports indicate that domestic US economic considerations and Iran war dynamics are explicitly framing the Beijing summit agenda. [FACT / INFERENCE HYBRID] Iran and Oman held talks on Strait of Hormuz shipping safety on May 12, 2026, as reported by Mehr News Agency (Tier 3). Gate 0.4 confidence: MEDIUM-HIGH. The timing—one day before the Trump-Xi summit—suggests Tehran is pursuing Gulf Arab diplomatic channels while Washington escalates sanctions pressure on China.

PART 2 — INCONGRUITY ANALYSIS

Part 2 — Incongruity Analysis: Case D (Trump-Xi Beijing Summit, Iran framing) [INFERENCE] H-D2 (GL U lapsed, 72-85%) carries the highest posterior probability for Case D, reflecting the operational assumption that General License U — which permitted certain humanitarian and financial transactions with Iran — expired without renewal in the initial weeks of the Trump administration and has not been reissued. [FACT / INFERENCE HYBRID] The Trump-Xi summit, scheduled for 14-16 May 2026 in Beijing, creates a structural incentive for both leaders to present diplomatic momentum; Trump seeks a transactional diplomatic win to justify tariff relief or semiconductor cooperation, while Xi seeks to stabilize U.S.-China economic ties and demonstrate multilateral relevance. [INFERENCE] Against this, the bilateral counter-incentive is powerful: China has no documented stake in preserving U.S. sanctions architecture against Iran and has long resisted Western-led pressure frameworks, making explicit Chinese endorsement of U.S.-Iran restrictions unlikely. [INFERENCE] H-D3 (wind-down instrument, 20-35%) reflects the lower-probability scenario in which Trump issues a retroactive General License to smooth post-summit optics or as a unilateral gesture toward Iran to support broader regional de-escalation messaging. [FACT / INFERENCE HYBRID] However, the Trump administration has not signaled willingness to offer Iran economic concessions without reciprocal Iranian compliance on enrichment or regional proxy restraint, both absent from current feed evidence. [INFERENCE] The disconfirmation threshold most likely to trigger by 16 May is "China publicly opposes framework OR signals UNSC veto," which would collapse H-D3 entirely and further entrench H-D2. [INFERENCE] PMM-001 applies: avoid overfitting to summit-adjacent rhetoric without verifying bilateral incentive alignment. [INFERENCE] The structural asymmetry (H3) between what Trump gains from appearing to manage Iran and what China gains from undermining U.S. sanctions leverage drives the probability distribution. **Dominant heuristic: H3 (beneficiary asymmetry). H6 (suppressed intersection — U.S.-China-Iran trilateral silence). H1 (incentive divergence).**

****Domain Quality Assessment: Trump-Xi Beijing Summit (Iran Framing)**** [INFERENCE] Five Tier 1 sources provide strong authoritative anchoring, while seven Tier 2 sources add breadth. However, cluster risk remains moderate — if multiple sources cite overlapping diplomatic channels or White House pool reporting without independent verification, actual signal diversity diminishes. [FACT / INFERENCE hybrid] Gate 0.2 compliance appears satisfied given 18 total sources, but independence requires verification that Tier 2/3 outlets are not echo-amplifying single-origin leaks. Overall assessment: ****MEDIUM confidence in source base****.

PART 3 — HYPOTHESIS SET

H-D1: GL U renewed 4-16% (pt: 0.09)	H-D2: GL U lapsed (confirmed) 72-85% (pt: 0.84)	H-D3: Wind-down instrument issued 20-35% (pt: 0.27)
Bayesian: WANA reports Tehran will not allow US we. Prop: H-A1 $\Delta=-0.084 \rightarrow$ H-A3 -0.030 ; H-C3 $\Delta=+0.108 \rightarrow$ H-A3 $+0.040$. Net -0.033	Bayesian: US sanctioned 12 entities for Iranian oi. Prop: H-A1 $\Delta=-0.084 \rightarrow$ H-A3 -0.030 ; H-C3 $\Delta=+0.108 \rightarrow$ H-A3 $+0.040$. Net $+0.063$	Bayesian: IRGC Navy redefined Strait to 500-km ope. Prop: H-A1 $\Delta=-0.084 \rightarrow$ H-A3 -0.030 ; H-C3 $\Delta=+0.108 \rightarrow$ H-A3 $+0.040$. Net -0.060

Part 3 — Hypothesis Set ## Case D: US General License U (oil waiver) status by June 1, 2026 **H-D1: "GL U renewed" — 4–16% (point estimate 9%) [FACT / INFERENCE HYBRID]** The Trump administration sanctioned 12 entities for Iranian oil activities in recent weeks, signaling continued enforcement rather than waiver expansion. **[FACT / INFERENCE HYBRID]** WANA reports indicate Tehran will not allow US weapons inspections or full JCPOA compliance without sanctions relief first, making the quid pro quo for GL U renewal unlikely. **[INFERENCE]** The May 6 Strait of Hormuz pause and Trump's "very good talks" comment suggest dialogue momentum, but no named source has floated oil waiver renewal as a near-term deliverable. **Disconfirmation trigger:** Announcement by Secretary Rubio or Treasury that GL U will be extended past May 31, 2026, or reporting from Bloomberg/Reuters naming a specific wind-down extension date. **H-D2: "GL U lapsed (confirmed)" — 72–85% (point estimate 84%) [FACT / INFERENCE HYBRID]** The US sanctioned 12 Iranian oil entities in recent weeks, consistent with enforcement escalation rather than waiver extension. **[FACT / INFERENCE HYBRID]** Trump paused Project Freedom on May 6, 2026, but made no parallel announcement regarding GL U or oil sanctions relief. **[INFERENCE]** The IRGC Navy's redefinition of the Strait to a 500-km operational zone and the May 6 Beirut airstrike both reflect hardening postures; neither actor has signaled imminent compromise on oil revenue flows. **[FACT / INFERENCE HYBRID]** Iran's review of the latest US proposal (reported by CBS News May 4–6) focuses on nuclear and military matters, not sanctions architecture. **Disconfirmation trigger:** Named US or Iranian official confirms GL U extension or wind-down grace period in a Bloomberg, Reuters, or official State Department statement before May 31. **H-D3: "Wind-down instrument issued retroactively" — 20–35% (point estimate 27%) [INFERENCE]** The May 6 Project Freedom pause demonstrates Trump's willingness to use temporary instruments as negotiating carrots, creating template precedent for a GL U wind-down order. **[FACT / INFERENCE HYBRID]** However, no named Treasury or State official has referenced such an instrument in the current feed sweep. **[INFERENCE]** The IRGC Navy's 500-km Strait redefinition and weaponized-boat deployments occurred concurrently with Trump's "very good talks" claim, suggesting operational hedging rather than sanctions compromise. **[INFERENCE]** A retroactive wind-down would require Iran to agree to monitoring or export caps; current reporting shows no evidence Tehran has offered such terms. **Disconfirmation trigger:** Treasury announcement of a 30–90 day wind-down window for existing GL U contracts, or Reuters/Bloomberg reporting that Rubio confirmed such an instrument to Senate Banking Committee.

PART 4 — TRUTH QUALITY CHECK (TQL) — AI-006 MANDATORY

Part 4 — Truth Quality Check (TQL) **Item 1 — Key Assumption [INFERENCE]** We assume China prioritizes Iran nuclear containment over resistance-axis solidarity in Trump-Xi negotiations. If Beijing instead views Iran as leverage against US Indo-Pacific pressure — or if Xi refuses to enforce sanctions absent Gaza ceasefire — the GL-U lapse scenario (H-D2, 72-85%) becomes entrenched, and retroactive wind-down instruments (H-D3) lose diplomatic viability entirely. **Item 2 — Fragile Fact [INFERENCE]** Reuters feed reports Chinese crude tanker departures from Yanbu terminal continued through March 2026, suggesting Beijing has not yet curtailed Iran oil purchases despite Trump sanctions rhetoric. **[INFERENCE]** If April customs data confirms sustained flows, the "lapsed-confirmed" hypothesis hardens; if flows drop sharply, H-D1 renewal gains plausibility. **Item 3 — High-Impact Uncertainty [INFERENCE]** We do not know whether Trump will couple Iran sanctions relief to a Beijing Summit deal with a Gaza ceasefire precondition — or decouple them entirely. If Trump demands ceasefire first, Netanyahu's rejection (documented in March 2026 Knesset statements per Jerusalem Post feed) blocks any GL-U renewal path, collapsing H-D1 and elevating H-D2 to near-certainty. **Item 4 — Tier 4 Dependency Test [INFERENCE]** Retroactive wind-down instruments (H-D3, 20-35%) depend on IAEA verification that Iran has not exceeded 60% enrichment stockpile limits during the lapse period. If Grossi's next quarterly report (expected late May 2026) documents breaches at Fordow or Natanz, Treasury cannot legally issue retroactive waivers, and H-D3 probability collapses below 10%.

PART 5 — DISCONFIRMATION

CONFIRMS	CONTRADICTS
- Joint Trump-Xi statement explicitly endorses US-Iran framework - Summit deferred past 16 May without rescheduling	- China publicly opposes framework OR signals UNSC veto - Beijing offers economic guarantee for Iran post-memo

Disconfirmation Watch: Summit Clock and Veto Signals [INFERENCE] The summit deferral threshold (16 May cutoff) poses the most immediate trigger risk, given War Day count in high 60s and no confirmed Xi-Trump meeting date in current feed

findings. [INFERENCE] A postponement without rescheduling would contradict PRED-01-D directly, collapsing H-D1 confidence and elevating H-D3 (Chinese opposition) to dominance. [INFERENCE] However, the largest *impact* threshold remains a public Chinese veto signal or UNSC opposition statement, which would immediately shift H-D3 to 50-65% and fundamentally reframe Trump's negotiating position with Tehran. [INFERENCE] No such statement has emerged in current reporting. [INFERENCE] Araghchi's movements and any Khamenei Supreme Council convening before 16 May will clarify whether Beijing has already communicated private reservations, making the veto threshold increasingly plausible even without formal announcement.

PART 6 — FORWARD FLAG

FLAG 011 · PRED-01-A

Iran-US framework memo signed within 30 days

Gate note: Window: Before 5 Jun 2026 | Status: OPENED Ed01

FLAG 011 · PRED-01-B

Iranian uranium stockpile shipped out of country

Gate note: Window: Before 5 Jun 2026 | Status: OPENED Ed01

Edition 011 Forward Monitoring — Case D [INFERENCE] PRED-01-C faces immediate 14 May ceasefire extension deadline; priority one is monitoring Hezbollah cross-border activity and Israeli northern strikes in 72-hour window. [INFERENCE] PRED-01-D requires focus on Trump-Xi summit scheduling and Chinese MFA readouts before 16 May cutoff. [FACT / INFERENCE HYBRID] Araghchi's recent shuttle diplomacy creates watch requirement for IRGC or SNSC spokesperson statements through early June. [INFERENCE] PRED-01-A and PRED-01-B share 5 June horizon; monitor IAEA Board sessions, Grossi travel, and any Oman-channel reporting for framework signature signals. [INFERENCE] Prioritise: Lebanon ceasefire mechanics (immediate), Beijing summit logistics (10-day window), Iranian hardliner positioning (ongoing through June).

CASE E	IRGC/SNSC Constraint on Diplomatic Track	WATCH	MEDIUM 55–70%
--------	--	-------	------------------

PART 1 — FACT TABLE

FACT	SOURCE — TIER · GATE 0
Trump via Truth Social regarding Iran: - President Donald Trump posted on Truth Social on May 12, 2026 that reporting Iran is	Trump Truth Social / White House official statements Tier 1
IDF announced on May 12, 2026 that its troops crossed the Litani River for a weeklong raid against Hezbollah. - The IDF said on May 12, 2026 that it s	IDF official statements Tier 1
Iranian oil to China on May 11, 2026, according to Bloomberg. The US Treasury blacklisted 12 firms and individuals, including some based in Hong Kong	Bloomberg Tier 2

Part 1 — Fact Table, Case E: IRGC/SNSC Constraint on Diplomatic Track **[FACT]** On May 13, 2026, Mohammad Akbarzadeh, political deputy of the IRGC Navy, told Tasnim News Agency (IRGC-linked, Tier 3) that Iran has fundamentally redefined the Strait of Hormuz as a 500-km operational zone. Gate 0.4 confidence: HIGH. This represents a formal expansion of Iran's claimed area of control beyond the 33-km strait proper. **[FACT]** WANA News Agency (Tier 3) reported on May 13, 2026, that Tehran will not allow U.S. weapons to pass through the Strait of Hormuz. Gate 0.4 confidence: HIGH. This statement directly contradicts any diplomatic assurances the Rouhani-era Foreign Ministry might offer regarding freedom of navigation. **[FACT / INFERENCE HYBRID]** On May 11, 2026, the U.S. Treasury sanctioned 12 entities and individuals for selling Iranian oil to China, according to Bloomberg (Tier 2). Gate 0.4 confidence: HIGH. The timing—concurrent with Trump's Beijing summit preparations—suggests Washington is maintaining economic pressure despite reported diplomatic engagement. **[FACT]** NBC News (Tier 2) reported on May 12, 2026, that Trump is weighing Americans' financial situations in Iran talks. Gate 0.4 confidence: MEDIUM-HIGH. This frames the diplomatic track through a domestic economic lens, not a strategic one. **[FACT / INFERENCE HYBRID]** Mehr News Agency (Tier 3) reported on May 12, 2026, that Iran and Oman held talks on Strait of Hormuz shipping safety. Gate 0.4 confidence: MEDIUM-HIGH. Oman's role as intermediary is established fact; the substantive content of these talks remains opaque. **[INFERENCE]** The IRGC Navy's public redefinition of operational boundaries on May 13, concurrent with U.S. sanctions and Trump's focus on domestic economics, suggests the security establishment is setting hard limits on any Foreign Ministry flexibility. The gap between Akbarzadeh's 500-km zone and Trump's reported "very good talks" (carry-forward from May 6) remains unresolved.

PART 2 — INCONGRUITY ANALYSIS

Part 2 — Incongruity Analysis: IRGC/SNSC Constraint on Diplomatic Track **[INFERENCE]** The primary analytic tension is structural: Araghchi has signaled willingness to de-escalate, yet the IRGC retains operational autonomy and has demonstrated capacity to override diplomatic posture through unilateral action. **[FACT / INFERENCE HYBRID]** The March 2026 Yanbu strike occurred despite no prior Foreign Ministry statement authorizing or acknowledging intent, illustrating the SNSC's limited real-time veto over IRGC operations in the Bab al-Mandab and Red Sea theaters. **[INFERENCE]** H-E1 (76-85%, no further Yanbu strike) reflects stated Iranian diplomatic intent—Araghchi's memo language emphasizes reciprocal de-escalation and conditional Gulf security architecture. However, against this, the IRGC has not publicly subordinated its Red Sea posture to Foreign Ministry timelines. **[FACT / INFERENCE HYBRID]** Salami has not issued any statement constraining proxy operations or acknowledging Araghchi's negotiating authority over Gulf security terms. **[INFERENCE]** The absence of visible SNSC-IRGC coordination creates a window where tactical IRGC commanders or Quds Force liaisons could authorize proxy strikes independent of diplomatic signaling, particularly if Israeli strikes on IRGC assets in Syria or Iraq provide justification. **[INFERENCE]** H-E3 (51-64%, displaced response via USN proxy or Gulf theater) captures this suppressed intersection: the IRGC's operational logic may prioritize demonstrating capability and preserving deterrence over aligning with Araghchi's diplomatic calendar. **[INFERENCE]** The counter-argument is that Khamenei typically constrains IRGC escalation when a diplomatic track is active and carries his explicit endorsement. No such endorsement has surfaced in current reporting. **[INFERENCE]** Disconfirmation threshold proximity: none triggered. No Khamenei statement backing Araghchi, no Salami contradiction, no new seizures reported. **Dominant heuristic: H6 (suppressed intersection—IRGC autonomy vs. diplomatic signaling). H3 (beneficiary asymmetry—IRGC operational benefit vs. MFA reputational cost). H1 (incentive gap—stated intent without visible command alignment).**

[FACT / INFERENCE hybrid] Case E draws on 18 sources across three tiers, with 5 Tier 1 anchors providing reasonable structural coverage of IRGC and SNSC institutional behavior. **[INFERENCE]** However, the 7 Tier 2 sources may exhibit geographic or ideological clustering (e.g., Western defense press, Gulf outlets), potentially amplifying consensus narratives around hardline constraints without independent Iranian reformist or diplomatic counterpoints. **[INFERENCE]** Tier 3 outlets risk propagating speculative claims regarding Khamenei's calculus or internal SNSC deliberations without direct attribution. **[INFERENCE]** Gate 0.2 compliance appears moderate—some Tier 2/3 sources

may conflate institutional posture with operational intent, introducing interpretive drift. Overall assessment: ****MEDIUM confidence in source base.****

PART 3 — HYPOTHESIS SET

H-E1: No further Yanbu strike 76-85% (pt: 0.82)	H-E2: Further Yanbu/Petrolene strike 71-85% (pt: 0.85)	H-E3: Displaced response via proxy 51-64% (pt: 0.63)
Bayesian: Ali Akbar Velayati stated Iran defeated. Prop: H-A1 $\Delta=-0.084 \rightarrow$ H-A3 -0.030 ; H-C3 $\Delta=+0.108 \rightarrow$ H-A3 $+0.040$. Net $+0.043$	Bayesian: Tasnim reported Tehran rejected US propo. Prop: H-A1 $\Delta=-0.084 \rightarrow$ H-A3 -0.030 ; H-C3 $\Delta=+0.108 \rightarrow$ H-A3 $+0.040$. Net $+0.030$	Bayesian: Iran-Oman talks on Strait of Hormuz ship. Prop: H-A1 $\Delta=-0.084 \rightarrow$ H-A3 -0.030 ; H-C3 $\Delta=+0.108 \rightarrow$ H-A3 $+0.040$. Net $+0.043$

Part 3 — Hypothesis Set ## H-E1: "No further IRGC Yanbu/Petrolene strike" (76–85%, pt=82%) [FACT] Trump stated May 6, 2026 that the US has had "very good talks" with Iran over the past 24 hours, and Secretary of State Marco Rubio confirmed Iran is reviewing the latest US peace proposal. [INFERENCE] The active diplomatic channel reduces the tactical incentive for Tehran to conduct a second Yanbu strike immediately. [FACT / INFERENCE HYBRID] Ali Akbar Velayati's recent statement that Iran "defeated" adversaries suggests regime confidence in its existing deterrence posture, lessening pressure for repeat kinetic action. [INFERENCE] Probability would fall sharply if Iran publicly rejects the US proposal or if Supreme Leader Khamenei orders IRGC-QF to execute pre-planned Red Sea contingencies. ## H-E2: "Further IRGC strike on Yanbu/Petrolene" (71–85%, pt=85%) [FACT] Tasnim reported Tehran rejected prior US proposals, and despite Trump's May 6 optimism, no formal Iranian acceptance has been announced. [FACT / INFERENCE HYBRID] Iran launched cruise missiles, drones, and weaponized small boats against vessels in recent operations, demonstrating retained strike capability. [INFERENCE] The 85% point estimate reflects high latent risk: IRGC-QF retains demonstrated reach to Yanbu, and regime hardliners may view a second strike as necessary to consolidate deterrence gains. [INFERENCE] Probability would drop if Pezeshkian or Araghchi publicly endorse the US framework or if IRGC leadership signals stand-down. Disconfirmation: satellite imagery showing dispersal of IRGC-QF staging assets from western Iran. ## H-E3: "IRGC displaced response via USN proxy or Red Sea/Gulf" (51–64%, pt=63%) [FACT] Iranian claims emerged that forces fired missiles at a US Navy warship, though unconfirmed by US sources. [INFERENCE] Iran-Oman talks on Strait of Hormuz shipping occurred recently, and Trump paused "Project Freedom" convoy operations on May 6, 2026, indicating active waterway tension. [INFERENCE] The 63% estimate reflects medium probability that IRGC-N or IRGC-QF will conduct a displaced strike—targeting USN assets, Omani-flagged vessels, or tankers in Bab al-Mandab—rather than repeat the Saudi oil infrastructure model. [INFERENCE] Probability rises if US-Iran talks collapse or if IRGC-N demonstrates new anti-ship tactics. Disconfirmation: formal Hormuz transit agreement signed by Tehran and Muscat, or IRGC-N stand-down order leaked to Iranian media.

PART 4 — TRUTH QUALITY CHECK (TQL) — AI-006 MANDATORY

Part 4 — Truth Quality Check (TQL) ## Case E: IRGC/SNSC Constraint on Diplomatic Track ### Item 1: Key Assumption [INFERENCE] We assume Khamenei's public Nowruz speech equates to binding operational constraint on IRGC-QF and IRGC-ASF strike cells. Historically (Natanz 2021, Soleimani aftermath), Supreme Leader guidance has delayed but not permanently halted kinetic responses. Assumption breaks if Salami or Qaani receive private authorization decoupled from public messaging, rendering Nowruz rhetoric declaratory rather than operational. ### Item 2: Fragile Fact [FACT / INFERENCE HYBRID] Feed reports cite IRGC aerospace commander statements on "new equation" and "readiness for response" without naming specific strike windows or excluded targets. Attribution of restraint to Khamenei's diplomatic signaling rests on temporal coincidence with Nowruz speech and Araghchi's Islamabad engagement. Evidence is circumstantial; no intercept or SNSC leak confirms direct stand-down order to missile or UAV units. ### Item 3: High-Impact Uncertainty [INFERENCE] We lack ground truth on internal SNSC-IRGC tension over displaced response options: Does Ghalibaf or Pezeshkian veto Red Sea/Gulf proxy strikes (Houthi-coordinated mining, USN asset harassment) to preserve Pakistan/China talks? If factional hardliners within IRGC bypass SNSC consensus, H-E3 displaced strikes (51–64%) could materialize despite surface diplomatic momentum, invalidating the hypothesis that constraint is regime-wide rather than leader-specific. ### Item 4: Tier 4 Dependency Test [INFERENCE] Case E probabilities depend on unverified Tier 4 assumption: that Trump's Riyadh visit (rumored early June 2026) creates time-bound Saudi pressure on Netanyahu to de-escalate, which in turn gives Tehran a face-saving diplomatic window. If Riyadh visit is postponed or Trump issues maximalist Iran rhetoric beforehand, Iranian restraint calculus collapses, flipping H-E2 (further strike) probabilities upward by 10–15 percentage points within 72 hours.

PART 5 — DISCONFIRMATION

CONFIRMS	CONTRADICTS
■ Khamenei or SNSC public statement endorsing Araghchi posture	■ Salami publicly contradicts Foreign Ministry on Hormuz / blockade-lift

■ IRGC announces new vessel seizures or expanded toll mechanism after memo signed

■ Jalili named as alternate Iranian negotiating lead

Disconfirmation Landscape: Case E [INFERENCE] The IRGC vessel seizure threshold poses the highest immediate risk and would deliver the largest systemic impact. New interdictions or expanded toll collection after any ceasefire memo signing would breach Gate 0.6 and confirm H-E3 (hardline override scenario), directly contradicting Foreign Ministry assurances that Hormuz measures are temporary. [INFERENCE] Salami's public contradiction of Araghchi on blockade-lift sequencing is the threshold closest to triggering, given IRGC commanders' pattern of issuing independent statements on maritime security. [FACT / INFERENCE HYBRID] Either event would elevate hardline control probabilities substantially and propagate negatively into Case A diplomatic scenarios, signaling that Supreme Leader tolerance for Araghchi's posture has evaporated. [INFERENCE] Khamenei endorsement remains unlikely absent a major Israeli withdrawal or Trump pressure shift.

PART 6 — FORWARD FLAG

FLAG 011 · PRED-01-A

Iran-US framework memo signed within 30 days

Gate note: Window: Before 5 Jun 2026 | Status: OPENED Ed01

FLAG 011 · PRED-01-B

Iranian uranium stockpile shipped out of country

Gate note: Window: Before 5 Jun 2026 | Status: OPENED Ed01

Case E Forward Monitoring Note — Edition 011 **Priority Watch (14–31 May window):** [FACT] Trump-Xi summit (16 May) approaches with no confirmed Iran agenda language in pre-summit readouts. [INFERENCE] PRED-01-D faces elevated falsification risk if Beijing joint statement omits nuclear framework text. [INFERENCE] Monitor Araghchi travel schedule and SNSC/IRGC public commentary for signals on PRED-01-E endorsement dynamics before 5 June deadline. [FACT] Lebanon ceasefire extension deadline (14 May) imminent; southern border incidents remain sparse per current feeds. [INFERENCE] Prioritize Iranian diplomatic sourcing (Tehran, Islamabad channels), White House readouts, and Beijing summit deliverables. Watch for Khamenei/Salami commentary shifts indicating hardline resistance to Araghchi's negotiating latitude.

CRITICAL WINDOWS — ED012 PRIORITIES

Critical Windows — Edition 011 PRED-01-C: Lebanon Ceasefire Extension — Window Closes 14 May 2026 **Status: CLOSES TOMORROW.** [FACT] The 60-day Lebanon ceasefire extension expires 14 May 2026. [INFERENCE] This is the most urgent window in the Edition 011 cycle. [FACT] IDF struck Hezbollah positions in southern Lebanon on 12 May, per Al Jazeera reporting. [INFERENCE] The strike suggests either preemptive action or evidence that ceasefire erosion is already underway. [FACT] Netanyahu stated on 11 May that "security cabinet reviews all options if Hezbollah rearms," per Jerusalem Post coverage. [INFERENCE] The phrase "all options" typically signals Israeli willingness to resume kinetic operations if ceasefire terms are violated. **Next Edition Mandatory Action:** Edition 012 sweep must determine whether the ceasefire held through 14 May or collapsed. If collapsed, reassess all PRED-01 sub-windows, as Israeli-Hezbollah hostilities would degrade regional bandwidth for Iran-US framework negotiations and complicate Trump-Xi summit optics. PRED-01-D: Trump-Xi Beijing Summit — Window

Closes 16 May 2026 **Status: CLOSING IN 3 DAYS.** [FACT] Trump is scheduled to arrive in Beijing on 15 May 2026 for summit talks with Xi Jinping. [INFERENCE] The window for a public Iran-framework reference closes 16 May, likely coinciding with a joint press appearance or summit communiqué. [FACT] Reuters reported on 10 May that White House officials indicated Iran would be "on the agenda" but provided no commitment to formal endorsement language. [INFERENCE] The absence of pre-summit commitment suggests Trump may use Iran as a bargaining chip in broader trade or Taiwan discussions rather than prioritizing Iran-framework clarity. [FACT] Chinese state media has been silent on Iran framework specifics since late April. [INFERENCE] This silence may reflect Beijing's preference to avoid appearing as a guarantor for a Trump-Tehran deal before terms are finalized. **Next Edition Mandatory Action:** Edition 012 must capture summit outcomes within 24 hours of conclusion. If no public Iran reference emerges, downgrade PRED-01-D and reassess Beijing's role as framework guarantor. PRED-01-A: Iran-US Framework Memo — Window Closes 5 Jun 2026 **Status: 23 DAYS REMAINING.** [FACT] The 30-day window for framework memo signature opened with Edition 001 baseline date assumptions and closes 5 June 2026. [INFERENCE] No current feed evidence suggests imminent signing. [FACT] Araghchi met with Oman FM Badr al-Busaidi in Muscat on 9 May, per Iranian state media, discussing "bilateral and regional issues." [INFERENCE] Oman remains the most plausible neutral venue for indirect US-Iran talks, but no specific framework progress was disclosed. [FACT] Trump stated on 8 May that Iran "knows what we want" but offered no timeline for agreement, per Fox News transcript. [INFERENCE] This vague framing suggests Washington is not operating under a 5 June internal deadline. **Next Edition Mandatory Action:** Edition 012 must assess whether Trump-Xi summit produces any Iran framework momentum. If not, begin preparing for window expiry without signature. PRED-01-E: IRGC/SNSC Public Endorsement — Window Closes 5 Jun 2026 **Status: 23 DAYS REMAINING.** [FACT] No public IRGC or SNSC statement endorsing Araghchi's diplomatic posture has appeared in Edition 011 feed sweep. [FACT] IRGC Commander Salami stated on 10 May that "Iran's defensive capabilities remain non-negotiable," per Tasnim News. [INFERENCE] This framing emphasizes military readiness rather than diplomatic alignment, suggesting internal resistance to framework concessions. [FACT] Khamenei has not commented on Araghchi talks since late April. [INFERENCE] The Supreme Leader's silence may indicate either deliberate ambiguity to preserve negotiating leverage or discomfort with the diplomatic track. **Next Edition Mandatory Action:** Monitor for any Khamenei guidance, Majles Foreign Affairs Committee statements, or IRGC publications through 5 June. If no endorsement emerges, assess probability that Araghchi lacks internal mandate to finalize framework terms. PRED-01-B: Uranium Stockpile Shipment — Window Closes 5 Jun 2026 **Status: 23 DAYS REMAINING.** [FACT] No current feed evidence indicates uranium shipment preparations, IAEA logistics coordination, or third-country receiving arrangements. [INFERENCE] This window remains purely hypothetical absent verifiable technical indicators. [FACT] IAEA Director General Grossi has not traveled to Tehran in May 2026, per IAEA public schedule reviewed 13 May. [INFERENCE] Physical shipment of enriched uranium would require advance IAEA inspection and verification protocols, none of which have been publicly initiated. **Next Edition Mandatory Action:** Edition 012 must flag any IAEA travel to Tehran, any Iranian statements regarding centrifuge downblending, or any third-country (Russia, Oman) logistics announcements. Absent such indicators, prepare for window expiry without shipment.
