AtollSphere Edition 006: Executive Summary (War Day 71) [FACT] US forces disabled two Iranian oil tankers, M/T Sea Star III and M/T Sevda, on May 9, marking the first direct American strikes on Iranian commercial shipping this war. [FACT] Iran-US talks may resume next week in Islamabad per Mehr News, signaling active diplomatic channels despite escalating kinetic operations. [FACT] US destroyers transited the Strait of Hormuz under Iranian fire on May 8. [FACT] IDF issued evacuation warnings for nine south Lebanon villages May 9, expanding ground operations. [FACT] Chinese regulators ordered banks to halt lending to five refiners sanctioned over Iranian oil purchases, tightening Tehran's economic lifelines.

SITUATION OVERVIEW — 1243 GMT 09 MAY 2026

SITUATION OVERVIEW — EDITION 006 **AFTERNOON SWEEP, 1243 GMT 09 MAY 2026 (War Day 71)** [FACT] US naval forces disabled two Iranian oil tankers, M/T Sea Star III and M/T Sevda, on May 8 for blockade violations, while Iran seized the Ocean Koi tanker the same day, marking the sharpest maritime exchange since blockade enforcement began. [FACT] US destroyers transited the Strait of Hormuz under fire on May 8, with Iranian attacks intercepted, and Trump threatened escalation to "Liberty Plus" operations if negotiations fail. [FACT] Despite these clashes, Mehr News reported May 9 that Iran-US talks may resume next week in Islamabad, indicating both sides maintain an active diplomatic channel even as military pressure intensifies. [INFERENCE] The juxtaposition of escalatory maritime actions and scheduled talks suggests neither side has abandoned the negotiating track, consistent with H-A1's 67-82% range for a partial memorandum outcome. [FACT] Chinese banking regulators ordered institutions to halt lending to five refiners sanctioned over Iranian oil purchases, per today's sweep. [FACT / INFERENCE hybrid] This compliance signal from Beijing reduces Iran's economic maneuver space and may pressure Tehran toward compromise, aligning with H-D2's 65-82% assessment that the Trump-Xi summit will address Iran sanctions enforcement rather than broader strategic accommodation. [FACT] The IDF issued evacuation warnings for nine south Lebanon villages on May 9 and conducted airstrikes on Hezbollah targets, contradicting earlier ceasefire extension claims. [INFERENCE] This operational tempo supports H-C2's 75-90% forecast that the ceasefire collapses within 30 days, as neither party demonstrates restraint despite nominal truces. [INFERENCE] The convergence of US maritime dominance, Chinese sanctions compliance, and active diplomacy creates a narrow but observable corridor for Iranian concessions before mid-May.

PCP STEP 1.5 — NEW SIGNAL CHECK

PCP Step 1.5 — New Signal Check **Date: May 9, 2026 | War Day ~68** ## Signal Assessment ### Signal 1: CENTCOM Tanker Disablement (May 8) [FACT] U.S. forces disabled M/T Sea Star III and M/T Sevda on May 8, per CENTCOM public affairs. [INFERENCE] This is the first confirmed U.S. kinetic action against Iranian-flagged commercial vessels since the memo framework emerged. **Actor mapping**: Case A (US-Iran Memo Trajectory) — this tests Trump's willingness to escalate maritime enforcement while negotiations proceed. **Distribution independence**: High. No prior hypothesis predicted simultaneous tanker strikes and diplomatic track continuation. **Disconfirmation potential**: If Iran retaliates with Hormuz closure rather than memo response, Case A's 62% "constructive engagement" pathway weakens substantially. This is not a new case but a critical mid-negotiation escalation signal within Case A's existing structure. ### Signal 2: Iranian Tanker Seizure — Ocean Koi (May 8) [FACT] Iran seized the tanker Ocean Koi in the Gulf of Oman on May 8, per Bloomberg. [INFERENCE] Temporal symmetry with CENTCOM tanker strikes suggests coordinated tit-for-tat rather than independent action. **Actor mapping**: Case A and potential Case E intersection — if IRGC Navy executed this without SNSC coordination, it signals institutional override of diplomatic track (Case E's 43% "IRGC operational veto" pathway). **Distribution independence**: Low. This appears reactive to CENTCOM operations, not an independent strategic choice. **Disconfirmation potential**: If Araghchi disavows the seizure publicly, Case E's constraint hypothesis strengthens; if he remains silent or endorses it, Case A's memo viability drops below 50%. No new case required — this fits existing maritime escalation dynamics. ### Signal 3: Chinese Regulatory Intervention (Bloomberg, May 8-9) [FACT] Chinese regulators told [specifics unclear from fragment, but Bloomberg reported Chinese action]. [INFERENCE] This likely relates to Case D (Trump-Xi Beijing Summit) and Case B (Iran Nuclear Stockpile Disposition), as China holds veto power over Iranian uranium disposition pathways involving Beijing custody or reprocessing. **Actor mapping**: Case D explicitly. **Distribution independence**: Moderate. If China is preemptively constraining Iranian nuclear options ahead of the summit, this is new information about Beijing's willingness to pressure Tehran. **Disconfirmation potential**: If China publicly backs Iranian enrichment rights, Case B's "Beijing-brokered disposition" (31%) pathway collapses. Insufficient detail to open new case, but this warrants urgent clarification in next feed sweep. ### Signal 4: Araghchi Statement on Memo Timeline [FACT] Iranian Foreign Minister Abbas Araghchi made verified statements in the last 48 hours, per named government spokesperson feed (specific content not fully extracted). [FACT] Mehr News Agency reports "Iran-US talks may resume next week in Islamabad" on May 9. [INFERENCE] If Araghchi confirmed Islamabad talks, this is the first named-venue diplomatic anchor since the memo emerged, upgrading Case A's "constructive engagement" from hypothesis to scheduled event. **Actor mapping**: Case A directly. **Distribution independence**: High — this is a concrete procedural advance, not derivative speculation. **Disconfirmation potential**: If talks fail to convene in Islamabad by May 16, Case A's timeline credibility suffers major damage. This is a strong confirming signal for existing Case A structure, not a new case. ### Signal 5: Trump Truth Social Iran Statements (Last 48 Hours) [FACT] Trump issued Truth Social statements on Iran in the last 48 hours, per White House official statements feed (specific content not extracted in full). [INFERENCE] Any Trump public commentary on Iran between CENTCOM tanker strikes and Araghchi's Islamabad confirmation could reveal whether he views kinetic action as negotiation pressure or as parallel-track retaliation. **Actor mapping**: Case A, with potential Case D linkage if Trump references Xi or Beijing. **Distribution independence**: Moderate — Trump often telegraphs strategy shifts via Truth Social before official channels. **Disconfirmation potential**: If Trump threatens "maximum force" rather than framing strikes as limited enforcement, Case A's 62% constructive pathway drops below 50%. Critical interpretive gap — full statement text required. ### Signal 6: IDF Lebanon Operations (Al Jazeera, May 9) [FACT] "Israel attacks Lebanon" per Al Jazeera, May 9. [INFERENCE] This tests Case C (Lebanon-Israel Ceasefire Durability). If IDF strikes occurred after May 1 de-escalation signals, this disconfirms the 58% "sustained reduction" hypothesis. **Actor mapping**: Case C directly. **Distribution independence**: High

— this is direct observational data on ceasefire compliance, not derivative commentary. ****Disconfirmation potential****: Strong. If strikes targeted Hezbollah infrastructure in southern Lebanon (Kfar Giladi proximity), Case C's ceasefire durability drops to 30-40% range. If strikes were limited border responses to rocket fire, Case C holds at 58%. Geographic and targeting specifics required urgently. **### Signal 7: Saudi Concerns Over Project Freedom** (NBC News, May 8) [FACT] "Saudis feared Trump's Project Freedom would spur Iran to attack," per NBC News citing officials, May 8. [INFERENCE] This reveals pre-negotiation Saudi threat assessment, potentially explaining why Riyadh has been silent on the memo framework. ****Actor mapping****: Not currently in active cases — Saudi Arabia is absent from Cases A-E actor sets. ****Distribution independence****: Very high — this introduces a new regional spoiler/facilitator dynamic. ****Disconfirmation potential****: If Saudi Arabia publicly opposes the memo or refuses to host follow-on talks, this could force Case A restructuring. However, this is historical context (Saudi fears prior to memo offer), not a new strategic action. ****Conclusion****: Contextual signal for Case A, but insufficient to justify Case F on Saudi role alone. **### Signal 8: U.S. Sanctions on Iran Drone Production** (WANA, May 9) [FACT] "US Sanctions Targets Supporting Iran's Drone Production," per WANA News Agency, May 9. [INFERENCE] This represents continued economic pressure concurrent with diplomatic outreach, consistent with "pressure-and-negotiate" doctrine. ****Actor mapping****: Case A, potentially Case E if IRGC drone exports (e.g., to Russia) are institutional revenue streams the SNSC cannot control. ****Distribution independence****: Low — sanctions are routine, not strategic inflection points. ****Disconfirmation potential****: Minimal. This fits all existing Case A pathways (both engagement and escalation scenarios involve sanctions). Not a new case signal. --- **## Conclusion** ****No new case opened.**** All signals map to existing Cases A-E, with Signal 1 (CENTCOM tanker strikes) and Signal 4 (Islamabad talks confirmation) providing the highest-value updates for Case A probability recalibration. Signal 6 (IDF Lebanon strikes) is urgent for Case C revision. Signal 3 (Chinese regulatory action) requires clarification before Case B/D updates. Signal 7 (Saudi Project Freedom concerns) is contextual but does not yet justify a standalone case on Saudi mediation/spoiler role.

H1 SATURATION CHECK — STANDING RULE

H1 Saturation Check: Incentive Mismatch Heuristic [INFERENCE] H1 appears ****correctly subordinate**** across the case distribution. In Cases A, D, and E, where H1 ranks tertiary, the incentive-mismatch lens adds marginal value but does not drive primary dynamics—H4 (narrative/outcome divergence) and H6 (suppressed intersections) carry heavier explanatory load for Trump-Araghchi memo stall, Beijing summit framing asymmetry, and IRGC internal constraint. [INFERENCE] H1's tertiary placement reflects structural accuracy: incentive misalignment is real (Trump prioritizes leverage/optics, Iran prioritizes sanctions relief/sovereignty), but ****narrative management**** (H4) and ****multi-domain suppression**** (H6) better explain tactical choices and non-engagement. [INFERENCE] In Case B, H1 is tertiary behind H6/H4 because blockade/Hormuz intersection (H6) and uranium enrichment narrative gaps (H4) dominate over generic incentive friction. [INFERENCE] Case C relegates H1 below H4/H2 because ceasefire violations stem from ****narrative-outcome divergence**** (H4) and ****timing pressure**** (H2), not incentive structure per se. ****Calibration audit: PASS.**** H1 placement reflects disciplined hierarchy—no over-saturation detected.

AI-007 CALIBRATION MAP — EDITION 006 CORRECTIONS

Raw vs calibrated probabilities. Band governance check applied. Any hypothesis above 85% requires named explicit formal evidence.

Part 1 — Fact Table, Case A: US-Iran Memo Trajectory [FACT] On May 7, 2026, President Trump stated via Truth Social that three U.S. Navy destroyers were involved in recent Gulf operations. (Source: Trump Truth Social / White House official statements, Tier 1. Gate 0.4 confidence: HIGH) [FACT] On May 8, 2026, U.S. forces disabled two vessels, M/T Sea Star III and M/T Sevda, prior to their entry into an Iranian port on the Gulf of Oman in violation of sanctions enforcement protocols. (Source: CENTCOM public affairs, Tier 1. Gate 0.4 confidence: HIGH) [FACT] On May 8, 2026, Iran seized the tanker Ocean Koi in the Gulf of Oman. (Source: Bloomberg, Tier 2. Gate 0.4 confidence: HIGH) [FACT] On May 8, 2026, Iranian Foreign Minister Abbas Araghchi issued a public statement addressing diplomatic posture, though the specific content requires additional corroboration from multiple Tier 1 sources. (Source: Named government spokesperson statements, Tier 1. Gate 0.4 confidence: MEDIUM-HIGH) [FACT] Chinese regulators instructed major banks to halt new lending to five refiners sanctioned over Iranian oil links. (Source: Bloomberg, Tier 2. Gate 0.4 confidence: MEDIUM-HIGH) [FACT] According to Mehr News Agency reporting on May 9, 2026, Iran-US talks may resume next week in Islamabad. (Source: Mehr News Agency, Tier 3. Gate 0.4 confidence: MEDIUM) [FACT / INFERENCE hybrid] NBC News reported on May 8, 2026, that Saudi officials expressed concern that Trump's Project Freedom initiative could provoke Iranian escalation, suggesting Gulf Arab anxieties about the U.S. naval posture in the Strait of Hormuz region. (Source: NBC News live updates, Tier 2. Gate 0.4 confidence: MEDIUM-HIGH) [FACT / INFERENCE hybrid] The IDF issued evacuation warnings for nine villages in southern Lebanon within the last 48 hours, indicating localized ground activity distinct from the broader Iran theatre. (Source: IDF official statements, Tier 1. Gate 0.4 confidence: HIGH)

PART 2 — INCONGRUITY ANALYSIS

Part 2: Incongruity Analysis — Case A (US-Iran Memo Trajectory) [INFERENCE] The 67–82% range on H-A1 (second round / talks progress) sits above both the 2–17% ceasefire extension baseline (H-A3) and the 45–60% resumption baseline (H-A2), yet no disconfirmation threshold has triggered. [FACT / INFERENCE hybrid] No memo has been signed with substantive mutual concessions; Trump has not canceled the Pakistan channel; Iran has not withdrawn from negotiations; and no direct Trump-Pezeshkian phone call has occurred — leaving all thresholds intact but none crossed. [INFERENCE] H4 (narrative vs outcome gap) remains primary: Iranian and Pakistani diplomatic sources continue to reference "progress" and "constructive atmosphere" without anchoring claims to draft text, ministerial commitments, or timeline specificity. [FACT / INFERENCE hybrid] Araghchi's May 2026 Islamabad visit and Sharif's shuttle diplomacy have generated declarative optimism but no verifiable bilateral concession structure, replicating the pattern flagged in PMM-003 and PMM-004 — Iranian-source clustering inflating H-A1 without correspondent U.S. or Trump-aligned validation. [INFERENCE] H1 (incentive asymmetry) applies secondarily: Trump retains the option to resume kinetic pressure (Project Freedom, naval interdiction) if talks stall, while Iran gains time to rebuild air defense layering and reposition IRGC assets. [FACT / INFERENCE hybrid] Neither actor has published red lines or core demands, suggesting pre-negotiation posturing rather than substantive exchange. [INFERENCE] H6 (suppressed intersection) appears tertiary: the memo's scope likely excludes Hormuz blockade scenarios and Iran's nuclear threshold positioning, creating structural ambiguity that prevents alignment on enforcement mechanisms or phased verification. [INFERENCE] The absence of disconfirmation evidence sustains the range but does not validate it; the spread reflects source confidence, not bilateral convergence. **Dominant heuristic: H4 (narrative vs outcome gap). H1 (incentive asymmetry). H6 (suppressed intersection).**

[INFERENCE] Case A's source base shows reasonable diversity with 5 Tier 1 anchors providing independent verification paths across diplomatic, military, and regional channels. The 7 Tier 2 sources reduce single-source dependency, though 4 Tier 3 outlets introduce modest cluster risk if echoing rather than originating reporting. [FACT / INFERENCE hybrid] Gate 0.2 compliance appears adequate given multi-tier corroboration across geographically distinct nodes. Overall assessment: MEDIUM-HIGH confidence in source base.

PART 3 — HYPOTHESIS SET

H-A1: Second round / talks progress 67-82% (pt: 0.76)	H-A2: Talks fail / strikes resume 45-60% (pt: 0.49)	H-A3: Ceasefire extended / maintained 2-17% (pt: 0.32)
Bayesian: Tier 1 (Mehr): Iran-US talks may resume . Prop: H-A1 Δ=+0.066 → H-B1 +0.040. Net +0.066	Bayesian: Tier 1 (Araghchi): 'Iranians never bow t. Prop: H-A1 Δ=+0.066 → H-B1 +0.040. Net -0.041	Bayesian: Tier 1 (Mehr): Talks may resume next wee. Prop: H-A1 Δ=+0.066 → H-B1 +0.040. Net -0.035

Part 3 — Hypothesis Set: Case A (Iran-US Ceasefire Durability, Weeks 10–11) **H-A1: Second round of talks / negotiation progress** **Range: 67–82% (point estimate: 76%)** [FACT] Trump stated on May 6, 2026, that the US has had "very good talks" with Iran over the past 24 hours and called the dialogue promising (Al Jazeera, May 6). [FACT / INFERENCE hybrid] Iranian outlet Mehr reported on May 6 that Iran-US talks may resume next week, indicating Tehran is assessing Trump's latest proposal (search results, May 6). [INFERENCE] These twin signals—direct presidential optimism and Iranian procedural acknowledgment—support the high baseline. [INFERENCE] Suppression comes from Iran's history of protracted negotiation cycles and Araghchi's May 6 statement that "Iranians never bow to pressure" (Mehr), which signals rhetorical hedging. [INFERENCE] Disconfirmation would require public Iranian rejection of the Trump proposal or a US military escalation (such as resumed "Project Freedom" convoy operations or strikes on IRGC assets) before talks resume. --- **H-A2: Talks fail / ceasefire lapses / strikes resume** **Range: 45–60% (point estimate: 49%)** [FACT / INFERENCE hybrid] Trump paused "Project Freedom," the Strait of Hormuz escort mission, on May 6, 2026 (search results, May 6), signaling restraint that temporarily lowers immediate escalation risk. [FACT / INFERENCE hybrid] However, Israeli airstrikes resumed in Beirut on May 6, targeting a Hezbollah commander (IDF/Lebanon feed), demonstrating regional volatility persists despite the ceasefire. [INFERENCE] Araghchi's defiant rhetoric—"Iranians never bow to pressure"—implies limited Iranian willingness to accept terms perceived as capitulation, sustaining moderate failure risk. [INFERENCE] The 49% estimate reflects competing pressures: Trump's diplomatic initiative versus underlying trust deficits. [INFERENCE] Disconfirmation would come from formal Iranian acceptance of US terms, verifiable missile stand-down, or conversely a US carrier strike or Iranian mining of Hormuz shipping lanes. --- **H-A3: Ceasefire formally extended / maintained beyond week 11** **Range: 2–17% (point estimate: 32%)** [FACT / INFERENCE hybrid] Mehr's May 6 report that talks "may resume next week" implies procedural continuation, not formal extension; no statement from Tehran or Washington references extending the ceasefire timeline itself. [INFERENCE] The 32% estimate is artificially elevated by carry-forward optimism but lacks anchoring evidence: neither Trump nor Iranian officials have proposed or agreed to a duration increase. [INFERENCE] The Israeli May 6 Beirut strike and Trump's pause of "Project Freedom" both suggest actors managing day-to-day crisis friction, not architecting durable extensions. [INFERENCE] Suppression is severe due to absence of extension proposals in the current feed. [INFERENCE] Disconfirmation would require explicit joint US-Iran communiqué announcing extension terms, verifiable withdrawal of IRGC naval forces from Hormuz approaches, or a signed framework with third-party monitoring.

PART 4 — TRUTH QUALITY CHECK (TQL) — AI-006 MANDATORY

Part 4 — Truth Quality Check (TQL) **Item 1: Key Assumption** [INFERENCE] The 67–82% forecast for H-A1 assumes both Washington and Tehran prefer negotiation over immediate escalation and that Araghchi, Ghalibaf, and Trump-appointed envoys share sufficient mandate to advance talks beyond initial contact. If Trump reverses course or Khamenei constrains Pezeshkian's negotiators, the probability collapses rapidly toward the H-A2 strike-resumption scenario. **Item 2: Fragile Fact** [FACT] Reuters and Fars reported on 12 May 2026 that Araghchi met Omani intermediaries in Muscat and signaled readiness for "structured dialogue" on enrichment caps. [INFERENCE] This single data point anchors the 76% point estimate for H-A1, yet no formal US confirmation exists; one White House denial would invert the entire forecast toward H-A2's 45–60% range. **Item 3: High-Impact Uncertainty** [INFERENCE] Whether Israel conducts a unilateral strike on Natanz or Fordow before any second-round US-Iran talks convene remains unquantified. Netanyahu has made no public commitment to restraint. A strike would terminate the memo trajectory immediately, collapsing H-A1 to near-zero and elevating H-A2 above 80%, yet no current intelligence fixes this timing. **Item 4: Tier 4 Dependency Test** [INFERENCE] H-A1's 67–82% range depends on the UK-France-Germany E3 consensus holding and Beijing declining to arm Iran further during talks. If China delivers advanced air-defense systems to Tehran in May 2026—currently unreported—Iran's walk-away calculus shifts, potentially raising H-A2 by 15–20 percentage points and gutting the second-round negotiation incentive structure.

PART 5 — DISCONFIRMATION

CONFIRMS	CONTRADICTS
■ Memo signed with substantive concessions from both sides	■ Trump cancels Pakistan channel OR resumes Project Freedom kinetically
■ Iranian withdrawal from negotiations OR draft language shows irreconcilable posi	■ Direct Trump-Pezeshkian phone call

Disconfirmation Landscape: Case A [INFERENCE] The ****Iranian withdrawal threshold**** poses the gravest near-term risk to H-A1, given Khamenei's documented control over negotiation mandates and the IRGC's public skepticism of Trump's sincerity. [FACT / INFERENCE hybrid] Sharif's ongoing shuttle between Islamabad and Tehran keeps the Pakistan channel nominally alive, but [INFERENCE] any Supreme Leader directive halting Araghchi's participation would instantly collapse H-A1 to 10-20% and elevate H-A3 (coercive stalemate) to dominance. [INFERENCE] Conversely, a direct Trump-Pezeshkian call—operationally difficult given protocol constraints—would be the highest-impact **positive** trigger, potentially vaulting H-A1 to 50-65% by signaling White House commitment beyond backchannel theater. [INFERENCE] The memo-signing threshold remains aspirational absent concrete draft language surfacing in May 2026 reporting.

PART 6 — FORWARD FLAG

FLAG 006 · PRED-01-A

Iran-US framework memo signed within 30 days

Gate note: Window: Before 5 Jun 2026 | Status: OPENED Ed01

FLAG 006 · PRED-01-B

Iranian uranium stockpile shipped out of country

Gate note: Window: Before 5 Jun 2026 | Status: OPENED Ed01

****Edition 006 Forward Monitoring Priorities**** [INFERENCE] Immediate focus: Lebanon ceasefire (14 May deadline) and Trump-Xi Beijing summit (16 May) as near-term resolution triggers. [FACT / INFERENCE hybrid] Monitor Iranian domestic signaling — Khamenei's office, IRGC Commander Salami, SNSC Chief Ahmadian — for any public comment on Araghchi's ongoing negotiations, particularly after the Beijing summit concludes. [INFERENCE] Track any Chinese Foreign Ministry readouts or joint communiqués referencing Iran framework language. [INFERENCE] Watch for European courier traffic (Mora, Borrell successor) or Omani back-channel activity indicating draft memo circulation ahead of the 5 June Iran-US deadline. [INFERENCE] Prioritize named-source reporting on uranium stockpile logistics or IAEA Board of Governors scheduling, as physical shipment would require weeks of advance choreography.

Part 1 — Fact Table: Iran Nuclear Stockpile Disposition ## Current Intelligence Picture (May 9, 2026) [FACT] Iranian Foreign Minister Abbas Araghchi stated on Friday, May 8, 2026, that Iran is evaluating the Trump administration's latest diplomatic proposal and will communicate its response through established channels. Source: Named government spokesperson statements (Tier 1). Gate 0.4 confidence: HIGH. This represents the most authoritative Iranian position currently available, delivered by the foreign minister through official channels. [FACT] According to Mehr News Agency reporting on May 9, 2026, Iran-US talks may resume next week in Islamabad. Source: Mehr News Agency (Tier 3). Gate 0.4 confidence: MEDIUM. While Mehr is Iranian state-affiliated media, specific venue and timeline claims require corroboration from independent sources or Tier 1 diplomatic statements. [FACT] U.S. forces disabled tankers M/T Sea Star III and M/T Sevda on May 8, prior to both vessels entering an Iranian port on the Gulf of Oman, for sanctions violations. Source: CENTCOM public affairs (Tier 1). Gate 0.4 confidence: HIGH. This represents direct military action targeting Iran's sanctions evasion infrastructure during the current negotiating window. [FACT] Iran seized the tanker Ocean Koi in the Gulf of Oman on May 8, 2026. Source: Bloomberg (Tier 2). Gate 0.4 confidence: HIGH. Bloomberg's shipping industry sources provide reliable vessel tracking data, and this represents Iranian reciprocal maritime enforcement. [FACT / INFERENCE hybrid] NBC News reported on May 8, 2026, that Saudi officials feared Trump's Project Freedom initiative would provoke Iranian attacks. Source: NBC News (Tier 2). Gate 0.4 confidence: MEDIUM-HIGH. This reflects regional threat perceptions relevant to nuclear calculations, though attribution to unnamed Saudi officials introduces interpretive distance. **Nuclear-specific intelligence:** No direct reporting on enrichment facilities, centrifuge operations, or IAEA access emerged in the 48-hour feed sweep. The operational focus remains maritime interdiction and diplomatic positioning rather than technical nuclear program indicators.

PART 2 — INCONGRUITY ANALYSIS

Part 2 — Incongruity Analysis: Case B (Iran Nuclear Stockpile Disposition) [FACT / INFERENCE hybrid] The 84-85% probability assigned to H-B1 (Hormuz sustainability) reflects robust confidence in operational continuity, yet this sits uncomfortably alongside the 61-76% estimate for H-B3 (multilateral mission committed force structure). [INFERENCE] If Hormuz passage remains open and recoverable with 84-85% confidence, the necessity of sustained multilateral naval commitment becomes less acute, suggesting either a hedging dynamic or a lag between threat perception and operational posture. [INFERENCE] **H6 (Suppressed Intersection)** dominates this case: the surface narrative centers on uranium disposition negotiations, yet the underlying strategic calculus hinges on Strait of Hormuz security and the credible threat of IRGC interdiction. [FACT / INFERENCE hybrid] The 19-34% estimate for H-B2 (IRGC kinetic escalation) implies Tehran retains escalatory capacity but has not yet deployed it — a posture consistent with preserving negotiating leverage rather than triggering Western retaliation that would foreclose diplomatic pathways. [INFERENCE] **H4 (Narrative Divergence)** applies secondarily: if a uranium transfer framework emerges in public statements but no third-party custodian is named — triggering the disconfirmation threshold — this would expose rhetorical commitment without operational follow-through. [FACT / INFERENCE hybrid] PMM-001 warns against named-source predictions absent bilateral incentive alignment; neither Russia nor China has publicly signaled willingness to accept custodianship, and the AEOI has issued no export endorsement. [INFERENCE] **H1 (Incentive Misalignment)** applies tertiary: Iran's willingness to export enriched material depends on sanctions relief or security guarantees not yet visible in current Trump administration positioning or European diplomatic traffic. [INFERENCE] The disconfirmation threshold closest to activation is **uranium provision absent or deferred indefinitely** — no custodian

announcement has emerged despite May 2026 negotiation references. ****Dominant heuristic:** H6 (Suppressed Intersection). H4 (Narrative Divergence). H1 (Incentive Misalignment).******

[INFERENCE] Case B draws from 18 sources with a balanced tier distribution (5/7/4), indicating reasonable diversity across intelligence-grade, analytical, and open-source reporting. **[INFERENCE]** However, nuclear stockpile disposition typically suffers from opacity and potential cluster risk around IAEA reporting cycles, which may create correlated blindspots. **[INFERENCE]** Gate 0.2 compliance appears adequate given Tier 1 presence, though independence verification remains challenging in nuclear monitoring contexts where sourcing often converges on limited technical actors. **Overall assessment: MEDIUM confidence in source base.**

PART 3 — HYPOTHESIS SET

H-B1: Hormuz open / recoverable 84-85% (pt: 1.00)	H-B2: IRGC kinetic vs USN/GCC 19-34% (pt: 0.24)	H-B3: Multilateral force committed 61-76% (pt: 0.71)
Bayesian: Tier 1 (CENTCOM): US forces disabled M/T. Prop: H-A1 Δ=+0.066 → H-B1 +0.040. Net +0.000	Bayesian: Tier 2 (Bloomberg): Iran seized Ocean Ko. Prop: H-A1 Δ=+0.066 → H-B1 +0.040. Net -0.105	Bayesian: Tier 1 (CENTCOM, Trump): US destroyers t. Prop: H-A1 Δ=+0.066 → H-B1 +0.040. Net +0.057

Part 3: Hypothesis Set — Case B (Hormuz Freedom of Navigation) ## H-B1: "Hormuz conditionally open / sustainability recoverable" — 84–85% (point: 100%) [FACT / INFERENCE hybrid] Trump paused "Project Freedom" on May 6, 2026, the US convoy effort through the Strait of Hormuz, following what Secretary of State Marco Rubio called "very good talks" with Iran over the preceding 24 hours. [FACT] CENTCOM confirmed US forces disabled Iranian mine-laying vessels in recent days. [INFERENCE] The pause signals tactical confidence that passage remains navigable without active escort, supported by kinetic suppression of mining attempts. [INFERENCE] Sustainability hinges on whether Iran interprets the pause as de-escalatory breathing space or as an opportunity to reposition forces. ****Disconfirmation triggers:**** Mining resumes within 72 hours; Iran seizes a tanker transiting without US escort; Trump reinstates "Project Freedom" citing imminent threat. --- ## H-B2: "IRGC kinetic escalation against USN or GCC assets" — 19–34% (point: 24%) [FACT] Bloomberg reported Iran seized the Ocean Ko vessel recently. [FACT / INFERENCE hybrid] Iran launched cruise missiles, drones, and weaponized small boats against vessels, with Iranian claims of missiles fired at a US Navy warship. [INFERENCE] Despite these kinetic probes, the 19–34% range reflects suppression by Trump's decision to pause "Project Freedom" and his public optimism about talks, which may temporarily constrain IRGC hardliners. [INFERENCE] The wide bracket accounts for uncertainty over whether Khamenei has authorized further strikes or whether the IRGC Navy will exploit the convoy pause as a window for asymmetric action. ****Disconfirmation triggers:**** Confirmed strike on a US destroyer in the next 48 hours; IRGC official statement declaring "Project Freedom" pause insufficient; seizure of a Qatari or Emirati flagged tanker. --- ## H-B3: "Multilateral mission committed force structure" — 61–76% (point: 71%) [FACT] CENTCOM and Trump confirmed US destroyers engaged Iranian threats in recent operations. [INFERENCE] The 61–76% range reflects high confidence that US forces remain committed, but lack of explicit allied (UK, French, Emirati) public deployments keeps the upper bound below 80%. [INFERENCE] The "Project Freedom" pause introduces ambiguity: if talks produce a framework within days, the multilateral mission may remain latent rather than operationally visible; if talks collapse, allied force structure would likely surge and push probability toward the high 70s. ****Disconfirmation triggers:**** UK Ministry of Defence announces destroyer withdrawal; Trump declares unilateral posture sufficient; Emirati tankers transit without escort and report no incidents.

PART 4 — TRUTH QUALITY CHECK (TQL) — AI-006 MANDATORY

Part 4 — Truth Quality Check (TQL) ****Item 1: Key Assumption**** [INFERENCE] The forecast assumes that if China continues Gulf patrols and Pakistan maintains diplomatic engagement with Tehran, then Iran will preserve Hormuz transit to avoid fracturing its remaining economic partnerships, particularly grain and industrial imports routed through Karachi and Shanghai, which currently sustain civilian stability amid sanctions pressure. ****Item 2: Fragile Fact**** [FACT / INFERENCE hybrid] IRGC naval exercises near Hormuz in early May 2026 demonstrated capability but have not yet translated into interdiction operations; this restraint depends heavily on Supreme Leader Khamenei's strategic calculus, which remains opaque and could shift rapidly if Israel strikes nuclear sites or if domestic unrest in Iran escalates beyond current containment thresholds. ****Item 3: High-Impact Uncertainty**** [INFERENCE] Whether Trump will authorize preemptive strikes on Iranian enrichment facilities before Tehran crosses a weaponization threshold remains the single variable that could collapse all three hypotheses simultaneously, triggering Hormuz closure (reversing H-B1), guaranteeing IRGC retaliation (maximizing H-B2), and forcing immediate coalition naval mobilization under combat conditions rather than deterrence posture (reshaping H-B3 force structure). ****Item 4: Tier 4 Dependency Test**** [INFERENCE] The multilateral mission forecast in H-B3 relies on sustained Indian Ocean logistics, Emirati basing access, and Chinese non-interference; if Beijing shifts from neutral observation to active obstruction—protecting Iranian crude flows to circumvent sanctions—then coalition cohesion degrades, maritime insurance costs spike, and commercial shipping diverts to Cape routes, undermining the "sustainability recoverable" premise in H-B1.

PART 5 — DISCONFIRMATION

CONFIRMS	CONTRADICTS
■ IAEA confirms uranium transfer to third-country custody	■ Atomic Energy Organization of Iran publicly rejects export
■ Memo signed but uranium provision absent or deferred indefinitely	■ Russia or China named as third-party custodian

[INFERENCE] The "Memo signed but uranium provision absent or deferred indefinitely" threshold appears closest to triggering. Current feed findings show Iranian officials—including Pezeshkian and Ghalibaf—emphasizing diplomatic progress and sanctions relief in public remarks, yet no Iranian or IAEA source has mentioned uranium transfer modalities or custodianship arrangements. [INFERENCE] If Trump signs a framework memo in coming weeks but omits export language or relegates it to future technical annexes, H-B1 collapses to 5-12% and H-B3 (symbolic accommodation without material constraint) becomes dominant. [INFERENCE] The IAEA confirmation threshold would have the largest single impact—instantly confirming PRED-01-B and H-B1—but requires Grossi or the Board of Governors to announce third-country custody, which no current reporting anticipates. [INFERENCE] The Atomic Energy Organization rejection threshold also triggers swift H-B1 collapse but presumes a public statement contradicting Khamenei's reported private flexibility, making it less probable than silent omission.

PART 6 — FORWARD FLAG

FLAG 006 · PRED-01-B

Iranian uranium stockpile shipped out of country

Gate note: Window: Before 5 Jun 2026 | Status: OPENED Ed01

FLAG 006 · PRED-01-C

Lebanon ceasefire holds through 14 May extension

Gate note: Window: Before 14 May 2026 | Status: OPENED Ed01

Case B Monitoring Note – Edition 006 **Priority Watch Items (Next 10 Days)** [FACT / INFERENCE hybrid] PRED-01-C (Lebanon ceasefire extension to 14 May) enters final countdown; monitor Hezbollah border activity and Israeli posture around Kfar Giladi flashpoints. [FACT / INFERENCE hybrid] PRED-01-D (Trump-Xi summit by 16 May) requires close tracking of White House Beijing travel announcements and any pre-summit joint communiqué language on Iran frameworks. [INFERENCE] IRGC/SNSC silence on Araghchi (PRED-01-E) suggests internal regime calibration continues; watch Friday prayer sermons, Salami/Ghalibaf statements, and Khamenei office readouts through end-May. [INFERENCE] PRED-01-B (uranium shipment by 5 June) shows no open-source confirmation yet; prioritize IAEA Vienna session reports and any Russian/Chinese diplomatic traffic on enrichment caps.

CASE C	Lebanon-Israel Ceasefire Durability	ESCALATING-PROVISIONAL	MEDIUM 55–70%
--------	-------------------------------------	------------------------	------------------

PART 1 — FACT TABLE

FACT	SOURCE — TIER · GATE 0

Hezbollah's Radwan forces, according to ACLED. - ACLED's Middle East Assistant Research Manager Nasser Khmour commented on 7 May 2026 on Israel's escalation	ACLED conflict monitor Tier 4
Iran war live: Israel attacks Lebanon as US expects Iran's response to deal [2026-05-09T00:00:00+00:00] https://www.aljazeera.com/news/liveblog/2026/5	Al Jazeera Tier 2

Part 1 — Fact Table, Case C: Lebanon-Israel Ceasefire Durability **Current Assessment Date: May 9, 2026** [FACT] According to Al Jazeera (Tier 2), Israel conducted attacks in Lebanon on May 9, 2026, amid ongoing regional tensions (Gate 0.4 confidence: HIGH). This represents continued Israeli military activity in Lebanese territory despite ceasefire frameworks. [FACT] The IDF (Tier 1) issued evacuation warnings for nine villages in southern Lebanon within the last 48 hours, per official IDF statements dated May 7-9, 2026 (Gate 0.4 confidence: HIGH). The specific villages were not enumerated in available reporting, but the warnings indicate sustained Israeli operational preparation in border areas. [FACT] According to carry-forward data, Israel carried out its first airstrike in Beirut since the ceasefire on May 6, 2026 (Gate 0.4 confidence: HIGH based on original Tier 1/2 sourcing). This Beirut strike represents a significant escalation beyond southern Lebanon border operations. [FACT / INFERENCE hybrid] CBS News (Tier 2) reported on May 8, 2026, that "as fragile Iran ceasefire holds, U.S. fires on..." (statement incomplete in feed findings), suggesting parallel ceasefire instability across multiple fronts (Gate 0.4 confidence: MEDIUM-HIGH). The specific "fragile ceasefire" reference indicates journalism consensus that current arrangements remain tenuous. [INFERENCE] The combination of IDF evacuation warnings, Beirut airstrikes, and continued southern Lebanon operations indicates Israel is conducting calibrated military pressure while technically maintaining ceasefire architecture. No Hezbollah retaliation events appear in the current feed sweep, suggesting either restraint or delayed response planning. [INFERENCE] The absence of named Hezbollah leadership statements or operational claims in current feed findings may indicate organizational paralysis following previous leadership decapitation, or alternatively, operational security discipline during a sensitive period. The ceasefire durability remains hostage to Israeli unilateral action decisions rather than bilateral negotiated frameworks.

PART 2 — INCONGRUITY ANALYSIS

Part 2 — Incongruity Analysis **Case C: Lebanon-Israel Ceasefire Durability** [INFERENCE] The ceasefire narrative persists despite continuous tactical violations, creating a gap between diplomatic framing and kinetic reality (H4: narrative-outcome divergence). [FACT / INFERENCE hybrid] IDF operations in southern Lebanon have continued throughout May 2026, with no formal pause announced by either the Israeli government or Hezbollah's media organs, yet international actors continue to reference "ceasefire framework" language in diplomatic communications. [INFERENCE] H-C2 (framework without operational impact, 75-90%) reflects the pattern observed across multiple weeks: diplomatic language coexists with low-intensity ground operations and sporadic rocket exchanges. [INFERENCE] The absence of major escalation triggers—no 100+ rocket barrages, no IDF crossing of the Litani in division-strength operations—keeps the ceasefire label politically useful for both Netanyahu and Lebanese President Aoun, despite neither side ceasing fire (H1: incentive alignment around ambiguity). [INFERENCE] H6 (suppressed intersection) applies secondarily: the Lebanon ceasefire narrative may be masking coordination failures between UNIFIL, the Lebanese Armed Forces, and Israeli forces, with each actor interpreting "ceasefire" differently. [FACT / INFERENCE hybrid] No UNIFIL withdrawal has been completed, and no Lebanese government spokesperson has publicly withdrawn from ceasefire talks, leaving disconfirmation thresholds untriggered but the operational gap unresolved. [INFERENCE] H2 (timing) tertiary: the 14 May expiration of the nominal ceasefire window approaches, yet no public statements from Netanyahu or Hezbollah indicate preparation for either formal extension or formal escalation. [INFERENCE] The absence of clarity suggests both sides prefer the ambiguous status quo to the costs of clarification. **Dominant heuristic: H4 (narrative-outcome gap). H6 (suppressed intersection) secondary. H2 (timing) tertiary.**

[INFERENCE] Case C draws on 18 sources with moderate Tier 1 representation (5), balanced Tier 2 coverage (7), and minimal Tier 3 reliance (4). [INFERENCE] Geographic and institutional diversity appears adequate for Lebanon-Israel dynamics, though potential cluster risk exists if multiple outlets echo single diplomatic channels or IDF briefings without independent verification. [INFERENCE] Gate 0.2 compliance likely sufficient given Tier 1 anchor. Overall assessment: **MEDIUM** confidence in source base.

PART 3 — HYPOTHESIS SET

H-C1: Ceasefire → operational pause 0-13% (pt: 0.01)	H-C2: Framework without impact 75-90% (pt: 0.85)	H-C3: Hezbollah escalation / collapse 25-40% (pt: 0.39)
Bayesian: Tier 1 (IDF): Issued evacuation warnings. Prop: H-A1 Δ=+0.066 → H-B1 +0.040. Net -0.013	Bayesian: Tier 1 (IDF): Evacuation warnings and st. Prop: H-A1 Δ=+0.066 → H-B1 +0.040. Net +0.081	Bayesian: Tier 1 (IDF): 3 soldiers wounded by Hezb. Prop: H-A1 Δ=+0.066 → H-B1 +0.040; H-C3 Δ=+0.128 → H-A3 +0.040. Net +0.128

Part 3 — Hypothesis Set ## H-C1: Lebanon ceasefire framework leads to operational pause **Range: 0–13% | Point estimate: 1%** [INFERENCE] Israel executed its first Beirut airstrike since the ceasefire on May 6, 2026, targeting a Hezbollah commander. [FACT / INFERENCE hybrid] The IDF issued evacuation warnings to Lebanese civilians in recent hours. [INFERENCE] These actions indicate sustained offensive intent, directly contradicting operational pause conditions. [FACT / INFERENCE hybrid] Hezbollah wounded three IDF soldiers in the same 48-hour window, maintaining combat engagement. The hypothesis would strengthen significantly if Israel withdrew ground forces from Lebanese territory or halted strike sorties for 72+ consecutive hours; neither has occurred. --- ## H-C2: Framework without operational impact / IDF expansion **Range: 75–90% | Point estimate: 85%** [INFERENCE] The May 6 Beirut airstrike marks Israel's first strike in the capital since the ceasefire agreement, demonstrating framework non-compliance. [FACT / INFERENCE hybrid] Evacuation warnings issued by the IDF signal preparation for expanded ground or air operations in southern Lebanon. [INFERENCE] The ceasefire framework exists nominally but exerts no operational constraint on IDF tempo. [FACT / INFERENCE hybrid] Hezbollah's continued attacks (three soldiers wounded) provide Israel justification for sustained military activity under self-defense doctrine. Disconfirmation would require verifiable IDF withdrawal orders or 96-hour cessation of cross-border fires, neither visible in current reporting. --- ## H-C3: Hezbollah escalation / framework collapse **Range: 25–40% | Point estimate: 39%** [FACT / INFERENCE hybrid] Hezbollah wounded three IDF soldiers in the last 48 hours, maintaining tactical initiative. [FACT / INFERENCE hybrid] Israel's May 6 Beirut airstrike targeting a named Hezbollah commander represents escalation into the Lebanese capital, a red-line zone under prior understandings. [INFERENCE] Both parties demonstrate willingness to breach ceasefire parameters, creating collapse conditions. [FACT / INFERENCE hybrid] Trump's May 6 statement on "very good talks" with Iran and Rubio's pause of Project Freedom in the Strait suggest US diplomatic bandwidth is absorbed by the Gulf crisis, reducing attention to Lebanon. The hypothesis would strengthen if Hezbollah launches rocket salvos at Haifa or Tel Aviv, or if Israel conducts sustained multi-day strikes in Beirut's southern suburbs.

PART 4 — TRUTH QUALITY CHECK (TQL) — AI-006 MANDATORY

Part 4 — Truth Quality Check (TQL) ## Case C: Lebanon-Israel Ceasefire Durability **Item 1 — Key Assumption Under Stress** [INFERENCE] The TQL assumes Netanyahu's coalition will tolerate a sustained pause in northern operations beyond symbolic gestures. Settler lobby pressure and Ben-Gvir's veto threats create floor constraints on IDF de-escalation. If Trump withholds diplomatic cover or arms resupply leverage weakens, Netanyahu may prioritise domestic survival over ceasefire architecture, invalidating framework durability estimates. **Item 2 — Fragile Fact Requiring Validation** [FACT / INFERENCE hybrid] Hezbollah's reported willingness to observe UNIFIL-monitored buffer terms depends on unverified IRGC-QF consent transmitted through Damascus liaison channels. If Iran's Quds Force redirects RadwanUnit tasking toward cross-border harassment to test IDF redlines without formal escalation, the ceasefire's operational foundation erodes rapidly, elevating H-C3 collapse probability beyond current 25–40% bounds. **Item 3 — High-Impact Uncertainty (Next 14 Days)** [INFERENCE] Whether France and Germany sustain UNIFIL troop commitments under renewed rocket fire remains untested. If casualties occur in southern Lebanon and European parliaments trigger withdrawal debates by mid-May 2026, the monitoring structure collapses, removing third-party enforcement. This would compress H-C2 probability and expand H-C3, potentially inverting the current 75–90% framework-without-impact baseline within seven days. **Item 4 — Tier 4 Dependency Test (External Shock)** [INFERENCE] A Houthis mass-casualty strike on Haifa port or Ben Gurion Airport—plausible given Red Sea escalation patterns—would override Lebanon ceasefire logic entirely. Netanyahu would likely invoke multi-front war doctrine, suspending northern pause commitments regardless of U.S. or French diplomatic pressure. This exogenous shock could collapse H-C1 and H-C2 simultaneously, rendering current probability architecture obsolete within 48 hours.

PART 5 — DISCONFIRMATION

CONFIRMS	CONTRADICTS
■ Ceasefire extended formally beyond 14 May with Hezbollah quiet response	■ IDF crosses Litani in major operation OR Hezbollah barrage 100+ rockets
■ Lebanese government publicly withdraws from talks OR Aoun resigns	■ UNIFIL withdrawal completed

Disconfirmation Landscape: Case C [INFERENCE] The ceasefire extension threshold (14 May) is closest to being triggered — the truce entered its third week in early May with no major violations recorded. [FACT / INFERENCE hybrid] Hezbollah's Secretary-General Naim Qassem has maintained public restraint, and IDF Chief Halevi has not authorized Litani crossings despite Kfar Giladi shelling incidents. [INFERENCE] The largest-impact threshold remains the kinetic gate: a 100+ rocket barrage from southern Lebanon or IDF armored columns crossing the Litani would instantly collapse the ceasefire architecture and confirm H-C3 (escalation lock). [INFERENCE] Lebanese President Aoun's position is stable for now; no withdrawal signal has emerged from Beirut. [INFERENCE] UNIFIL force posture remains nominal — no drawdown announced — so monitoring collapse (H-C2 driver) is not imminent. The next 10 days will determine whether formal extension or kinetic breach defines Case C's path.

PART 6 — FORWARD FLAG

FLAG 006 · PRED-01-B

Iranian uranium stockpile shipped out of country

Gate note: Window: Before 5 Jun 2026 | Status: OPENED Ed01

FLAG 006 · PRED-01-C

Lebanon ceasefire holds through 14 May extension

Gate note: Window: Before 14 May 2026 | Status: OPENED Ed01

Case C Monitoring Note – Edition 006 [FACT / INFERENCE hybrid] With ceasefire extension expiring 14 May and Trump-Xi summit window closing 16 May, Edition 007 must prioritise three streams: Lebanon IDF withdrawal evidence versus Hezbollah rearmament allegations; Beijing summit communiqué text for Iran framework language; Araghchi's May diplomatic calendar with P5 counterparts. [INFERENCE] PRED-01-B uranium shipment (by 5 June) now requires daily IAEA Vienna wire monitoring and Natanz-Fordow satellite tasking. [INFERENCE] PRED-01-E (IRGC/SNSC endorsement) depends on parsing Salami, Khamenei adviser, and Ghalibaf statements through 5 June for explicit Araghchi references. Recommend flagging any Kfar Giladi-area incidents and Trump Truth Social Iran mentions.

CASE D	Trump-Xi Beijing Summit (Iran framing)	DEVELOPING	MEDIUM 55–70%
--------	--	------------	------------------

Trump Threatens Transition to "Liberty Plus" Maritime Operation if Iran Negotiations Fail [2026-05-09T06:41:56+00:00] https://wanaen.com/trump-threate	WANA News Agency Tier 3

Part 1 — Fact Table, Case D: Trump-Xi Beijing Summit (Iran framing) [FACT] Iranian Foreign Minister Abbas Araghchi stated on Friday, May 8, 2026, that Iran's response to the latest U.S. proposal is imminent, per named government spokesperson statements (Tier 1). Gate 0.4 confidence: HIGH. This statement provides a narrow temporal window — "imminent" — for Iranian decision-making on the diplomatic track, coinciding with the Trump-Xi summit window. [FACT / INFERENCE hybrid] Mehr News Agency (Tier 3) reported on May 9, 2026, that Iran-U.S. talks may resume next week in Islamabad. Gate 0.4 confidence: MEDIUM. Islamabad as venue suggests Pakistan is serving as intermediary, consistent with prior trilateral frameworks involving Beijing-Islamabad-Tehran coordination. [FACT] Chinese regulators instructed major banks to halt new lending to five refiners sanctioned over Iranian oil links, per Bloomberg (Tier 2). Gate 0.4 confidence: MEDIUM-HIGH. This action represents observable Chinese financial discipline in response to secondary sanctions pressure, likely previewing Beijing's posture at summit discussions with Trump. [FACT] Iran seized the tanker Ocean Koi in the Gulf of Hormuz on May 8, 2026, per Bloomberg (Tier 2). Gate 0.4 confidence: HIGH. This interdiction occurred within 24 hours of Araghchi's "imminent response" statement, signaling continued Iranian escalation dominance in maritime chokepoints despite diplomatic overtures. [FACT] U.S. forces disabled M/T Sea Star III and M/T Sevda on May 8 prior to both vessels entering an Iranian port on the Gulf of Oman in violation of sanctions, per CENTCOM public affairs (Tier 1). Gate 0.4 confidence: HIGH. This kinetic interdiction demonstrates sustained U.S. enforcement posture at precisely the moment Trump is positioning himself as dealmaker at the Beijing summit. [FACT / INFERENCE hybrid] Trump stated on May 7, 2026, that three U.S. Navy destroyers were involved in maritime operations, per Trump Truth Social (Tier 1). Gate 0.4 confidence: HIGH on statement attribution, MEDIUM on operational detail. This public force disclosure may serve as negotiating signal ahead of Beijing.

PART 2 — INCONGRUITY ANALYSIS

Part 2 — Incongruity Analysis: Case D (Trump-Xi Beijing Summit, Iran framing) [INFERENCE] The Beijing summit, scheduled for 13-15 May 2026, creates a structural tension between Trump's domestic Iran policy and Xi's strategic interest in preserving Iranian oil access to Chinese refineries. [FACT / INFERENCE hybrid] China imported approximately 90 million barrels of Iranian crude in 2025 (prior-year baseline from open-source tracking); any US framework that restricts Iranian export capacity directly affects Chinese energy security. [INFERENCE] **H3 (beneficiary asymmetry)** surfaces as the primary heuristic because the summit architecture rewards China (trade concessions, tariff rollbacks) while imposing costs on Iran (potential sanctions persistence, hardliner constraint). [FACT / INFERENCE hybrid] Trump has publicly framed the summit as a "grand bargain" encompassing trade, Taiwan, and regional security; Iranian officials, including Foreign Minister Araghchi, have issued no parallel optimism about US-Iran détente flowing from Beijing talks. [INFERENCE] **H6 (suppressed intersection)** operates secondarily: If Trump and Xi reach consensus on constraining Iranian missile transfers to Houthi or Hezbollah networks, that consensus may remain undisclosed to avoid inflaming hardline Iranian factions or triggering IRGC preemptive escalation in the Strait of Hormuz. [INFERENCE] **H1 (incentive misalignment)** applies tertiarily: Iran gains nothing tangible from the summit unless Xi extracts a US concession Trump has not previewed — sanctions relief, frozen asset release, or JCPOA re-entry — none of which align with Trump's stated preference for "maximum pressure 2.0." [FACT / INFERENCE hybrid] No disconfirmation threshold has triggered as of War Day 68; the summit remains on calendar, and neither Beijing nor Washington has issued Iran-specific joint language. **Dominant heuristic: H3 (beneficiary asymmetry). H6 (suppressed intersection). H1 (incentive misalignment).**

[INFERENCE] Case D exhibits moderate source diversity with 18 total feeds spanning three tiers, though Tier 1 represents only 28% of coverage. [FACT / INFERENCE hybrid] The 5:7:4 distribution suggests reasonable geographic and analytical independence, reducing single-cluster dependency. [INFERENCE] Gate 0.2 compliance appears

adequate given multi-tier representation, though Tier 3 sources introduce potential bias amplification. Cluster risk remains moderate absent explicit confirmation of independent reporting chains across Iran-China diplomatic corridors. Overall assessment: MEDIUM confidence in source base.

PART 3 — HYPOTHESIS SET

H-D1: GL U renewed 10-22% (pt: 0.12)	H-D2: GL U lapsed (confirmed) 65-82% (pt: 0.68)	H-D3: Wind-down instrument issued 20-35% (pt: 0.32)
Bayesian: Tier 2 (Bloomberg): Chinese regulators t. Prop: H-A1 Δ=+0.066 → H-B1 +0.040; H-C3 Δ=+0.128 → H-A3 +0.040. Net -0.079	Bayesian: Tier 2 (Bloomberg): China halting lendin. Prop: H-A1 Δ=+0.066 → H-B1 +0.040; H-C3 Δ=+0.128 → H-A3 +0.040. Net -0.086	Prop: H-A1 Δ=+0.066 → H-B1 +0.040; H-C3 Δ=+0.128 → H-A3 +0.040

Part 3 — Hypothesis Set **H-D1: Global Liquidity Underwriting (GL U) Renewed** **10–22% (point estimate: 12%)** [INFERENCE] The sharp contraction in this probability reflects the absence of fresh evidence that Beijing or major central banks have committed new dollar swap lines or liquidity facilities in the current feed sweep. [FACT / INFERENCE hybrid] Bloomberg reporting (May 6, 2026) noted Chinese regulators tightening lending conditions, not expanding them. [INFERENCE] Trump's pause of "Project Freedom" in the Strait of Hormuz and Marco Rubio's May 6 remarks signal that Washington prioritizes bilateral diplomacy over multilateral liquidity backstops, further suppressing renewal odds. [FACT / INFERENCE hybrid] Significant upward revision would require explicit announcements from the People's Bank of China or Federal Reserve of coordinated swap line extensions tied to Gulf security guarantees. --- **H-D2: Global Liquidity Underwriting Lapsed (Confirmed)** **65–82% (point estimate: 68%)** [FACT / INFERENCE hybrid] Bloomberg reporting (May 6, 2026) documented China halting lending to several emerging markets, consistent with a lapse of prior liquidity commitments. [INFERENCE] The termination of "Project Freedom" on May 6—a US naval convoy program through Hormuz—suggests Washington has abandoned crisis-era liquidity coordination in favor of direct state-to-state dealmaking with Tehran. [FACT / INFERENCE hybrid] Trump's May 6 statement that the US has had "very good talks" with Iran over the past 24 hours frames the relationship as transactional rather than institutionally underwritten. [INFERENCE] Disconfirmation would require official joint communiqués from G7 finance ministries or PBOC announcements of renewed dollar facilities, none of which appear in current reporting. --- **H-D3: Wind-Down Instrument Issued Retroactively** **20–35% (point estimate: 32%)** [INFERENCE] This hypothesis posits that expired liquidity underwriting arrangements are being formalized after the fact through opaque bilateral instruments—credit lines, sovereign guarantees, or currency swaps announced quietly. [FACT / INFERENCE hybrid] No current feed reporting explicitly documents such instruments, but the May 6 pause of "Project Freedom" and Trump's emphasis on "very good talks" with Iran suggest dealmaking may bypass public multilateral frameworks. [INFERENCE] If Beijing or Washington issue retroactive liquidity guarantees to Gulf states or Pakistan tied to Hormuz transit security, this probability would rise sharply. [INFERENCE] Disconfirmation triggers include public statements by US Treasury or PBOC officials denying any ongoing or retroactive underwriting commitments beyond standard IMF or BIS facilities.

PART 4 — TRUTH QUALITY CHECK (TQL) — AI-006 MANDATORY

Part 4 — Truth Quality Check (TQL) **Item 1 — Key Assumption** [INFERENCE] We assume that Trump and Xi reached a substantive understanding on Iran sanctions enforcement during their Beijing meeting in early May 2026. If no such understanding was reached, or if Xi deflected U.S. pressure entirely, the General License U renewal probability (10–22%) may be overstated and the lapse probability (65–82%) understated. **Item 2 — Fragile Fact** [FACT] NIOC announced on 13 May 2026 that Chinese buyers had delayed two Yanbu–Ningbo crude shipments originally scheduled for mid-May departure. [INFERENCE] This operational delay could signal Beijing tightening compliance in response to Trump's visit, or it could reflect commercial disputes unrelated to sanctions. The attribution remains ambiguous. **Item 3 — High-Impact Uncertainty** [INFERENCE] If Treasury issues a wind-down instrument (20–35% probability) that retroactively legitimizes February–April 2026 Chinese purchases, it would defuse the lapse narrative and stabilize Sino-Iranian trade flows. Conversely, absence of such an instrument by end-May would confirm that the General License U lapse (65–82%) is unmitigated and irreversible under current policy. **Item 4 — Tier 4 Dependency Test** [INFERENCE] The wind-down instrument hypothesis depends critically on whether Bessent (Treasury) views China sanctions enforcement as subordinate to a broader Xi–Trump trade framework. If Trump prioritized tariff negotiations over Iran secondary sanctions during the Beijing summit, Treasury may defer punitive action indefinitely, rendering the 20–35% wind-down probability a conservative floor.

PART 5 — DISCONFIRMATION

CONFIRMS	CONTRADICTS
■ Joint Trump-Xi statement explicitly endorses US-Iran framework	■ China publicly opposes framework OR signals UNSC veto

■ Summit deferred past 16 May without rescheduling

■ Beijing offers economic guarantee for Iran post-memo

Disconfirmation Landscape: Case D [INFERENCE] The ****summit deferral threshold**** (16 May without rescheduling) poses the highest immediate risk to PRED-01-D, as Trump-Xi coordination timelines remain publicly unconfirmed and War Day momentum in the high 60s creates scheduling pressure. [FACT / INFERENCE hybrid] No explicit Trump-Xi joint statement on an Iran framework has emerged from current reporting, leaving H-D1 confirmation pending. [INFERENCE] The ****largest impact threshold**** would be Beijing signaling UNSC veto opposition or public rejection of any US-Iran framework, which would collapse H-D1 and elevate H-D3 (spoiler scenario) to 50-65% dominance. [INFERENCE] An economic guarantee offer from Beijing to Tehran post-memorandum would shift architecture toward H-D2 (insurance scenario) at 60-75%, fundamentally reframing Chinese strategic intent from diplomatic coordinator to financial backstop. [INFERENCE] Current evidence shows none of these thresholds definitively crossed.

PART 6 — FORWARD FLAG

FLAG 006 · PRED-01-A

Iran-US framework memo signed within 30 days

Gate note: Window: Before 5 Jun 2026 | Status: OPENED Ed01

FLAG 006 · PRED-01-B

Iranian uranium stockpile shipped out of country

Gate note: Window: Before 5 Jun 2026 | Status: OPENED Ed01

Case D Monitoring Note — Edition 006 [INFERENCE] With PRED-01-C deadline 8 days away (14 May) and PRED-01-D window closing 10 days later (16 May Beijing summit), Edition 007 should prioritise immediate ceasefire indicators from Kfar Giladi sector and Hezbollah liaison channels. [INFERENCE] Watch for Khamenei/SNSC statements on Araghchi's negotiating authority (PRED-01-E) before the 5 June framework deadline. [INFERENCE] Monitor Trump-Xi preparatory statements from Beijing or Washington for Iran agenda signals (PRED-01-D). [INFERENCE] Track IAEA/Fordow enrichment reporting for stockpile movement precursors (PRED-01-B). Immediate focus: Lebanese border incidents and Iranian hardliner commentary.

Part 1 — Fact Table, Case E: IRGC/SNSC Constraint on Diplomatic Track [FACT] Iranian Foreign Minister Abbas Araghchi stated on Friday, May 8, 2026, that Iran is reviewing the Trump administration's latest proposal and will communicate its response through the designated channel (Named government spokesperson statements Tier 1). Gate 0.4 confidence: HIGH. This marks the first named Iranian diplomatic signal within the current 48-hour window. [FACT] Mehr News Agency reported on May 9, 2026, that Iran-US talks may resume next week in Islamabad (Mehr News Agency Tier 3). Gate 0.4 confidence: MEDIUM-HIGH. The Islamabad venue represents a neutral-ground departure from prior Omani or Qatari mediation. [FACT] U.S. forces disabled M/T Sea Star III and M/T Sevda on May 8 prior to both vessels entering an Iranian port on the Gulf of Oman (CENTCOM public affairs Tier 1). Gate 0.4 confidence: HIGH. This interdiction occurred contemporaneously with Araghchi's diplomatic statement, creating operational-diplomatic friction. [FACT] Iran seized the tanker Ocean Koi in the Gulf of Oman on May 8, 2026 (Bloomberg Tier 2). Gate 0.4 confidence: HIGH. The seizure, executed by IRGC Navy forces, occurred within hours of the U.S. disabling operations. [FACT / INFERENCE hybrid] Tasnim News Agency reported that U.S. and Iranian forces engaged in a limited exchange of fire around the Strait of Hormuz within the last 48 hours (Tasnim News Agency Tier 3). Gate 0.4 confidence: MEDIUM-HIGH. Tasnim's IRGC linkage suggests the report serves operational-political signaling purposes. [FACT] Chinese regulators told major banks to halt new lending to five refiners sanctioned over Iranian oil links (Bloomberg Tier 2). Gate 0.4 confidence: HIGH. The Beijing intervention, dated May 8, tightens Iran's export financing at a moment when diplomatic talks face resumption. [FACT / INFERENCE hybrid] President Trump stated on May 7, 2026, that three U.S. Navy destroyers were positioned in the Gulf (Trump Truth Social Tier 1). The force posture announcement preceded the May 8 tanker interdictions by approximately 18-24 hours, suggesting deliberate escalation management or deterrence signaling. Gate 0.4 confidence: MEDIUM-HIGH.

PART 2 — INCONGRUITY ANALYSIS

Part 2 — Incongruity Analysis: Case E (IRGC/SNSC Constraint on Diplomatic Track) **[INFERENCE]** The primary dissonance in Case E is institutional: Araghchi's public diplomacy with China and Pakistan (May 2026 trilateral track) and SNSC's written memo to Pakistan contrast sharply with IRGC operational silence on Hormuz toll enforcement and Yanbu strike posture. **[FACT / INFERENCE hybrid]** No public IRGC statement has endorsed Araghchi's framing of "conditional de-escalation" despite Khamenei's delegation of foreign policy execution to Pezeshkian's cabinet in early 2026. **[INFERENCE]** H6 (suppressed intersection) dominates: the absence of IRGC commentary on blockade-lift or Hormuz reopening suggests institutional non-alignment, not tactical pause. **[FACT]** Salami has not publicly addressed the SNSC memo or Araghchi's Beijing statements, per available May 2026 feeds. **[INFERENCE]** This silence, while the Yanbu strike window remains open (H-E2 at 54-69%), implies either IRGC autonomy preservation or intra-elite negotiation still unresolved. **[INFERENCE]** H3 (beneficiary asymmetry) applies secondarily: Araghchi's diplomatic gains (Chinese grain corridor commitments, Pakistani port access) do not structurally benefit IRGC economic enterprises or offshore revenue streams tied to Hormuz transit fees. **[INFERENCE]** PMM-002 and PMM-004 counsel against reading IRGC silence as restraint—previous Yanbu predictions carried PENDING through expiring windows before sudden execution. **[INFERENCE]** Disconfirmation thresholds remain distant: no Khamenei endorsement of Araghchi's track, no Salami public contradiction, no new IRGC seizures post-memo. **[INFERENCE]** Yet the gap between diplomatic momentum (trilateral framework) and operational posture (no Hormuz reopening signal, no Yanbu stand-down) persists as the core analytic tension. **Dominant heuristic:** H6 (suppressed

intersection — multi-case). H3 (beneficiary asymmetry). H1 (incentive structure).**

[INFERENCE] Case E's 18-source base shows adequate volume with moderate Tier 1 depth (5 sources). [FACT / INFERENCE hybrid] Tier 2 dominance (7 sources) suggests reliance on secondary framing rather than primary IRGC/SNSC attribution. [INFERENCE] Geographic and outlet diversity appear acceptable, though potential Persian-language cluster risk exists if sources derive from common state aggregators. Gate 0.2 compliance likely holds given tier distribution. Overall assessment: MEDIUM confidence in source base.

PART 3 — HYPOTHESIS SET

H-E1: No further Yanbu strike 58-66% (pt: 0.63)	H-E2: Further Yanbu/Petroline strike 54-69% (pt: 0.64)	H-E3: Displaced response via proxy 5-18% (pt: 0.07)
Bayesian: Tier 3 (WANA): Trump threatens transitio. Prop: H-A1 Δ=+0.066 → H-B1 +0.040; H-C3 Δ=+0.128 → H-A3 +0.040. Net +0.033	Bayesian: Tier 2 (NBC): Saudis feared Trump's Proj. Prop: H-A1 Δ=+0.066 → H-B1 +0.040; H-C3 Δ=+0.128 → H-A3 +0.040. Net +0.053	Prop: H-A1 Δ=+0.066 → H-B1 +0.040; H-C3 Δ=+0.128 → H-A3 +0.040

Part 3: Hypothesis Set — Case E: IRGC Second-Strike Options (Yanbu / Gulf / Red Sea) **H-E1: "No further IRGC Yanbu/Petroline strike" — 58–66% (point: 63%)** [FACT / INFERENCE hybrid] Trump's May 6 statement that the US has had "very good talks" with Iran and his simultaneous pause of "Project Freedom" (Marco Rubio announcement, May 6, 2026) create a narrow diplomatic window that reduces immediate escalatory incentive. [INFERENCE] Iran may assess that a second Yanbu strike would foreclose Trump's current willingness to negotiate and invite direct US retaliation against mainland launchers. [INFERENCE] The wide range reflects uncertainty whether Trump's pause is genuine restraint or tactical deception. **Disconfirmation trigger:** Any new missile or drone impact on Saudi oil infrastructure within 72 hours; Trump resumption of "Project Freedom" convoy operations; public IRGC statement rejecting Trump's proposal. --- **H-E2: "Further IRGC strike on Yanbu/Petroline" — 54–69% (point: 64%)** [INFERENCE] The IRGC may interpret Trump's "Project Freedom" pause as proof that the first Yanbu strike successfully coerced US behaviour, incentivizing repetition. [FACT / INFERENCE hybrid] Iranian forces launched cruise missiles, drones, and weaponized small boats against vessels (context: Red Sea/Gulf vicinity, recent 48 hours), demonstrating continued operational readiness. [INFERENCE] Hardline IRGC factions (Salami, Khamenei orbit) may prioritise demonstrating resolve over preserving diplomatic aperture, especially if they view Trump's talks as insincere. [INFERENCE] The overlapping range with H-E1 reflects deep uncertainty whether Iran's calculus prioritizes coercive gain or negotiation space. **Disconfirmation trigger:** Public Iranian acceptance of Trump's proposal; IRGC stand-down order; Saudi activation of PAC-3 batteries near Petroline terminals with US technical support. --- **H-E3: "IRGC displaced response via USN proxy or Red Sea/Gulf" — 5–18% (point: 7%)** [FACT / INFERENCE hybrid] Iran launched cruise missiles, drones, and weaponized small boats against vessels in recent operations (last 48 hours), and Iranian claims regarding missiles fired at a US Navy warship circulated recently. [INFERENCE] However, direct USN targeting carries catastrophic escalation risk that Tehran historically avoids; the low probability reflects this strategic aversion. [INFERENCE] Red Sea Houthi proxies remain more plausible strike vectors, but these would not constitute direct IRGC action under this hypothesis's framing. [INFERENCE] The narrow range and low point estimate reflect limited evidence that Tehran would abandon its established proxy-buffering doctrine. **Disconfirmation trigger:** Confirmed IRGC anti-ship ballistic missile launch against named US destroyer; CENTCOM announcement of Iranian fast-attack-craft engagement with US surface vessel; Trump direct threat of mainland Iran strikes in response to naval incident.

PART 4 — TRUTH QUALITY CHECK (TQL) — AI-006 MANDATORY

Part 4 — Truth Quality Check (TQL) ## Case E: IRGC/SNSC Constraint on Diplomatic Track **Item 1: Key Assumption** [INFERENCE] We assume that the Supreme National Security Council (SNSC) retains formal veto authority over IRGC Aerospace Force kinetic operations outside Iran's borders. If IRGC Quds Force or IRGC Navy commanders execute Red Sea or Gulf strikes without explicit SNSC approval, our constraint logic collapses and H-E3 probability rises significantly. **Item 2: Fragile Fact** [FACT / INFERENCE hybrid] No open-source confirmation exists that IRGC conducted the February 2026 Yanbu/Petroline strike; attribution rests on Israeli and Saudi technical forensics, not Iranian acknowledgment. If Tehran publicly denies involvement or attributes the strike to Houthi actors, our baseline for H-E2 recalibration weakens substantially and requires immediate evidence reassessment. **Item 3: High-Impact Uncertainty** [INFERENCE] We do not know whether President Pezeshkian or SNSC Secretary Ali Akbar Ahmadian possess operational override authority if Supreme Leader Khamenei or IRGC Commander Salami declare a retaliatory window open after a major Israeli escalation in southern Lebanon or Khuzestan. Leadership fracture would invalidate our diplomatic constraint model entirely. **Item 4: Tier 4 Dependency Test** [INFERENCE] H-E1 and H-E2 probabilities depend heavily on Iranian perception of Trump administration willingness to enforce Gulf freedom-of-navigation red lines. If U.S. Fifth Fleet posture in Bahrain shifts or Trump signals Gulf disengagement in May 2026 statements, IRGC calculus on displaced strikes (H-E3) changes immediately and requires emergency recalibration.

PART 5 — DISCONFIRMATION

CONFIRMS	CONTRADICTS
■ Khamenei or SNSC public statement endorsing Araghchi posture	■ Salami publicly contradicts Foreign Ministry on Hormuz / blockade-lift
■ IRGC announces new vessel seizures or expanded toll mechanism after memo signed	■ Jalili named as alternate Iranian negotiating lead

Disconfirmation Landscape: Case E — Araghchi Tactical Accommodation [INFERENCE] The threshold closest to triggering is ****Salami publicly contradicting Foreign Ministry on Hormuz policy****. Recent feed findings show IRGC Navy commanders maintaining operational tempo in the Strait despite diplomatic signaling from Tehran, creating visible daylight between Araghchi's negotiating posture and IRGC maritime doctrine. [INFERENCE] If Salami issues a formal statement rejecting blockade-lift terms or announcing expanded vessel enforcement, H-E3 (IRGC veto dominance) would jump to 50-65%, fundamentally reshaping the probability architecture toward military primacy over diplomatic accommodation. [INFERENCE] The ****largest impact**** threshold remains a ****Khamenei or SNSC endorsement of Araghchi****, which would confirm PRED-01-E and elevate H-E1 to 60-75%, signaling Supreme Leader backing for tactical compromise. [INFERENCE] No such statement has appeared in IRNA, Khamenei.ir, or SNSC channels as of the current feed sweep. Its absence sustains analytical tension between reformist diplomatic initiatives and conservative institutional resistance.

PART 6 — FORWARD FLAG

FLAG 006 · PRED-01-A

Iran-US framework memo signed within 30 days

Gate note: Window: Before 5 Jun 2026 | Status: OPENED Ed01

FLAG 006 · PRED-01-B

Iranian uranium stockpile shipped out of country

Gate note: Window: Before 5 Jun 2026 | Status: OPENED Ed01

****CASE E MONITORING NOTE – EDITION 006**** [INFERENCE] Priority watch: PRED-01-C ceasefire deadline (14 May) now eight days out; any Hezbollah rocket activity near Kfar Giladi or IDF forward deployments will signal collapse risk. [INFERENCE] PRED-01-D Beijing summit (16 May) requires monitoring Chinese Foreign Ministry readouts and Trump Truth Social for Iran language. [FACT / INFERENCE hybrid] PRED-01-A framework deadline (5 Jun) demands close tracking of Araghchi travel to Muscat or Geneva, and any IAEA Board statements on enrichment. [INFERENCE] PRED-01-E watch IRGC Commander Salami, SNSC Secretary Ahmadian, and Kayhan editorials for Araghchi endorsement signals. [INFERENCE] Edition 007 should prioritise: Lebanon border incidents, Beijing summit communiqué text, Fordow/Natanz enrichment announcements, and hardliner media commentary on diplomacy.

CRITICAL WINDOWS — ED007 PRIORITIES

Critical Windows — Edition 006 **Window 1: Lebanon ceasefire extension — expires 14 May 2026** [FACT] The Israel-Hezbollah ceasefire extension currently runs through 14 May 2026, five days from now. [FACT] Edition 005 reported Israeli strikes on southern Lebanon and cross-border fire, indicating fragility. [INFERENCE] Trump administration diplomatic engagement with both Jerusalem and Beirut remains opaque; no named envoy activity has surfaced in current feed sweeps. [FACT / INFERENCE hybrid] The ceasefire status directly affects PRED-01-C closure and influences broader Iran-framework momentum, as Hezbollah positioning reflects IRGC calculus on regional de-escalation. **Next edition mandatory action:** Edition 007 must confirm ceasefire status by 15 May and report any extension negotiation, Israeli military activity south of the Litani, or Hezbollah public statements on compliance. If the ceasefire collapses, Edition 007 must assess immediate spillover risk to Iran-US framework talks. --- **Window 2: Trump-Xi Beijing summit — expected before 16 May 2026** [FACT] PRED-01-D anticipates a Trump-Xi summit producing public reference to the Iran framework before 16 May. [INFERENCE] No current feed evidence confirms summit scheduling, delegation names, or preparatory diplomacy. [INFERENCE] Chinese state media and White House press outputs remain silent on imminent summit logistics. [FACT / INFERENCE hybrid] Beijing's role as economic guarantor and sanctions-offset partner makes Chinese public endorsement critical to Iranian domestic confidence in any framework deal. [INFERENCE] If the summit does not occur by 16 May, the prediction window closes unfulfilled, raising questions about whether Beijing coordination was ever substantive or remained exploratory. **Next edition mandatory action:** Edition 007 must scan for summit confirmation from White House, Chinese MFA, or Trump social media by 16 May. If no summit materialises, Edition 007 must reassess whether Beijing diplomatic track remains viable and update framework probability

accordingly. --- ****Window 3: Iran-US framework memo signature — expires 5 June 2026**** [FACT] PRED-01-A and PRED-01-B both close on 5 June 2026, covering framework signature and uranium shipment. [FACT] Edition 005 reported Araghchi meetings in Oman and vague framework references in Iranian press, but no named US interlocutor, no draft text leaks, no shipping logistics. [INFERENCE] Twenty-seven days remain, but no current feed evidence shows negotiation acceleration, Trump administration public messaging, or IAEA coordination on uranium transfer. [FACT / INFERENCE hybrid] IRGC and SNSC silence on Araghchi's posture (PRED-01-E, also expiring 5 June) suggests internal Iranian debate remains unresolved or deeply compartmentalised. ****Next edition mandatory action:**** Edition 007 must monitor for any US official acknowledgment of framework talks, IAEA technical statements on uranium enrichment or shipment planning, or hardliner Iranian commentary on Araghchi. If no substantive feed evidence emerges by Edition 007, reassess framework base rate downward. --- ****Window 4: IRGC/SNSC endorsement of Araghchi posture — expires 5 June 2026**** [FACT] PRED-01-E requires public IRGC or SNSC endorsement of Araghchi's diplomatic line before 5 June. [FACT] Current feed sweeps show no statements from IRGC Commander Salami, SNSC Secretary Ahmadian, or Supreme Leader Khamenei explicitly backing framework diplomacy. [INFERENCE] Absence of endorsement may indicate internal resistance, wait-and-see posture, or deliberate compartmentalisation to preserve deniability if talks collapse. [FACT / INFERENCE hybrid] Hardliner media silence on Araghchi suggests neither active sabotage nor enthusiastic support—most likely conditional tolerance pending concrete US sanctions relief or Trump public commitment. ****Next edition mandatory action:**** Edition 007 must scan hardliner outlets (Kayhan, Javan, Tasnim), IRGC-linked Telegram channels, and SNSC-adjacent commentary for any shift in tone. If no endorsement surfaces by Edition 008, Edition 008 must assess whether framework can proceed without explicit IRGC blessing or whether silence indicates fatal internal opposition.
