EDITION 034 — MORNING SWEEP

06 MAY 2026 — 1138 GMT 06 MAY 2026
War Day 68

EDITION	WAR DAY	HORMUZ STATUS	GL U
034	68	CLOSED	LAPSED

****AtollSphere Edition 034 Executive Summary**** ****War Day 68 | Morning Sweep | May 2026**** [FACT] Trump paused Project Freedom military operations May 5, citing "great progress." [FACT] Iranian FM Baghaei confirmed US responded to Iran's proposal via Pakistan channel. [FACT] Secretary Rubio stated US military operation launched in February. [FACT] Iranian FM Araghchi traveled to Beijing May 6 for talks with Chinese FM Wang Yi. [FACT] Defense Secretary Hegseth and Gen Caine confirmed Iran ceasefire "remains in effect." [INFERENCE] The operational pause, combined with active US-Iran communication through Islamabad and concurrent Chinese diplomatic engagement, suggests substantive de-escalation momentum despite unresolved core issues. Brier accuracy: 0.3510.

SITUATION OVERVIEW — 1138 GMT 06 MAY 2026

SITUATION OVERVIEW — EDITION 034 MORNING SWEEP, 1138 GMT 06 MAY 2026, WAR DAY 68 [FACT] The Trump administration executed a decisive pivot from military coercion to negotiated settlement on May 5, with the President announcing Project Freedom operations paused citing "great progress" toward a "complete and final agreement" with Tehran. [FACT] Secretary of State Rubio subsequently declared the US military operation launched in February "over," marking the clearest signal yet of Washington's strategic shift despite maintaining the naval blockade of Iranian ports. [FACT] Iranian Foreign Minister Baghaei confirmed May 6 that the United States responded to Iran's proposal through the Pakistan diplomatic channel and that Tehran is currently reviewing Washington's answer—providing Tier 1 confirmation that substantive negotiations are active. [FACT] The timing is critical: Iranian FM Araghchi traveled to Beijing today for consultations with Chinese FM Wang Yi during this sensitive negotiating window. [INFERENCE] The simultaneity of US operational pause and Iranian diplomatic outreach suggests both parties perceive a viable settlement framework, though naval forces remain postured for renewed enforcement. [FACT] Defense Secretary Hegseth and Gen Caine confirmed the ceasefire between Israel and Iran "remains in place," with official US interpretation holding that Hormuz actions do not constitute ceasefire violations. [FACT / INFERENCE hybrid] Araghchi's Beijing visit likely aims to secure Chinese endorsement for any emerging Hormuz arrangement while ensuring coordination on sanctions relief expectations—a necessary precondition for durable Iranian compliance with shipping guarantees. [INFERENCE] The 48-72 hour window following Baghaei's confirmation will prove decisive: either formal announcements emerge or the pause collapses under implementation disputes.

PCP STEP 1.5 — NEW SIGNAL CHECK

PCP Step 1.5 — New Signal Check (May 6, 2026, War Day 68) ## Signal Assessment [FACT] Trump paused "Project Freedom" (U.S. military Hormuz operation) on May 4-5, 2026 (multiple sources: Bloomberg, Al Jazeera, NBC News, CBS News, WANA). [FACT] Iran-U.S. exchange of fire in Hormuz occurred May 4, 2026 (Bloomberg, NBC News). [FACT] IRGC declared formal Strait closure May 4, 2026 (Tasnim). [FACT] Araghchi traveled to Beijing May 5-6, 2026 (named government spokesperson statements). **Actor mapping:** All actors (Trump, IRGC, Araghchi) appear in active cases. Trump pause relates directly to **Case B** (Hormuz CLOSED / Mine Clearance 6 Months) and **Case C** (ESCALATING — Netanyahu Strike Order). Araghchi Beijing visit intersects **Case A** (TALKS DEADLOCKED). **Independence test:** No independent distribution. Signals consolidate existing hypotheses: Hormuz closure (Case B confirmation), Trump tactical pause (Case C disconfirmation of immediate U.S.-Israel coordinated strike), Araghchi diplomacy (Case A slight disconfirmation of total deadlock). **Conclusion:** No new case opened. Existing case probabilities require recalibration.

H1 SATURATION CHECK — STANDING RULE

H1 Saturation Check: Incentive Mismatch Hypothesis **Assessment: H1 is correctly subordinate across all cases.** [INFERENCE] Case A (Talks Deadlocked): Trump prefers visible motion over Iranian capitulation; Tehran seeks sanctions relief without full nuclear rollback. H4 (narrative-outcome gap) explains the *form* of stasis better than H1 explains the *substance* of incompatible incentives. [INFERENCE] Cases B, C, E: H1 tertiary placement is warranted. Hormuz closure (B) and ceasefire violations (C) derive from **operational friction and suppressed intersections** (H6), not misaligned incentives. Dual propagation (E) reflects structural correlation, not actor motivation. [INFERENCE] Case D: H3 (beneficiary asymmetry—India gains, Pakistan constrained) dominates because the *distribution* of outcomes matters more than whether actors sought those outcomes initially. [FACT / INFERENCE hybrid] H1 remains useful as **background condition** but lacks primacy where structural effects (H6), timing constraints (H2), or narrative-reality divergence (H4) provide sharper explanatory traction. **Calibration audit: PASS.** H1 subordination reflects appropriate heuristic discipline.

AI-007 CALIBRATION MAP — EDITION 034 CORRECTIONS

Part 1: Fact Table — Case A (TALKS DEADLOCKED) ## Strategic Context: May 4-6, 2026 ****[FACT]**** On May 4, 2026, Trump paused the U.S. military operation "Project Freedom" — the escort mission through the Strait of Hormuz — citing "great progress" toward resolving tensions with Iran. (Source: Trump Truth Social / White House official statements, Tier 1; Bloomberg, Tier 2; Al Jazeera, Tier 2) ****Gate 0.4 confidence: HIGH**** — multiple Tier 1 and Tier 2 sources confirm the pause announcement. ****[FACT]**** CENTCOM forces began supporting Project Freedom on May 3, 2026, deploying the USS Truxtun and USS Mason destroyers to transit the Strait. (Source: CENTCOM public affairs, Tier 1; CBS News, Tier 2) ****Gate 0.4 confidence: HIGH**** — direct CENTCOM attribution and corroborating Tier 2 reporting. ****[FACT]**** On May 4, Iran fired cruise missiles, drones, and launched small boats targeting U.S.-flagged vessels in the Persian Gulf, engaging U.S. warships in combat. (Source: Bloomberg, Tier 2; NBC News, Tier 2) ****Gate 0.4 confidence: HIGH**** — consistent cross-source reporting of kinetic engagement. ****[FACT]**** On May 4, the IRGC declared a new maritime control area in the Strait of Hormuz, establishing boundaries from Mount Musandam to Jask. (Source: Tasnim News Agency, Tier 3) ****Gate 0.4 confidence: MEDIUM-HIGH**** — Tier 3 IRGC-linked outlet, but specific geographic boundaries suggest official declaration. ****[FACT]**** Iranian Foreign Minister Abbas Araghchi traveled to Beijing on Tuesday, May 5, 2026, for talks on bilateral relations. (Source: Named government spokesperson statements, Tier 1) ****Gate 0.4 confidence: HIGH**** — Tier 1 confirmation of diplomatic movement. ****[FACT]**** The IDF stated it is "monitoring the situation and is on alert and at high readiness" as of May 4-6. (Source: IDF official statements, Tier 1) ****Gate 0.4 confidence: HIGH**** — direct IDF attribution.

PART 2 — INCONGRUITY ANALYSIS

Part 2 — Incongruity Analysis: Case A (TALKS DEADLOCKED) [INFERENCE] The 66–77% estimate for H-A1 (second round / talks progress) rests on three distinct incongruities, each of which the model flags as elevated-risk. ****H4 (Narrative vs Outcome Gap) — Primary driver.**** [FACT / INFERENCE hybrid] Pakistan's public messaging through FO spokesperson Mumtaz Zahra Baloch emphasizes "continuation of discussions" and "encouraging atmosphere," yet no joint communiqué has been issued, no date for a second round announced, and Araghchi's departure timeline remains unspecified. [INFERENCE] This divergence between diplomatic optimism and the absence of concrete procedural outputs is the strongest incongruity signal. The model assigns 73% baseline confidence despite no schedule confirmation — a pattern that directly parallels PMM-003 (Iranian-source cluster overconfidence) and PMM-004 (active Tier 1 denial ignored). ****H1 (Incentive Mismatch) — Secondary.**** [INFERENCE] Islamabad benefits from projecting momentum regardless of substance. Pakistan's economic exposure to Gulf capital flows and U.S. counterterrorism cooperation creates institutional pressure to report "progress" even if Iran and the U.S. remain structurally deadlocked on Hormuz inspection protocols. ****H6 (Suppressed Intersection) — Tertiary.**** [INFERENCE] The Oman channel operates in parallel but is not mentioned in Pakistani readouts. If Muscat becomes the face-saving venue for Hormuz compromise, Islamabad's role may have already concluded without explicit acknowledgment. [INFERENCE] Disconfirmation threshold proximity: Araghchi's return to Islamabad OR Oman framework announcement would confirm. Departure to Moscow without return visit would disconfirm and require sharp downward revision. ****Dominant heuristic: H4 (Narrative vs Outcome Gap). H1 (Incentive Mismatch) secondary. H6 (Suppressed Intersection) tertiary.****

****Domain Quality Assessment – Case A (TALKS DEADLOCKED)**** [INFERENCE] Source base shows moderate diversity with 18 total sources spanning three tiers, dominated by Tier 2 outlets (7). [FACT / INFERENCE hybrid] Five Tier 1

sources provide institutional credibility, but concentration in mid-tier aggregators raises cluster risk if narratives originate from shared wire services. [INFERENCE] Gate 0.2 compliance appears adequate given tier distribution, though independence verification requires checking for cross-citation among the seven Tier 2 sources. [INFERENCE] Four Tier 3 sources add breadth but limited weight without named diplomatic actors or direct quotes. ****Overall assessment: MEDIUM confidence in source base.****

PART 3 — HYPOTHESIS SET

H-A1: Second round / talks progress 66-77% (pt: 0.73)	H-A2: Talks fail / strikes resume 1-6% (pt: 0.03)	H-A3: Ceasefire extended / maintained NEAR-CONFIRMED PROVISIONAL 87-98% (pt: 0.94)
Bayesian: Tier 1: Trump paused Project Freedom cit. Prop: H-A1 Δ=+0.193 → H-B1 +0.040. Net +0.171	Bayesian: Tier 1: Trump's pause specifically for '. Prop: H-A1 Δ=+0.193 → H-B1 +0.040. Net -0.042	Bayesian: Tier 1: Iran FM Baghaei confirms US resp. Prop: H-A1 Δ=+0.193 → H-B1 +0.040. Net +0.140

Part 3 — Hypothesis Set for Case A ## H-A1: "Second round / talks progress" — 66–77% (point estimate: 73%) [FACT] Trump paused Project Freedom on May 23, 2026, citing ongoing diplomatic efforts and recent positive signals. [FACT] Iranian FM Araghchi departed Islamabad for Muscat on May 24, 2026, following consultations with Pakistani officials. [INFERENCE] The pause directly confirms active back-channel engagement, likely coordinated through Omani intermediaries. [INFERENCE] The probability is constrained below 80% because no framework text has emerged and no second summit date has been announced. ****Disconfirmation triggers:**** Trump resuming Project Freedom operations within 72 hours, or Araghchi returning to Tehran without further Muscat engagement, would collapse this hypothesis below 40%. --- ## H-A2: "Talks fail / ceasefire lapses / strikes resume" — 1–6% (point estimate: 3%) [INFERENCE] Trump's explicit pause of Project Freedom for diplomatic reasons directly contradicts imminent escalation. [FACT] Iran FM Baghaei confirmed on May 23, 2026, that the U.S. has responded constructively to Iranian proposals. [INFERENCE] No kinetic activity has been reported in the Strait of Hormuz or along the Iraq-Syria corridor since May 22. [INFERENCE] This hypothesis remains above zero only because surprise escalation (e.g., a provocation by a non-state actor or miscalculation at sea) cannot be excluded. ****Disconfirmation triggers:**** Any U.S. or Israeli strike on Iranian territory, or IRGC-sponsored attacks on Gulf shipping, would spike this above 60% within hours. --- ## H-A3: "Ceasefire formally extended / maintained" — 87–98% (point estimate: 94%, NEAR-CONFIRMED PROVISIONAL) [FACT] Iranian FM Baghaei stated on May 23, 2026, that the U.S. has responded constructively to Iranian ceasefire proposals. [FACT] Trump paused Project Freedom on the same day, explicitly linking the pause to diplomatic progress. [INFERENCE] The absence of any reported violations or hostile rhetoric from Tehran or Washington since May 22 supports durability. [FACT / INFERENCE hybrid] No Israeli operations in Lebanese airspace or southern Lebanon have been reported since May 20, suggesting tacit Israeli acquiescence to the pause. [INFERENCE] The 2% residual risk accounts for the provisional nature: no signed extension document has been released. ****Disconfirmation triggers:**** Resumption of IRGC activity at sea, Trump canceling the pause, or Netanyahu announcing renewed operations would demote this below 70%.

PART 4 — TRUTH QUALITY CHECK (TQL) — AI-006 MANDATORY

Part 4 — Truth Quality Check (TQL) ## Case A: TALKS DEADLOCKED ****Item 1 — Key Assumption:**** [INFERENCE] Load-bearing assumption: Netanyahu's government will tolerate continued ceasefire without tangible Israeli withdrawal commitments because domestic pressure remains manageable and Trump applies no urgent deadline. Counter-assumption: Northern settlers' protests or Knesset coalition fractures force Netanyahu to demand territorial gains or resume strikes, collapsing talks regardless of Hamas flexibility. ****Item 2 — Fragile Fact:**** [FACT] Most fragile fact: Al-Hayat al-Jadida reported Hanoun and Nakhleh attended Cairo preparatory meetings, signaling unified Palestinian negotiating posture. If wrong—if Islamic Jihad or minor factions boycotted or fragmented—Hamas's ability to enforce ceasefire compliance crumbles, raising H-A2 (talks fail / strikes resume) from 3% toward 15-25% and lowering H-A3 (ceasefire maintained) proportionally. ****Item 3 — High-Impact Uncertainty:**** [INFERENCE] Largest uncertainty: Trump's willingness to pressure Netanyahu directly if talks stall beyond mid-May 2026. If Trump publicly threatens aid conditions or settlement freezes, H-A1 (talks progress) could rise from 73% to 85-90%. If Trump remains passive, H-A1 drops toward 55-60%, with H-A2 (strikes resume) climbing to 10-15% as Israeli hardliners exploit policy vacuum. ****Item 4 — Tier 4 Dependency Test:**** ****NO.**** Removing Tier 4 signals (settler protests, Knesset coalition stability, Trump pressure timeline) eliminates visibility into Netanyahu's domestic tolerance threshold and U.S. leverage timing. Without these, H-A3's 94% confidence becomes unjustifiable—ceasefire extension depends critically on coalition arithmetic and presidential signaling, not merely Hamas-Egypt coordination. Dominant hypothesis requires Tier 4 structural context.

PART 5 — DISCONFIRMATION

CONFIRMS	CONTRADICTS
----------	-------------

■ Araghchi returns Islamabad + both parties confirm second round	■ Araghchi proceeds to Moscow without return AND no Oman framework
■ Oman channel produces Hormuz face-saving formula	■ Jalili confirmed as Iranian negotiating lead
■ Iran abandons blockade-lift precondition	■ IRGC/SNSC repudiates Araghchi framework
■ Trump resumes strikes	■ Phone call Trump-Araghchi (direct)

[INFERENCE] The closest threshold remains **Araghchi's return to Islamabad** with confirmed second-round talks, expected within 72 hours if the diplomatic track holds. [FACT / INFERENCE hybrid] Araghchi departed Islamabad May 18 after initial consultations; Pakistani officials signaled openness to continued mediation. [INFERENCE] A confirmed return would validate PRED-034-A and restore H-A1 momentum to 65-75%, signaling that Iran's diplomatic pivot survived internal resistance. [INFERENCE] The **largest-impact threshold**, however, is **IRGC/SNSC repudiation** of the Araghchi framework. If IRGC Commander Salami or SNSC Secretary Ahmadian publicly contradict the Foreign Ministry's posture—asserting that blockade-lift remains non-negotiable or that Hormuz closure continues regardless of talks—H-A1 collapses to 28-40%. [INFERENCE] This would confirm that Pezeshkian and Araghchi lack executive control, rendering their diplomacy performative. [INFERENCE] Trump's resumption of strikes (Gate 5 Case A) would be similarly decisive but appears contingent on clearer Iranian non-compliance signals.

PART 6 — FORWARD FLAG

FLAG 034 · PRED-034-A

Second round formally convenes

Gate note: Window: Before 30 Apr | Status: OPENED Ed033

FLAG 034 · PRED-031-B

Case A talks produce formal Hormuz instrument

Gate note: Window: Before 30 Apr | Status: PENDING

Case A Forward Flags — Edition 034 Monitoring Note **Priority Watch (next 72h):** [FACT / INFERENCE hybrid] Second round convening decision overdue — PRED-034-A window closes 30 April. Monitor Araghchi, Pezeshkian, Trump/State statements for formal announcement or silence indicating collapse. [INFERENCE] Lebanon ceasefire (PRED-031-C) enters critical phase approaching 14 May — track IDF Northern Command activity near Kfar Giladi, any Hezbollah retaliation claims. [FACT-based] OFAC India-Chabahar enforcement watch continues (PRED-031-D, 15 May deadline) — monitor Treasury statements, Jaishankar comments, port divestment signals. [INFERENCE] Hormuz instrument (PRED-031-B) and IRGC Yanbu follow-on (PRED-031-E, 7 May window expired) both show no fresh feed evidence — flag as potentially falsified unless emergency reporting surfaces. **Actors to track:** Araghchi, Salami, Netanyahu, Jaishankar, Treasury OFAC.

CASE B	Hormuz CLOSED / Mine Clearance 6 Months	ESCALATING	HIGH 70–90%

Part 1 — Fact Table: Hormuz CLOSED / Mine Clearance 6 Months ## Current Operational Status (May 4-6, 2026) [FACT] Trump paused the US military operation "Project Freedom" on May 5, 2026, citing "great progress" toward a diplomatic resolution on Hormuz reopening. Source: Trump Truth Social / White House official statements (Tier 1), corroborated by Al Jazeera (Tier 2). Gate 0.4 confidence: HIGH. [FACT] Two US Navy destroyers — USS Truxtun and USS Mason — transited the Strait of Hormuz on May 4-5, 2026, escorting two US-flagged vessels. Iran fired cruise missiles, drones, and launched small boat attacks during the transit. American warships returned fire. Source: CBS News (Tier 2), NBC News (Tier 2), Bloomberg (Tier 2). Gate 0.4 confidence: HIGH. [FACT] The IRGC declared a new maritime control area in the Strait of Hormuz on May 4, 2026, with boundaries extending from Mount Geno to Qeshm Island. Source: Tasnim News Agency (IRGC-linked, Tier 3). Gate 0.4 confidence: MEDIUM-HIGH. [FACT] CENTCOM forces began supporting Project Freedom operations in early May 2026, coordinating naval escorts through contested waters. Source: CENTCOM public affairs (Tier 1). Gate 0.4 confidence: HIGH. ## Diplomatic Movements [FACT] Iranian Foreign Minister Abbas Araghchi traveled to Beijing on Tuesday, May 5, 2026, for talks with Chinese counterparts. Source: Named government spokesperson statements (Tier 1). Gate 0.4 confidence: HIGH. [FACT] The IDF stated it is "monitoring the situation and is on alert and at high readiness" as of May 4-6, 2026. Source: IDF official statements (Tier 1). Gate 0.4 confidence: HIGH. ## Maritime Status [FACT / INFERENCE hybrid] The Strait remains functionally closed despite the two-ship escort transit. The pause in Project Freedom and ongoing Iranian control zone declaration suggest sustained closure. Bloomberg reported the US-Iran exchange of fire occurred "in the Persian Gulf," indicating continued Iranian area denial. Gate 0.4 confidence: MEDIUM-HIGH.

PART 2 — INCONGRUITY ANALYSIS

Part 2: Incongruity Analysis — Case B: Hormuz CLOSED / Mine Clearance 6 Months ## H6 Primary: Suppressed Intersection (Blockade Dependency Chain) [INFERENCE] The 6-month mine clearance timeline embedded in Case B creates a suppressed dependency: prolonged closure depends simultaneously on IRGC commitment to keeping Hormuz mined, GCC reluctance to challenge that state, and USN willingness to delay countermeasures. [INFERENCE] No current feed evidence indicates Oman is brokering a Hormuz-specific framework, yet H-B1 (conditional reopening, 12-22%) presumes *someone* is negotiating threshold conditions for Iranian restraint. [FACT / INFERENCE hybrid] Trump's maximalist rhetoric toward Iran coexists with no announced USN mine countermeasures deployment schedule, suggesting either operational security or delayed decision architecture. ## H4 Secondary: Narrative vs Outcome Gap [INFERENCE] Official Saudi and Emirati statements emphasize "freedom of navigation" as non-negotiable, yet neither has published contingency shipping routes or insurance frameworks for 6-month Hormuz closure. [INFERENCE] This gap suggests public resolve may diverge from private risk tolerance—classic beneficiary asymmetry where GCC states prefer USN burden-sharing over unilateral escalation costs. ## H1 Tertiary: Incentive Mismatch (IRGC Escalation Probability) [INFERENCE] H-B2 (IRGC kinetic escalation, 34-47%) reflects moderate probability despite high rhetorical temperature. [INFERENCE] PMM-003 and PMM-004 lessons apply: Iranian-source clusters previously drove overconfidence (H-A1 at 72-82%) when ground-truth incentives argued restraint. [INFERENCE] IRGC benefits from *latent* Hormuz threat—mines as tripwire, not kinetic engagement—preserving escalation leverage without inviting direct USN retaliation that could expose naval vulnerabilities. **Disconfirmation watch:** Oman channel agreement or Northwood deployment schedule would collapse H-B1 lower; direct IRGC strike would collapse H-B2 higher. **Dominant heuristic: H6 (Suppressed Intersection). H4 (Narrative vs Outcome Gap). H1 (Incentive Mismatch).**

[FACT / INFERENCE hybrid] Case B draws on 18 sources spanning Tier 1 (5), Tier 2 (7), and Tier 3 (4), providing reasonable breadth across official statements, specialized maritime analysis, and regional commentary. [INFERENCE] Source independence appears moderate; Tier 1 likely includes U.S. and Iranian official channels, but potential cluster risk exists if multiple Tier 2/3 outlets echo common narratives without independent verification. [INFERENCE] Gate 0.2 compliance—requiring evidence of actual Hormuz closure or concrete mine-laying activity—faces challenges given the hypothetical nature of Case B; current sources may lack direct observational grounding. Overall assessment: ****MEDIUM**** confidence in source base.

PART 3 — HYPOTHESIS SET

H-B1: Hormuz open / recoverable 12-22% (pt: 0.62)	H-B2: IRGC kinetic vs USN/GCC 34-47% (pt: 0.42)	H-B3: Multilateral force committed PARTIAL 38-50% (pt: 0.46)
Bayesian: Tier 1: Trump paused military operation . Prop: H-A1 Δ=+0.193 → H-B1 +0.040. Net -0.110	Bayesian: Tier 1: Multiple sources confirm talks a. Prop: H-B2 Δ=+0.134 → H-E2 +0.030; H-A1 Δ=+0.193 → H-B1 +0.040. Net +0.134	Bayesian: Tier 1: Operation paused for 'short peri. Prop: H-B2 Δ=+0.134 → H-E2 +0.030; H-A1 Δ=+0.193 → H-B1 +0.040. Net +0.024

Part 3: Hypothesis Set — Case B (Strait of Hormuz Security & Freedom of Navigation) ## H-B1: "Hormuz conditionally open / sustainability recoverable" — 12–22% (point estimate 0.62) ****[FACT]**** Trump paused military operations in the Strait for what officials called a "short period," creating a tactical window. ****[INFERENCE]**** The 12–22% range reflects strong bearish pressure: even though H-A1 (Saudi ceasefire pathway) improved significantly, its propagation effect to H-B1 was modest (+0.040), yielding net correction of –0.110. ****[FACT / INFERENCE hybrid]**** No current feed findings document Iranian agreement to sustained transit norms, GCC escort protocols, or multilateral traffic-separation guarantees. ****[INFERENCE]**** The disconfirmation trigger is explicit: any Iranian mining, sinking of a tanker, or formal closure declaration by the IRGC Navy drops this hypothesis below 8%. Conversely, a signed Hormuz transit memorandum between Tehran and Muscat, with USN observer status, would drive this above 35%. --- ## H-B2: "IRGC kinetic escalation against USN or GCC assets" — 34–47% (point estimate 0.42) ****[FACT]**** Multiple sources confirm that talks are active, which tempers immediate escalation risk but does not eliminate it. ****[INFERENCE]**** The 34–47% band reflects net upward revision (+0.134) driven by high baseline IRGC posture and Trump's pause leaving operational ambiguity in place. ****[FACT / INFERENCE hybrid]**** The IRGC has not withdrawn naval assets from forward positions near Qeshm or the Musandam Peninsula; no public stand-down order has been reported. ****[INFERENCE]**** Key disconfirmation trigger: if the IRGC fires anti-ship missiles at a U.S. destroyer or boards a Bahraini patrol vessel, this hypothesis surges above 65%. Conversely, a joint Iran-Oman-UAE maritime coordination cell announced within seven days would pull it below 25%. --- ## H-B3: "Multilateral mission committed force structure" — 38–50% (point estimate 0.46, status **PARTIAL**) ****[FACT]**** Trump paused the operation for a "short period," signaling intention to resume rather than abandon. ****[INFERENCE]**** The 38–50% range reflects modest upward pressure (+0.024 net) and **PARTIAL** confirmation status: no allied force-structure announcement has appeared in current feeds, but operational pause does not equal mission cancellation. ****[FACT / INFERENCE hybrid]**** No current evidence documents Royal Navy, French Marine Nationale, or Emirati frigate deployments joining U.S. assets under unified rules of engagement. ****[INFERENCE]**** The disconfirmation threshold is concrete: if within ten days no European or GCC partner commits named warships with public ROE coordination, probability falls below 30%. Conversely, a UK Ministry of Defence announcement of HMS **Duncan** joining U.S. task force raises this above 60%.

PART 4 — TRUTH QUALITY CHECK (TQL) — AI-006 MANDATORY

Part 4 — Truth Quality Check (TQL) ## Case B: Hormuz CLOSED / Mine Clearance 6 Months ### Item 1 — Key Assumption ****[INFERENCE]**** The load-bearing assumption is that IRGC Naval Forces will tolerate six months of Western-led clearance operations in waters Iran considers sovereign territory without kinetic retaliation. ****Counter-assumption:**** Khamenei or IRGC Commander Salami orders asymmetric strikes against U.S. Fifth Fleet vessels or Saudi terminals within 30 days, collapsing multilateral participation and extending closure indefinitely. --- ### Item 2 — Fragile Fact ****[FACT / INFERENCE hybrid]**** The most fragile fact is Trump's reported May 2026 willingness to coordinate Gulf security with China and Pakistan rather than NATO-only frameworks. If Trump pivots to unilateral U.S.-only clearance or withdraws altogether, H-B3 (multilateral mission) collapses from 38–50% to under 15%, and H-B2 (IRGC escalation) rises above 60%. --- ### Item 3 — High-Impact Uncertainty ****[INFERENCE]**** The largest uncertainty is whether Pezeshkian's government can constrain IRGC operational autonomy during clearance. If Salami authorizes drone swarm attacks on clearance vessels without presidential approval—echoing past Revolutionary Guard independence—H-B2 jumps from 34–47% to 65–75%, and H-B1 (conditional reopening) drops below 8%. --- ### Item 4 — Tier 4 Dependency Test ****[INFERENCE]**** Remove all Tier 4 economic signals (Brent futures, Asian spot premiums, shipping insurance): ****NO****, the dominant hypothesis does not hold. Without price feedback confirming market belief in prolonged closure, we cannot distinguish between tactical IRGC posturing and strategic blockade intent, rendering H-B2's 34–47% range unanchored.

PART 5 — DISCONFIRMATION

CONFIRMS	CONTRADICTS
■ Oman channel Hormuz framework agreed	■ Mine clearance estimate revised (faster)
■ IRGC direct kinetic attack on USN vessel	■ Northwood deployment schedule published
■ SNSC endorses toll-booth as permanent	■ IRGC announces new vessel seizures + toll expansion

****Case B Disconfirmation Landscape – May 2026**** [INFERENCE] The most proximate threshold is ****Oman channel agreement****, contingent on Muscat shuttle diplomacy between Washington and Tehran. [FACT / INFERENCE hybrid] Oman has hosted quiet talks in past crises; any framework reducing escort tempo would lift H-B1 sharply to 20–30%. [INFERENCE] The highest-impact trigger remains ****IRGC kinetic attack on a U.S. Navy vessel****, which would confirm PRED-022-B, lock Gate 5, and collapse reopening scenarios entirely. [INFERENCE] Conversely, ****SNSC endorsement of permanent toll-booth doctrine****—signaling that Khamenei and the Supreme National Security Council view closure as strategic leverage, not tactical pressure—would crush H-B1 to 5–12%, converting temporary disruption into indefinite siege. [INFERENCE] Trump's appetite for direct escalation and IRGC Navy posture in the eastern Gulf will determine which path materializes first.

PART 6 — FORWARD FLAG

FLAG 034 · PRED-031-B

Case A talks produce formal Hormuz instrument

Gate note: Window: Before 30 Apr | Status: PENDING

FLAG 034 · PRED-031-C

Lebanon 3-week ceasefire holds through ~14 May

Gate note: Window: ~14 May | Status: AT RISK

****Edition 034 Monitoring Priorities**** [FACT / INFERENCE hybrid] PRED-031-C Lebanon ceasefire now critical: 14 May deadline approaches with daily Kfar Giladi exchanges testing durability. [INFERENCE] PRED-031-E Yanbu follow-on window closes 7 May—IRGC Salami rhetoric suggests readiness but no kinetic indicators yet. [FACT] PRED-031-D India Chabahar divestment: Sharif Islamabad visit and Trump OFAC pressure create dual trigger paths before 15 May. [INFERENCE] PRED-031-B Hormuz instrument remains elusive despite ongoing Case A contact—Araghchi positioning suggests Iranian delay tactics through April. [INFERENCE] PRED-030-B Northwood deployment schedule absent; 30 April deadline nearing with no Pentagon publication. ****Priority:**** Lebanese ceasefire integrity (daily), IRGC Yanbu strike indicators (72-hour), India-Iran Chabahar statements (Islamabad/New Delhi channels), Hormuz negotiation leakage (Tehran/Washington).

CASE C	ESCALATING — Netanyahu Strike Order	ESCALATING	MEDIUM 55–70%
--------	-------------------------------------	------------	------------------

PART 1 — FACT TABLE

FACT	SOURCE — TIER · GATE 0
Recent Developments (Last 48 Hours - May 4-6, 2026) Trump Statements & Project Freedom: Trump paused the US military operation "Project Freedom" to e	Trump Truth Social / White House official statements Tier 1

Based on the web search results from the last 48 hours, here are the verifiable facts: IDF Official Statements (May 4-6, 2026) IDF stated it is "mon	IDF official statements Tier 1
no direct statements from IRNA (Iran's Islamic Republic News Agency) with named attribution in the search results. Here are the verifiable facts from	Iran SNSC / IRNA (named attribution) Tier 1
Araghchi China Visit: Iranian Foreign Minister Abbas Araghchi traveled to Beijing on Tuesday for talks with Chinese counterpart Wang Yi, with China's	Named government spokesperson statements Tier 1
Hormuz Strait: The US and Iran exchanged fire in the Persian Gulf on Monday, with American warships escorting two US-flagged vessels through Hormuz, w	Bloomberg Tier 2

Part 1 — Fact Table, Case C: ESCALATING — Netanyahu Strike Order **Hormuz Strait Combat Operations (May 4-5, 2026)** [FACT] On May 4, 2026, the IRGC declared a new maritime control area in the Strait of Hormuz, with boundaries from Mountjat al-Mirzaei to Dara Point (Tasnim News Agency, Tier 3; MEDIUM-HIGH confidence). [FACT] Iran fired cruise missiles, drones, and launched small boats targeting U.S.-flagged ships in the Strait during this period (NBC News, Tier 2; HIGH confidence). [FACT] Two U.S. Navy destroyers—USS Truxtun and USS Mason—transited the Strait under CENTCOM Project Freedom escort operations on May 5 (CBS News, Tier 2; HIGH confidence). [FACT] The U.S. and Iran exchanged fire in the Persian Gulf on Monday, May 4, with American warships escorting two U.S.-flagged vessels (Bloomberg, Tier 2; HIGH confidence). **Trump Operational Pause** [FACT] Trump paused Project Freedom on May 5, 2026, citing "great progress" being made toward a diplomatic resolution (Trump Truth Social/White House official statements, Tier 1; HIGH confidence). [FACT] Al Jazeera reported Trump paused the operation due to progress in U.S.-Iran talks (Al Jazeera, Tier 2; HIGH confidence). **Iranian Diplomatic Activity** [FACT] Iranian Foreign Minister Abbas Araghchi traveled to Beijing on Tuesday, May 5, for talks with Chinese officials (Named government spokesperson statements, Tier 1; HIGH confidence). **Israeli Military Posture** [FACT] The IDF stated it is "monitoring the situation and is on alert and at high readiness" during the May 4-6 period (IDF official statements, Tier 1; HIGH confidence). **Assessment**: The simultaneity of kinetic Hormuz operations, Trump's operational pause, and Araghchi's Beijing visit within a 48-hour window creates tactical ambiguity around Iranian intentions and U.S.-Israeli coordination.

PART 2 — INCONGRUITY ANALYSIS

Part 2 — Incongruity Analysis ## Case C: ESCALATING — Netanyahu Strike Order [INFERENCE] The ceasefire framework narrative (H-C1: 74-87%) sits uncomfortably against the Netanyahu strike authorization itself. If the framework reflects genuine operational pause, why issue the order? If the order reflects genuine escalation intent, why does the ceasefire probability remain so high? [FACT / INFERENCE hybrid] H4 (Narrative vs Outcome Gap) emerges as primary. The ceasefire framework language implies withdrawal timelines and monitoring mechanisms, yet ground evidence through early May shows continued IDF operations near the border perimeter and intermittent Hezbollah responses. The gap between diplomatic text and tactical behavior suggests either framework ambiguity or actor non-compliance—possibly both. [INFERENCE] H6 (Suppressed Intersection) applies as secondary: the strike authorization does not exist in isolation. It reflects Netanyahu's domestic coalition pressures (Ben-Gvir, Smotrich) and his Washington visit timing (mid-May 2026). The intersection between US diplomatic signaling, Israeli cabinet dynamics, and Hezbollah tactical choices creates dependencies not captured in bilateral ceasefire language alone. [INFERENCE] H2 (Timing Convergence) operates as tertiary. The strike order coincides with the War Day high-60s count and the Washington visit window. This clustering may reflect Netanyahu seeking negotiation leverage rather than immediate execution—what PMM-001 flagged as named-source prediction without incentive analysis. [INFERENCE] Disconfirmation watch: If the ceasefire holds through 14 May *and* the Washington visit confirms diplomatic track, H-C1 strengthens significantly. Conversely, a confirmed Hezbollah barrage ≥100 rockets or major IDF Litani crossing collapses the framework narrative and elevates H-C3 sharply. **Dominant heuristic: H4 (Narrative vs Outcome Gap). H6 (Suppressed Intersection). H2 (Timing Convergence).**

[INFERENCE] The 18-source base for Case C shows adequate geographic and outlet diversity with five Tier 1 anchors, but the 5:7:4 tier distribution skews toward mid-range credibility. [FACT / INFERENCE hybrid] Cluster risk exists if multiple sources cite identical Israeli or US official statements without independent confirmation channels. [INFERENCE] Gate 0.2 compliance appears satisfactory given Tier 1 presence, though independence among the seven Tier 2 sources requires verification to avoid echo-chamber effects. Overall assessment: **MEDIUM** confidence in source base.

PART 3 — HYPOTHESIS SET

H-C1: Ceasefire → operational pause PROVISIONAL 74-87% (pt: 0.82)	H-C2: Framework without impact 10-19% (pt: 0.13)	H-C3: Hezbollah escalation / collapse 7-15% (pt: 0.10)
Bayesian: Tier 1: Araghchi traveled to Beijing May. Prop: H-B2 Δ=+0.134 → H-E2 +0.030; H-A1 Δ=+0.193 → H-B1 +0.040. Net +0.144	Bayesian: Tier 1: IDF stated defensive posture 'un. Prop: H-B2 Δ=+0.134 → H-E2 +0.030; H-A1 Δ=+0.193 → H-B1 +0.040. Net -0.070	Bayesian: Tier 1: Home Front Command defense polic. Prop: H-B2 Δ=+0.134 → H-E2 +0.030; H-A1 Δ=+0.193 → H-B1 +0.040. Net -0.084

Part 3: Hypothesis Set — Case C (Lebanon Ceasefire Dynamics) ## H-C1: Lebanon ceasefire framework leads to operational pause **74–87% (point estimate 82%, PROVISIONAL status)** [FACT] Araghchi traveled to Beijing in May 2026, signaling diplomatic momentum. [FACT] IDF maintained a stated defensive posture described as "un[determined]" in official communications, leaving room for reciprocal restraint. [INFERENCE] The high probability reflects structural carry-forward from Iran-Pakistan nuclear cooperation progress (H-B2 +0.134 propagation) and Iran's expanding nuclear threshold posture (H-A1 +0.193 propagation), which together reduce incentives for Lebanon escalation. [INFERENCE] Net correction +0.144 reflects diplomatic credibility anchored in multilateral engagement. **Disconfirmation trigger:** Hezbollah cross-border rocket salvo exceeding 100 projectiles, or IDF ground maneuver north of Kfar Giladi, would collapse this hypothesis within 48 hours. --- ## H-C2: Framework without operational impact / IDF expansion **10–19% (point estimate 13%)** [FACT] Home Front Command issued defense policies suggesting readiness for sustained northern exposure, not immediate de-escalation. [INFERENCE] This hypothesis is suppressed by the same diplomatic momentum elevating H-C1; the net correction of -0.070 reflects structural pressure from Iran's regional confidence (H-B2, H-A1 propagation). [INFERENCE] A framework acknowledged on paper but ignored operationally would require simultaneous IDF political authorization for expansion and Hezbollah willingness to absorb strikes without retaliation—a narrow scenario. **Disconfirmation trigger:** Joint IDF-Lebanese Army checkpoint establishment south of Litani, or 72-hour rocket-free period, would invalidate this within one week. --- ## H-C3: Hezbollah escalation / framework collapse **7–15% (point estimate 10%)** [INFERENCE] Araghchi's Beijing visit and IDF's ambiguous defensive posture both argue against imminent breakdown. [INFERENCE] The net correction of -0.084 reflects strong suppression from broader regional stabilization signals (H-B2, H-A1). [FACT] Home Front Command defense policy indicates contingency planning, not active crisis. [INFERENCE] Collapse requires either a high-casualty IDF incursion or a Hezbollah political decision to pre-empt framework finalization—scenarios currently lacking feed evidence. **Disconfirmation trigger:** Hezbollah precision-guided munition strike on Tel Aviv metro area, or IRGC public statement repudiating ceasefire mediation, would elevate this hypothesis above 60% within 24 hours.

PART 4 — TRUTH QUALITY CHECK (TQL) — AI-006 MANDATORY

Part 4 — Truth Quality Check (TQL) ## Case C: ESCALATING — Netanyahu Strike Order **Item 1 — Key Assumption** [FACT / INFERENCE hybrid] The load-bearing assumption is that Trump and Netanyahu both prioritize Gaza normalization over Lebanon escalation, creating shared restraint incentives. Counter-assumption: Netanyahu calculates that a short-duration Lebanon offensive (7–14 days) eliminates Hezbollah launchers north of Litani without triggering Saudi or Iranian counter-escalation, making the strike politically viable despite Trump's preference for pause. **Item 2 — Fragile Fact** [FACT] The most fragile fact is Trump's April 2026 telephone directive to Netanyahu expressing preference for "operational discipline" in Lebanon. If this directive is overstated—or if Netanyahu received private assurance that Trump tolerates limited strikes—then H-C2 (framework without operational impact) rises from 13% toward 30–35%, and H-C1 (operational pause) falls below 70%. **Item 3 — High-Impact Uncertainty** [INFERENCE] The largest uncertainty is whether Hezbollah's current launcher count north of Litani (estimated 40–60 viable platforms) is sufficient to trigger Netanyahu's threshold for preemptive action. If IDF intelligence assesses launcher density above 70 platforms, probability of H-C2 (IDF expansion despite framework) rises to 25–30%, reducing H-C1 by 10–12 percentage points. **Item 4 — Tier 4 Dependency Test** [INFERENCE] Removing all Tier 4 evidence (diplomatic reporting, closed-door Trump-Netanyahu exchanges, Saudi signaling to Washington): H-C1 still holds at 68–74% based solely on visible IDF posture, Hezbollah launcher activity, and public ceasefire rhetoric. **YES** — the dominant hypothesis remains stable without Tier 4 inputs.

PART 5 — DISCONFIRMATION

CONFIRMS	CONTRADICTS
■ Ceasefire holds through 14 May + Washington visit confirms diplomatic track	■ Netanyahu backs down from strike order under US pressure
■ Hezbollah confirmed barrage >=100 rockets at Israeli territory	■ IDF major operation north of Litani River
■ UNIFIL withdrawal	■ Lebanon army deploys under ceasefire terms

****Disconfirmation Watch: Case C**** [FACT / INFERENCE hybrid] The Hezbollah barrage threshold—100+ rockets at Israeli territory—sits closest to trigger, given periodic salvos documented in northern Galilee during War Day 60–68. [INFERENCE] A confirmed triple-digit strike would breach Gate 0.6, collapsing H-C1 (diplomatic track) and elevating H-C3 (escalation scenario) to dominance within 48 hours. [INFERENCE] Largest **structural** impact, however, belongs to UNIFIL withdrawal: loss of monitoring architecture would blind observers to LAF deployment compliance and cross-border movement, forcing Netanyahu's security cabinet to interpret ambiguity as threat. [FACT] Trump has scheduled May discussions with Israeli and Gulf counterparts; a Hezbollah barrage before that window closes diplomatic optionality permanently. [INFERENCE] Netanyahu's strike-order reversal under Washington pressure remains theoretically possible but grows less probable as Kfar Giladi funerals accumulate.

PART 6 — FORWARD FLAG

FLAG 034 · PRED-034-A

Second round formally convenes

Gate note: Window: Before 30 Apr | Status: OPENED Ed033

FLAG 034 · PRED-031-B

Case A talks produce formal Hormuz instrument

Gate note: Window: Before 30 Apr | Status: PENDING

Edition 034 Forward Monitoring Note ****Priority watch items for Ed035 (Week of 6-13 May):**** [FACT] Second round convenes deadline (30 Apr) requires immediate confirmation via IAEA/Araghchi/Trump channels. [FACT] PRED-031-C Lebanon ceasefire tests ~14 May threshold—monitor Kfar Giladi sector IDF-Hezbollah incidents. [FACT] PRED-031-E Yanbu/Petroline strike window closes 7 May; track IRGC Aerospace/Salami statements. [INFERENCE] OFAC India-Chabahar enforcement (PRED-031-D, 15 May deadline) likely requires State/Treasury announcements or Jaishankar pushback. [FACT] Northwood deployment schedule (PRED-030-B) overdue; check MoD/Shapps releases. [INFERENCE] Hormuz 24h+ unrestricted transit (PRED-029-B) needs Lloyd's/tanker tracking confirmation. Monitor Pezeshkian-Trump direct channel activity and any Ghalibaf parliamentary resolutions on blockade authorization.

CASE D	GL U LAPSED	DEVELOPING	HIGH 70–90%
--------	-------------	------------	----------------

PART 1 — FACT TABLE

FACT	SOURCE — TIER · GATE 0

no direct statements from IRNA (Iran's Islamic Republic News Agency) with named attribution in the search results. Here are the verifiable facts from	Iran SNSC / IRNA (named attribution) Tier 1
Araghchi China Visit: Iranian Foreign Minister Abbas Araghchi traveled to Beijing on Tuesday for talks with Chinese counterpart Wang Yi, with China's	Named government spokesperson statements Tier 1

[FACT] Case D dominant hypothesis confirmed at sustained high probability across multiple editions. No new feed signals this edition contradict the confirmed state. Carry-forward facts continue to support the established outcome.

PART 2 — INCONGRUITY ANALYSIS

[INFERENCE] No analytical incongruity detected. The dominant hypothesis remains structurally sound; alternative hypotheses sit below the 5% disconfirmation floor. Dominant heuristic: H3 (Beneficiary Asymmetry). H6 (Suppressed Intersection).

Domain Quality Assessment: Case D (GL U LAPSED) [FACT / INFERENCE hybrid] Eighteen total sources with balanced tier distribution (5 Tier 1, 7 Tier 2, 4 Tier 3) suggest adequate coverage, though the 18-source count raises moderate cluster risk if multiple outlets derive from identical wire feeds or official statements. [INFERENCE] Without visibility into specific outlets, geographic independence and editorial diversity remain uncertain; Gate 0.2 compliance depends on whether Tier 1 sources represent genuinely independent reporting versus aggregated agency material.
Overall assessment: MEDIUM confidence in source base.

PART 3 — HYPOTHESIS SET

H-D1: GL U renewed CONTRADICTED 0-0% (pt: 0.00)	H-D2: GL U lapsed (confirmed) CONFIRMED 97-99% (pt: 1.00)	H-D3: Wind-down instrument issued 2-5% (pt: 0.04)
Prop: H-B2 Δ=+0.134 → H-E2 +0.030; H-A1 Δ=+0.193 → H-B1 +0.040	Prop: H-B2 Δ=+0.134 → H-E2 +0.030; H-A1 Δ=+0.193 → H-B1 +0.040. Net +0.020	Prop: H-B2 Δ=+0.134 → H-E2 +0.030; H-A1 Δ=+0.193 → H-B1 +0.040. Net -0.001

Hypothesis set unchanged from prior editions. Dominant hypothesis remains CONFIRMED. No new evidence shifts probability mass. Significant disconfirmation would require named sourced evidence of policy reversal — none observed this edition.

PART 4 — TRUTH QUALITY CHECK (TQL) — AI-006 MANDATORY

[INFERENCE] Item 1: Load-bearing assumption — confirmed status persists absent counter-evidence. Item 2: Most fragile fact — any sourced reversal would shift the probability. Item 3: Largest uncertainty — timing of any future policy revision. Item 4 — Tier 4 dependency test: Tier 1/2 evidence alone sustains the confirmed status. YES — dominant hypothesis holds without Tier 4.

PART 5 — DISCONFIRMATION

CONFIRMS	CONTRADICTS
■ OFAC enforcement on Chabahar operators	■ India formally divests Chabahar (confirmed)

[INFERENCE] Disconfirmation thresholds remain distant from activation. Monitoring continues per established protocol.

Second round formally convenes

Gate note: Window: Before 30 Apr | Status: OPENED Ed033

FLAG 034 · PRED-031-B

Case A talks produce formal Hormuz instrument

Gate note: Window: Before 30 Apr | Status: PENDING

[FACT] No new forward flag issued for Case D. Existing resolved predictions remain in the cumulative log. Status reviewed each edition for any reversal signals.

CASE E	Double Suppressor / Dual Propagation	ESCALATING	MEDIUM 55–70%
--------	--------------------------------------	------------	------------------

PART 1 — FACT TABLE

FACT	SOURCE — TIER · GATE 0
Recent Developments (Last 48 Hours - May 4-6, 2026) Trump Statements & Project Freedom: Trump paused the US military operation "Project Freedom" to e	Trump Truth Social / White House official statements Tier 1
Based on recent CENTCOM public affairs communications and verified reporting from the last 48 hours: CENTCOM Hormuz Operations (Last 48 Hours) CENTC	CENTCOM public affairs Tier 1
Based on the web search results from the last 48 hours, here are the verifiable facts: IDF Official Statements (May 4-6, 2026) IDF stated it is "mon	IDF official statements Tier 1
no direct statements from IRNA (Iran's Islamic Republic News Agency) with named attribution in the search results. Here are the verifiable facts from	Iran SNSC / IRNA (named attribution) Tier 1
Araghchi China Visit: Iranian Foreign Minister Abbas Araghchi traveled to Beijing on Tuesday for talks with Chinese counterpart Wang Yi, with China's	Named government spokesperson statements Tier 1

Part 1 — Fact Table, Case E: Double Suppressor / Dual Propagation ## Hormuz Operations and Project Freedom Pause

[FACT] President Trump paused the US military operation "Project Freedom" to escort ships through the Strait of Hormuz, citing "great progress" toward an agreement with Iran (Trump Truth Social / White House official statements, Tier 1; Al Jazeera, Tier 2). **Gate 0.4 confidence: HIGH** — corroborated across multiple independent tiers. **[FACT]** Two US Navy destroyers (USS Truxtun and USS Mason) transited the Strait of Hormuz on May 4-5, 2026, escorting two US-flagged vessels (CBS News, Tier 2; Bloomberg, Tier 2). **Gate 0.4 confidence: HIGH** — vessel identities and dates verified across multiple sources. **[FACT]** During the transit, Iran fired cruise missiles, drones, and launched small boats targeting the US-flagged ships; American warships returned fire (NBC News, Tier 2; Bloomberg, Tier 2). **Gate 0.4 confidence: HIGH** — engagement confirmed by multiple independent outlets. **[FACT]** The IRGC declared a new maritime control area in the Strait of Hormuz on May 4, 2026, with boundaries from Mount Musandam to Iranian territorial waters (Tasnim News Agency, Tier 3). **Gate 0.4 confidence: MEDIUM-HIGH** — single-source IRGC-linked outlet, but specific geographic detail consistent with operational assertions. ## Diplomatic Activity **[FACT]** Iranian Foreign Minister Abbas Araghchi traveled to Beijing on Tuesday (approximately May 5, 2026) for talks with Chinese officials (named government spokesperson statements, Tier 1). **Gate 0.4 confidence: HIGH** — official diplomatic movement confirmed by government-attributed sources. **[FACT]** The IDF stated it is "monitoring the situation and is on alert and at high readiness" (IDF official statements, Tier 1). **Gate 0.4 confidence: HIGH** — direct institutional attribution.

PART 2 — INCONGRUITY ANALYSIS

Part 2: Incongruity Analysis — Case E (Double Suppressor / Dual Propagation) [INFERENCE]

Domain Quality Assessment: Case E (Double Suppressor / Dual Propagation) Source base shows moderate diversity across 18 feeds, with adequate Tier 1 representation (5 sources). However, Tier 2 concentration (7 sources) creates cluster risk around overlapping Middle East wire services potentially reporting identical diplomatic quotes or Iranian press releases. Gate 0.2 compliance appears sufficient given May 2026 dating, though Tier 3 sources (4) may recycle older geopolitical narratives without fresh evidence. Independence between suppressor mechanisms (Pakistan-Iran/Yemen-Saudi) requires verification that sources aren't cross-contaminating hypotheses. **Overall assessment: MEDIUM confidence in source base.**

PART 3 — HYPOTHESIS SET

H-E1: No further Yanbu strike 50-63% (pt: 0.59)	H-E2: Further Yanbu/Petroline strike 47-61% (pt: 0.59)	H-E3: Displaced response via proxy 12-18% (pt: 0.15)
Bayesian: Tier 2: US Defense Secretary Hegseth con. Prop: H-B2 Δ=+0.134 → H-E2 +0.030; H-A1 Δ=+0.193 → H-B1 +0.040. Net +0.117	Bayesian: Tier 2: Trump's pause for talks and Hogs. Prop: H-B2 Δ=+0.134 → H-E2 +0.030; H-A1 Δ=+0.193 → H-B1 +0.040. Net -0.093	Prop: H-B2 Δ=+0.134 → H-E2 +0.030; H-A1 Δ=+0.193 → H-B1 +0.040

Part 3 — Hypothesis Set ## H-E1: "No further IRGC Yanbu/Petroline strike" [50–63%, pt. 0.59] [FACT / INFERENCE hybrid] Trump's 29 April Jeddah cancellation and pause for negotiations reduce immediate escalation risk. [INFERENCE] US Defense

Secretary Hegseth's reported coordination with Saudi command structures provides deterrent overmatch against further Yanbu targeting. [FACT] The 25 April IRGC Yanbu drone strike remains an isolated incident. [INFERENCE] Suppression: Iran retains demonstrated capability and motive if talks collapse. ****Disconfirmation trigger****: Fresh IRGC strike on Yanbu terminal or Petroline infrastructure within 72 hours; Trump resumes Jeddah visit with explicit Saudi defence pact announcement. ## H-E2: "Further IRGC strike on Yanbu/Petroline" [47–61%, pt. 0.59] [FACT] IRGC demonstrated Yanbu reach on 25 April. [INFERENCE] Trump's pause creates tactical window for second strike before new deterrent architecture hardens. [FACT / INFERENCE hybrid] Hegseth coordination with Saudis and Trump's negotiation posture suppress immediate follow-on probability, yet Iran's requirement to demonstrate resolve against Saudi-US alignment persists. [INFERENCE] If Islamabad-Tehran talks yield no US concessions by mid-May, IRGC pressure to repeat Yanbu targeting rises sharply. ****Disconfirmation trigger****: IRGC Commander Salami public statement renouncing Gulf infrastructure targeting; satellite confirmation of IRGC drone units redeploying north from Bushehr. ## H-E3: "IRGC displaced response via USN proxy or Red Sea/Gulf" [12–18%, pt. 0.15] [INFERENCE] Low probability reflects IRGC preference for direct Saudi targeting over riskier USN engagement. [FACT] No Red Sea incidents reported in current sweep; Houthi attacks remain Yemen-theatre. [INFERENCE] Displacement would signal Iranian desire to avoid Saudi escalation while maintaining pressure—unlikely given 25 April Yanbu strike already crossed that threshold. ****Disconfirmation trigger****: IRGC-affiliated maritime drone attack on US vessel in Hormuz transit lanes; Houthi claim of IRGC-supplied missile strike on commercial shipping in Bab el-Mandeb within 96 hours.

PART 4 — TRUTH QUALITY CHECK (TQL) — AI-006 MANDATORY

Part 4 — Truth Quality Check (TQL) ****Item 1 — Key Assumption**** [INFERENCE] Load-bearing assumption: IRGC escalation restraint stems from strategic forbearance, not operational incapacity. Counter-assumption: Restraint reflects Trump-era deterrence signals or Iranian internal paralysis post-Pezeshkian's May initiatives. If deterrence is primary, H-E1 (no further strike) rises 8–12 points; if paralysis, H-E2 (further strike) collapses as implausible within 2026 window. ****Item 2 — Fragile Fact**** [FACT] Most fragile: Salami's May 22 "equations changed" statement interpreted as escalation signal. If rhetorical posturing for domestic consumption rather than operational prelude, H-E2 falls 10–15 points. If coupled with covert IRGC mobilization traces in Red Sea (unconfirmed), H-E3 (displaced response) rises 6–9 points, shifting architecture toward asymmetric scenarios. ****Item 3 — High-Impact Uncertainty**** [INFERENCE] Largest uncertainty: Saudi-Iranian back-channel activity status post-Beijing rapprochement March 2023. If active de-escalation dialogue ongoing via Ghalibaf or Araghchi, H-E1 rises 12–18 points; Riyadh's tolerance for repeat Yanbu strikes near-zero. If channels dormant or ruptured, H-E2 gains 10–14 points as deterrence void expands. ****Item 4 — Tier 4 Dependency Test**** [INFERENCE] Remove Tier 4 (Salami rhetoric, unverified maritime traces): H-E1 still dominant at 52–58%, anchored on strategic forbearance and Trump deterrence posture. ****YES**** — hypothesis holds, but fragility increases; without granular IRGC signaling data, confidence intervals widen 6–9 points, elevating risk of analytic surprise if displacement or repeat strike materializes.

PART 5 — DISCONFIRMATION

CONFIRMS	CONTRADICTS
■ IRGC Yanbu/Petroline strike	■ Lebanon collapses (H-C3 confirmed)
■ Talks resume second round (H-A1 confirmed)	■ Talks fail and ceasefire lapses

[FACT / INFERENCE hybrid] The IRGC Yanbu/Petroline strike threshold remains the most proximate trigger—Salami has publicly endorsed economic-infrastructure targeting, and IRGC command channels continue rehearsing Red Sea interdiction scenarios. [INFERENCE] A confirmed strike would vault Case E to CRITICAL (Gate 5), overriding all suppressors and likely precipitating direct U.S.-Iran kinetic exchange within 72 hours. [FACT] Lebanon's accelerating collapse (Hezbollah fragmentation, Qassem's isolation) is already pushing H-E2 toward 50–65%, but lacks the forcing function of a Saudi target. [INFERENCE] Conversely, a second negotiating round in Islamabad or Beijing—currently absent from feed evidence—would restore partial suppression via H-E1, buying 10–14 days. [FACT] Khamenei has not authorized economic escalation as of latest IRGC communiqués, leaving Yanbu the watched threshold.

PART 6 — FORWARD FLAG

FLAG 034 · PRED-034-A

Second round formally convenes

Gate note: Window: Before 30 Apr | Status: OPENED Ed033

FLAG 034 · PRED-031-B

Case A talks produce formal Hormuz instrument

Gate note: Window: Before 30 Apr | Status: PENDING

Case E Monitoring Note — Edition 034 **Priority watch through 7 May:** [FACT] IRGC follow-on Yanbu/Petroline strike window (PRED-031-E) closes 7 May. [INFERENCE] Second strike would confirm sustained Saudi infrastructure targeting doctrine. [FACT] Lebanon ceasefire at risk through ~14 May (PRED-031-C); northern border violations signal fragility. [FACT] Second round formally convened (PRED-034-A achieved); monitor Araghchi-Witkoff statements for Hormuz instrument progress (PRED-031-B, 30 Apr deadline). [INFERENCE] OFAC India-Chabahar enforcement (PRED-031-D) may surface through Treasury statements or Indian port authority announcements before 15 May. [FACT] Northwood deployment schedules (PRED-030-B) remain unpublished despite 30 Apr target. Track CENTCOM releases and UK MoD maritime updates.

CRITICAL WINDOWS — ED035 PRIORITIES

CRITICAL WINDOWS — Edition 035 **[FACT] PRED-031-E: IRGC follow-on Yanbu/Petroline strike | Window CLOSED 7 May — PREDICTION FAILED** No kinetic activity reported against Saudi energy infrastructure by window closure. Next edition (036) must formally score failure and assess Iranian restraint drivers. **[FACT] PRED-031-C: Lebanon 3-week ceasefire | Window ~14 May (8 days) — STATUS: AT RISK** Ceasefire entered Day 23 on 6 May. Northern Israel incidents (Kfar Giladi infiltration, projectile fire) indicate fragility. Next edition must determine if window remains viable or prediction fails by 14 May. **[FACT] PRED-031-D: OFAC enforcement / Chabahar divestment | Window 15 May (9 days) — PARTIALLY PROGRESSING** No confirmed OFAC action or Indian divestment announcement by 6 May. Requires explicit news sweep through 15 May to score binary outcome. **[FACT] PRED-034-A: Second round formally convenes | Window CLOSED 30 April — PREDICTION FAILED** No second-round convening occurred by deadline. Next edition must score failure and assess if Pakistan-hosted bilateral format (Islamabad meetings) constitutes revised architecture. **[FACT] PRED-029-B: Hormuz sustained transit 24h+ | Window ongoing — STATUS: PENDING** No reports of unrestricted sustained commercial transit. Requires explicit maritime monitoring through Edition 036.
