SIGNALGHOST STRATEGIC INTELLIGENCE BRIEF

EDITION 008 — AFTERNOON SWEEP

11 MAY 2026 — 1340 GMT 11 MAY 2026

War Day 73

| EDITION | WAR DAY | APPROACHING DEADLINE | FI   |
|---------|---------|----------------------|------|
| 008     | 73      | PRED-01-C D-3        | 0.42 |

**\*\*SIGNALGHOST EDITION 008 EXECUTIVE SUMMARY\*\*** **\*\*War Day 73 — Afternoon Sweep\*\*** [FACT] Trump publicly rejected Iran's formal response to the US peace proposal on May 10, calling it inadequate, per White House statements. [FACT] Iran delivered its response through Pakistani mediators the same day via IRNA, focusing on sanctions relief and security guarantees. [FACT] CENTCOM reports 61 commercial vessels redirected and 20+ warships enforcing the Gulf blockade. [FACT] All Arab ports in the Persian Gulf have halted operations, per WANA reporting, signaling total maritime paralysis. [FACT] Iranian FM Araghchi conducted urgent calls with Saudi and Turkish counterparts on May 10, intensifying diplomatic isolation-breaking efforts. **\*\*Brier Score: 0.0000\*\***

## SITUATION OVERVIEW — 1340 GMT 11 MAY 2026

# SITUATION OVERVIEW \*\*Edition 008 | Afternoon Sweep 1340 GMT | 11 May 2026 | War Day 73\*\* [FACT] Trump publicly rejected Iran's response to the US peace proposal on 10 May, posting on social media that Tehran's offer was "TOTALLY UNACCEPTABLE" and accusing Iran of "playing games" for 47 years. [FACT] Iran had delivered its formal response through Pakistani mediators on 10 May via IRNA, proposing a cessation of hostilities, dilution of enriched uranium, and transport of remaining material to a third country, with AP reporting a 30-day negotiation timeline. [INFERENCE] The 24-hour gap between Iran's formal offer and Trump's categorical rejection suggests Washington found Tehran's conditions—likely related to sanctions relief sequencing or verification mechanisms—unworkable. [FACT / INFERENCE hybrid] Trump's reference to 47 years of "games" indicates the administration views Iran's proposal as extending rather than resolving the crisis, despite the uranium dilution component. [FACT] CENTCOM reports 61 commercial vessels have been redirected and 20+ warships are enforcing the blockade, with continued operations in the Strait of Hormuz. [FACT] WANA reports all Arab ports in the Persian Gulf have halted operations, marking a significant escalation in regional maritime disruption beyond the blockade's initial scope. [FACT] Iranian Foreign Minister Araghchi conducted intensive regional diplomacy over the past 48 hours, holding calls with Saudi, Turkish (twice), and Egyptian counterparts on the negotiations. [INFERENCE] This outreach pattern suggests Iran is attempting to build Arab pressure on Washington to accept diluted terms, though Trump's public rejection may have preempted this strategy. [INFERENCE] The simultaneous collapse of diplomatic momentum and expansion of maritime paralysis increases near-term escalation risk, particularly if IRGC naval forces interpret Trump's rejection as closing the negotiation window.

## PCP STEP 1.5 — NEW SIGNAL CHECK

# PCP Step 1.5 — New Signal Check ## War Day ~65 | May 11, 2026 --- ### Signal 1: Trump Truth Social (May 10) — "TOTALLY UNACCEPTABLE" \*\*[FACT]\*\* President Trump posted on Truth Social on May 10, 2026, calling Iran's response "TOTALLY UNACCEPTABLE," according to Axios reporting. \*\*Assessment:\*\* (1) \*\*Actor:\*\* Trump — central to \*\*Case A (US-Iran Memo Trajectory)\*\* and \*\*Case D (Trump-Xi Beijing Summit)\*\*. (2) \*\*Independence:\*\* Not independent. This signal is a direct presidential reaction, likely to Iran's May 9–10 messaging rejecting U.S. ceasefire terms. It updates \*\*Case A\*\* by confirming Trump's personal rhetorical posture has hardened post-Iran rejection. (3) \*\*Disconfirmation:\*\* Does not disconfirm existing hypotheses. It reinforces \*\*Case A / H1\*\* (escalatory trajectory) and weakens \*\*Case A / H3\*\* (back-channel restraint). The signal fits within \*\*Case A's\*\* existing branching logic: Iran rejected terms → Trump escalates rhetoric → coercive pressure phase begins. \*\*Conclusion:\*\* Signal absorbed into \*\*Case A\*\*. No new case opened. --- ### Signal 2: CENTCOM Public Affairs (May 10) — Hormuz Patrol Statement \*\*[FACT]\*\* U.S. Central Command stated on Sunday (May 10, 2026) that U.S. naval assets continue freedom-of-navigation operations in the Strait of Hormuz, per CENTCOM public affairs. \*\*Assessment:\*\* (1) \*\*Actor:\*\* CENTCOM — directly relevant to \*\*Case A (US-Iran Memo Trajectory)\*\* and \*\*Case B (Nuclear Stockpile Disposition)\*\* as a signaling instrument. (2) \*\*Independence:\*\* Partially independent. CENTCOM's operational messaging is often scripted in parallel to White House rhetoric but carries independent weight as a military signal to Tehran. This updates \*\*Case A\*\* by confirming no U.S. force posture drawdown despite diplomatic talks. (3) \*\*Disconfirmation:\*\* Does not disconfirm. However, it raises tension with \*\*Case A / H3\*\* (restraint hypothesis), which would predict muted military signaling during back-channel engagement. The fact that CENTCOM publicly emphasizes Hormuz patrols \*after\* Iran's rejection suggests U.S. is maintaining coercive military presence as leverage, consistent with \*\*H1\*\* (escalatory trajectory). \*\*Conclusion:\*\* Signal absorbed into \*\*Case A\*\* as evidence of sustained U.S. military posture. No new case opened. --- ### Signal 3: IRNA (May 10) — Araghchi Statement on "No Preconditions" \*\*[FACT]\*\* Iranian Foreign Minister Abbas Araghchi stated via IRNA on May 10, 2026, that Iran will not accept any peace framework with "preconditions imposed by external powers," directly referencing U.S. ceasefire proposals. \*\*Assessment:\*\* (1) \*\*Actor:\*\* Araghchi — central to \*\*Case A (US-Iran Memo Trajectory)\*\* and \*\*Case E (IRGC/SNSC Constraint on Diplomatic Track)\*\*. (2) \*\*Independence:\*\* Not independent. This is Iran's formal diplomatic response to the U.S. proposal, likely coordinated with SNSC. It directly updates \*\*Case A\*\* by confirming Iran's rejection is now \*official and attributed to the Foreign Ministry\*, not just anonymous SNSC sources. (3) \*\*Disconfirmation:\*\* Partially disconfirms \*\*Case A / H2\*\* (conditional acceptance hypothesis), which posited Iran might accept terms if reframed. Araghchi's language ("no preconditions") suggests Iran views the U.S. proposal as structurally unacceptable, not merely in need of cosmetic rewording. This shifts probability mass toward \*\*H1\*\* (rejection → escalation) and \*\*H4\*\* (stalemate). \*\*Conclusion:\*\* Signal absorbed into \*\*Case A\*\* and \*\*Case E\*\*. Araghchi's statement clarifies that Iran's rejection is \*diplomatic-track official\*, not just IRGC posturing. No new case opened. --- ### Signal 4: NBC News (May 11) — "Iran Responds to U.S. Peace Deal" \*\*[FACT]\*\* NBC News published a video segment titled "Iran responds to U.S. peace deal" on May 11, 2026, summarizing Tehran's rejection of U.S. ceasefire terms. \*\*Assessment:\*\* (1) \*\*Actor:\*\* NBC News as Western media aggregator — relevant to \*\*Case A\*\* for narrative framing. (2) \*\*Independence:\*\* Not independent. This is a media synthesis of Araghchi's IRNA statement and Trump's Truth Social post. It does not add new factual content but confirms the \*public narrative arc\* is now "U.S. proposal → Iran rejection → Trump anger." (3) \*\*Disconfirmation:\*\* No disconfirmation. However, the fact that NBC frames this as "Iran responds to U.S. peace deal" (singular, definitive) suggests Western media perceives this round of diplomacy as \*closed\*, which could influence U.S. domestic political pressure on Trump to escalate. \*\*Conclusion:\*\* Signal absorbed into \*\*Case A\*\* as narrative confirmation. No new case opened. --- ### Signal 5: Tasnim News Agency (May 10) — 40th Day Rallies for Martyred Leader \*\*[FACT]\*\* Iranians held mass rallies on May 10, 2026, to mark the 40th day since the martyrdom of Iran's Leader and

top commanders, according to Tasnim News Agency (IRGC-linked). **\*\*Assessment:\*\*** (1) **\*\*Actor:\*\*** IRGC-linked media and Iranian public — relevant to **\*\*Case E** (IRGC/SNSC Constraint on Diplomatic Track)**\*\*** and **\*\*Case A\*\*** (domestic pressure on Pezeshkian government). (2) **\*\*Independence:\*\*** Partially independent. The 40-day mourning cycle (Arba'een) is a fixed cultural/religious event, but its *\*political instrumentalization\** by the IRGC is a deliberate signal. Tasnim's emphasis on "martyrdom" and "mass rallies" suggests the IRGC is using the mourning period to entrench anti-U.S. sentiment and constrain Pezeshkian's diplomatic flexibility. (3) **\*\*Disconfirmation:\*\*** Does not disconfirm existing hypotheses, but *\*reinforces\** **\*\*Case E / H1\*\*** (IRGC veto over diplomacy). If the IRGC is publicly mobilizing mourning rallies *\*concurrent with Araghchi's rejection of U.S. terms\**, this suggests the hardline faction is using public emotion to lock in a no-compromise posture. **\*\*Conclusion:\*\*** Signal absorbed into **\*\*Case E\*\*** as evidence of IRGC domestic mobilization. This raises the probability that Pezeshkian/Araghchi face severe internal constraints, even if they privately favored conditional engagement. No new case opened. --- ### Signal 6: Mehr News Agency (May 10) — Araghchi-Turkey Phone Call (Second in 48 Hours) **\*\*[FACT]\*\*** Iranian and Turkish Foreign Ministers held a phone call on May 10, 2026, their second within 48 hours, according to Mehr News Agency. **\*\*Assessment:\*\*** (1) **\*\*Actor:\*\*** Araghchi and Turkish FM — new regional diplomacy vector, potentially relevant to **\*\*Case C** (Lebanon-Israel Ceasefire Durability)**\*\*** if Turkey is coordinating Hezbollah messaging, or to **\*\*Case A\*\*** if Turkey is mediating US-Iran communications. (2) **\*\*Independence:\*\*** Highly independent. This is the *\*second\** Araghchi-Turkey call in 48 hours, which is statistically unusual and suggests urgent coordination. Turkey has no formal role in the US-Iran talks or the Lebanon ceasefire, so this could indicate: - **\*\*Hypothesis 1:\*\*** Turkey is serving as a back-channel intermediary between Iran and the U.S. (updating **\*\*Case A\*\***). - **\*\*Hypothesis 2:\*\*** Turkey and Iran are coordinating a response to Israeli strikes in Lebanon or Syria (updating **\*\*Case C\*\***). - **\*\*Hypothesis 3:\*\*** Turkey is offering economic or diplomatic support to Iran in the face of U.S. pressure (new regional realignment angle). (3) **\*\*Disconfirmation:\*\*** Does not disconfirm existing hypotheses, but introduces a *\*new diplomatic actor\** not previously central to any active case. **\*\*Conclusion:\*\*** **\*\*FLAG FOR NEW CASE CONSIDERATION.\*\*** The frequency and timing of Araghchi-Turkey coordination is anomalous. If additional signals emerge showing Turkey playing a mediator or sanctions-evasion role, this could justify

#### H1 SATURATION CHECK — STANDING RULE

# H1 Saturation Check: Incentive Mismatch Hypothesis **\*\*Current deployment pattern:\*\*** H1 appears tertiary or absent in 4 of 5 cases, subordinate to narrative-outcome gaps (H4) and suppressed intersections (H6). This distribution is **\*\*analytically defensible\*\***. [INFERENCE] H1 (incentive mismatch) functions best as background constraint—Trump wants Iran deal but not if it empowers Khamenei's regional posture; Netanyahu wants ceasefire credit but not territorial concession; Pezeshkian wants sanctions relief but cannot override IRGC veto power. These misalignments **\*\*shape the possibility space\*\*** but do not directly drive the observable violations, rhetorical contradictions, or intersection suppressions that H4/H6 capture. [INFERENCE] Where H1 is tertiary (Cases A/D/E), the **\*\*immediate explanatory load\*\*** falls on narrative engineering or structural occlusion—correct prioritization. H1 would become primary only if incentive realignment (e.g., Trump-Khamenei direct channel, verified IRGC stand-down) became the **\*\*dominant observable shift\*\***, which current feeds do not support. **\*\*Calibration audit: PASS.\*\*** H1 correctly subordinated; no saturation risk detected.

#### AI-007 CALIBRATION MAP — EDITION 008 CORRECTIONS

Raw vs calibrated probabilities. Band governance check applied. Any hypothesis above 85% requires named explicit formal evidence.

# Part 1 — Fact Table, Case A: US-Iran Memo Trajectory [FACT] President Trump posted on Truth Social on May 10, 2026, calling Iran's response "TOTALLY UNACCEPTABLE," according to Axios (Tier 1 source). Gate 0.4 confidence: HIGH. This marks the first explicit presidential rejection of Iran's formal reply to the US proposal. [FACT] NBC News reported on May 11, 2026, that Iran had formally responded to a US peace deal proposal (Tier 2 source). Gate 0.4 confidence: HIGH. The content of Iran's response remains undisclosed in US-facing media. [FACT] Tasnim News Agency reported on May 10, 2026, that Iran's response to the US proposal calls for "complete lifting of all sanctions," "unconditional exit" of US forces from the region, and "cessation of support" for Israel (Tier 3 IRGC-linked source). Gate 0.4 confidence: MEDIUM-HIGH given editorial alignment with IRGC positions. [FACT] Iranian Foreign Minister Abbas Araghchi and Saudi Foreign Minister Faisal bin Farhan spoke on May 10, 2026, about "latest developments," according to IRNA (Tier 1 source). Gate 0.4 confidence: HIGH. The call occurred within 24 hours of Trump's Truth Social post. [FACT] Araghchi also conducted a phone call with his Turkish counterpart within 48 hours as of May 10, 2026, per Mehr News Agency (Tier 3 source). Gate 0.4 confidence: MEDIUM-HIGH. This marks the second Araghchi-Turkey call within two days. [FACT] AP reported on May 11, 2026, that Iran and the United States remain "at an impasse" over how to end their war while their conflict continues (Tier 2 source). Gate 0.4 confidence: HIGH. [FACT / INFERENCE hybrid] WANA News Agency reported on May 11, 2026, that an Iraqi crude tanker transited the Strait of Hormuz with Iranian authorization (Tier 3 source). Gate 0.4 confidence: MEDIUM-HIGH. This suggests Iran maintains selective passage control despite CENTCOM blockade operations.

## PART 2 — INCONGRUITY ANALYSIS

# Part 2: Incongruity Analysis — Case A: US-Iran Memo Trajectory [INFERENCE] The 72–87% probability for H-A1 (second round / talks progress) contradicts the structural silence in current feed findings, which contain no named-source reporting of active negotiation sessions, draft text circulation, or bilateral channel traffic between Washington and Tehran in recent days. [FACT / INFERENCE hybrid] Past PMM-003 and PMM-004 outcomes showed that H-A1 collapsed six consecutive times when Iranian-source confidence clusters reached 72–82% without corroborating U.S. or Pakistani intermediary statements; the current feed sweep replicates that imbalance, with hypothesis context referencing Iranian optimism but no corresponding Trump administration signal. [INFERENCE] The 35–50% probability for H-A2 (talks fail / strikes resume) invokes H1 (incentive misalignment): Trump retains maximal leverage by prolonging ambiguity rather than formalizing constraints, while Araghchi and Pezeshkian face domestic pressure from IRGC hardliners if concessions appear unreciprocated. [INFERENCE] H4 (narrative-outcome gap) manifests in the absence of Islamabad-channel updates; if substantive progress were occurring, Pakistani Foreign Ministry or Sharif statements would anchor it, yet none appear in the current feed. [INFERENCE] The 39–54% probability for H-A3 (ceasefire maintained) conflicts with H6 (suppressed intersection): no feed evidence addresses how a formal extension would reconcile Project Freedom's asymmetric enforcement architecture—U.S. freedom of action versus Iranian restraint—without triggering IRGC Command Council defection. [INFERENCE] Disconfirmation threshold proximity: moderate. A Trump-Pezeshkian phone call or signed memo text would collapse H-A2; Iranian withdrawal or Trump's Pakistan-channel cancellation would collapse H-A1. Neither has occurred. \*\*Dominant heuristic: H4 (narrative vs outcome gap). H1 (incentive). H6 (suppressed intersection).\*\*

[INFERENCE] Case A source base demonstrates strong Tier 1 representation (5 sources) providing strategic-level signals, complemented by robust Tier 2 depth (7 sources). Source diversity appears adequate across diplomatic, intelligence, and regional channels. [INFERENCE] Cluster risk exists if multiple sources derive from single diplomatic track or coordinated messaging campaigns. [FACT / INFERENCE hybrid] Gate 0.2 compliance depends on whether sources independently corroborate memo existence versus echoing secondary reporting. Overall assessment: MEDIUM confidence in source base.

### PART 3 — HYPOTHESIS SET

| H-A1: Second round / talks progress<br>72-87% (pt: 0.80)                                                              | H-A2: Talks fail / strikes resume<br>35-50% (pt: 0.40)                                                                | H-A3: Ceasefire extended / maintained<br>39-54% (pt: 0.13)                                                                                                             |

# Part 3 — Hypothesis Set: Iran-US Ceasefire Status (Case A) \*\*H-A1: Second round / talks progress (72–87%, point estimate 80%)\*\* [FACT] Trump stated on May 6, 2026, that the US has had "very good talks" with Iran and that "it's very possible" a deal could be struck, per Al Jazeera and CBS reporting. [FACT] Iran's government confirmed via IRNA on May 6 that it is reviewing the latest US peace proposal. [INFERENCE] This mutual public engagement supports the upper probability band. [FACT / INFERENCE hybrid] Trump's May 6 pause of "Project Freedom" (the Hormuz convoy escort effort), announced with Secretary Rubio, signals de-escalatory intent but stops short of formal ceasefire extension. [INFERENCE] Disconfirmation triggers: Trump labeling talks "dead" or Iran rejecting the US proposal outright within 72 hours; resumption of Project Freedom; Iranian missile strikes on US Navy vessels in theater. --- \*\*H-A2: Talks fail / ceasefire lapses / strikes resume (35–50%, point estimate 40%)\*\* [FACT] Despite Trump's optimistic tone on May 6, no formal agreement or ceasefire extension has been announced. [FACT] Iran launched cruise missiles, drones, and weaponized small boats against US vessels in recent days, per carry-forward reporting. [INFERENCE] This tactical pressure campaign, though not escalating to direct hits, constrains the probability ceiling for imminent breakdown. [INFERENCE] Israel conducted its first Beirut airstrike since the ceasefire on May 6, targeting a Hezbollah commander, which suggests fragility in the broader regional pause. [INFERENCE] Disconfirmation triggers: signing of a formal bilateral text within 48 hours; Iranian withdrawal of naval assets from Hormuz choke points; Trump announcing "deal done." --- \*\*H-A3: Ceasefire formally extended / maintained (39–54%, point estimate 13%)\*\* [INFERENCE] The point estimate of 13% reflects the absence of any formal extension announcement as of May 6, despite the optimistic rhetoric. [FACT] Trump's public statements on May 6 emphasized possibility, not completion; Iran's review posture per IRNA is deliberative, not confirmatory. [INFERENCE] The range (39–54%) reflects structural variance: Trump's pause of Project Freedom creates space for extension, but no text has been signed. [FACT / INFERENCE hybrid] Israel's May 6 Beirut strike—its first since the ceasefire—signals that neither Israel nor Hezbollah consider the pause durable enough to constrain independent operations. [INFERENCE] Disconfirmation triggers: Trump or Rubio announcing a 30-day ceasefire extension; Iranian Foreign Ministry statement confirming formal rollover; US Navy resuming Hormuz patrols without incident.

### PART 4 — TRUTH QUALITY CHECK (TQL) — AI-006 MANDATORY

## Part 4 — Truth Quality Check (TQL) ### Item 1: Key Assumption [INFERENCE] The 72–87% confidence in second-round talks assumes Trump views Iran diplomacy as a personal legacy project and will sustain negotiation momentum through May–June 2026. If Trump pivots to distract from domestic crises or declares Iran "non-negotiable," this architecture collapses and the 35–50% strike resumption probability becomes baseline reality within 10 days. ### Item 2: Fragile Fact [FACT / INFERENCE hybrid] The current ceasefire depends on Iran maintaining Hezbollah restraint and Israel not striking Iranian assets in Syria or Lebanon. One Hezbollah rocket from Kfar Giladi or one Israeli sortie on Quds Force logistics in Damascus severs the pause. No durable enforcement mechanism exists; compliance is voluntary and reversible within 72 hours of any violation. ### Item 3: High-Impact Uncertainty [INFERENCE] Netanyahu's calculus on tolerating talks versus pre-empting Iranian nuclear progress remains opaque. If Israeli intelligence assesses Iran within 45 days of breakout—or if domestic coalition pressure forces Netanyahu to act before Knesset summer recess—the 39–54% ceasefire extension collapses to near-zero, triggering the 35–50% strike resumption scenario regardless of Trump's diplomatic intent. ### Item 4: Tier 4 Dependency Test [INFERENCE] The entire probability range hinges on China maintaining economic leverage over Iran and Trump not imposing sanctions that undercut Beijing's oil purchases. If Trump declares maximum pressure 2.0 or China reduces Iranian crude imports by 30%+, Khamenei's negotiation tolerance expires. This single variable—Beijing's May–June crude offtake—controls whether talks progress (72–87%) or Iran exits diplomacy (35–50% strike risk).

### PART 5 — DISCONFIRMATION

**CONFIRMS****CONTRADICTS**

|                                                                                    |                                                                         |
|------------------------------------------------------------------------------------|-------------------------------------------------------------------------|
| ■ Memo signed with substantive concessions from both sides                         | ■ Trump cancels Pakistan channel OR resumes Project Freedom kinetically |
| ■ Iranian withdrawal from negotiations OR draft language shows irreconcilable posi | ■ Direct Trump-Pezeshkian phone call                                    |

[INFERENCE] The Iranian withdrawal threshold poses the gravest near-term disconfirmation risk for Case A. If Tehran walks away from Islamabad talks—signaled by Araghchi canceling travel or Khamenei issuing public rejection—H-A1 collapses to 10-20% and H-A3 climbs to 50-65%, a catastrophic shift. [FACT / INFERENCE hybrid] Given Khamenei's May 2026 statements demanding full sanctions relief and Trump's refusal to lift JCPOA-era measures, irreconcilable draft language is plausible. [INFERENCE] Conversely, a Trump-Pezeshkian phone call—unprecedented but possible if Sharif brokers it—would raise H-A1 to 50-65%, the largest single positive trigger. The memo-signing threshold remains aspirational; no current feed evidence suggests imminent concessions from Netanyahu or Salami. Pakistan's continued engagement is the only buffer against immediate disconfirmation.

# Part 1 — Fact Table: Iran Nuclear Stockpile Disposition [FACT / INFERENCE hybrid] President Trump posted on Truth Social on May 10, 2026, calling Iran's response "TOTALLY UNACCEPTABLE," according to Axios (Tier 1 White House official statements). Gate 0.4 confidence: HIGH. This statement directly addresses Iran's counter-proposal to U.S. terms, indicating continued diplomatic impasse as of May 10. [FACT] U.S. Central Command stated on Sunday, May 10, 2026, that it has redirected 61 commercial vessels in the blockade, according to CENTCOM public affairs (Tier 1). Gate 0.4 confidence: HIGH. This confirms active maritime interdiction operations in the Strait of Hormuz region, consistent with enforcement of sanctions or blockade protocols targeting Iranian hydrocarbon exports. [FACT / INFERENCE hybrid] Iranian Foreign Minister Abbas Araghchi and Saudi Foreign Minister Faisal bin Farhan spoke about the "latest developments" according to IRNA (Tier 1 SNSC/IRNA named attribution). Gate 0.4 confidence: MEDIUM-HIGH. The contact occurred within 48 hours of May 11, 2026, suggesting active Gulf diplomatic coordination on de-escalation or containment architecture. [FACT / INFERENCE hybrid] The Associated Press reported on May 10-11, 2026, that "Iran and the United States were at an impasse Monday over how to end their war" (Tier 2). Gate 0.4 confidence: HIGH. This corroborates Trump's May 10 rejection and indicates no breakthrough in ceasefire or denuclearization negotiations as of May 11. [FACT / INFERENCE hybrid] Iranian and Turkish foreign ministers held a phone call "again within 48 hours," according to Mehr News Agency on May 10, 2026 (Tier 3). Gate 0.4 confidence: MEDIUM. This suggests intensified Turkish mediation efforts or coordination on regional security arrangements, potentially related to Iran's diplomatic positioning on nuclear or sanctions relief terms. [FACT / INFERENCE hybrid] An Iraqi crude tanker transited the Strait of Hormuz with Iranian authorization, according to WANA News Agency on May 11, 2026 (Tier 3). Gate 0.4 confidence: MEDIUM. This indicates selective Iranian enforcement of transit restrictions, consistent with leverage maintenance over Gulf energy flows while permitting allied or neutral state shipments.

## PART 2 — INCONGRUITY ANALYSIS

# Part 2 — Incongruity Analysis \*\*Case B: Iran Nuclear Stockpile Disposition\*\* [INFERENCE] The 85% confidence in Hormuz sustainability (H-B1) rests on an assumption that Iran's leadership perceives transit security as serving regime survival interests—yet \*\*H6 (suppressed intersection)\*\* raises the question of why a blockade-capable adversary would volunteer custodial cooperation on uranium while facing kinetic pressure elsewhere. [FACT / INFERENCE hybrid] The IAEA has not confirmed uranium transfer to third-country custody as of War Day 60+, and the Atomic Energy Organization of Iran has issued no public statement accepting export terms, triggering proximity to two disconfirmation thresholds simultaneously. [INFERENCE] \*\*H4 (narrative-outcome gap)\*\* emerges as secondary: Trump administration officials have characterized the Islamabad memo as a framework breakthrough, but the absence of named custodian (Russia, China, or other) in publicly available reporting suggests either diplomatic caution or substantive non-agreement on core provisions. If the memo exists but uranium provision is deferred indefinitely—a third disconfirmation threshold—then the narrative of "Iran steps back" diverges sharply from operational reality. [INFERENCE] \*\*H1 (incentive asymmetry)\*\* operates tertiary: Iran's incentive to secure Hormuz transit and avoid IRGC escalation (H-B2 at 9–24%) depends on regime confidence that uranium disposition yields sanctions relief or security guarantees. [FACT / INFERENCE hybrid] No such guarantees have been reported in current feed findings. \*\*PMM-003 and PMM-004 caution against over-reliance on Iranian-source optimism when Tier 1 denial or silence persists\*\*—here, silence on custodianship and export mechanics replicates that pattern. [INFERENCE] The 70–85% multilateral mission confidence (H-B3) may reflect coalition declaratory intent rather than Iranian compliance. \*\*Dominant heuristic: H6 (suppressed intersection —

blockade/Hormuz capability vs. cooperative uranium export). H4 (narrative gap). H1 (incentive asymmetry).\*\*

**[INFERENCE] Case B nuclear stockpile disposition draws on 18 sources with modest Tier 1 depth (5) and reasonable geographic spread across IAEA, Persian-language outlets, and Western intelligence reporting. [INFERENCE] Tier 2 dominance (7) introduces moderate dependency on secondary interpretation rather than primary IAEA documents or direct Iranian government statements. [INFERENCE] Cluster risk exists around uranium enrichment narratives potentially repeating Western agency framings without independent Iranian technical confirmation. [INFERENCE] Gate 0.2 compliance appears adequate for material facts but weaker on operational intent behind stockpile movements. Overall assessment: MEDIUM confidence in source base.**

### PART 3 — HYPOTHESIS SET

| H-B1: Hormuz open / recoverable<br>85-85% (pt: 0.85)                                                                                                             | H-B2: IRGC kinetic vs USN/GCC<br>9-24% (pt: 0.15)                                                                                                                | H-B3: Multilateral force committed<br>70-85% (pt: 0.80)                                                                                                          |

Net -0.150 | Bayesian: Tier 1: Trump's rejection of Iran's prop. Prop: H-A1 $\Delta=-0.109 \rightarrow$ H-A3 -0.030; H-A3 $\Delta=+0.144 \rightarrow$ H-E3 +0.040. Net -0.076 | Bayesian: Tier 3: Tasnim reports Iran's response c. Prop: H-A1 $\Delta=-0.109 \rightarrow$ H-A3 -0.030; H-A3 $\Delta=+0.144 \rightarrow$ H-E3 +0.040. Net +0.045 |

# Part 3 — Hypothesis Set for Case B: Hormuz Freedom of Navigation ## H-B1: "Hormuz conditionally open / sustainability recoverable" — 85% [FACT / INFERENCE hybrid] Trump paused "Project Freedom" on May 6, 2026, halting the U.S.-led commercial escort initiative through Hormuz (CBS/Al Jazeera). [FACT] Trump stated May 6 that the U.S. has had "very good talks" with Iran over the past 24 hours (Al Jazeera). [FACT / INFERENCE hybrid] Iran is reviewing the latest U.S. peace proposal, signaling diplomatic engagement that reduces immediate closure risk (CBS). [INFERENCE] The combination of active dialogue and the pause in unilateral convoy operations suggests both sides are avoiding actions that would force full closure. \*\*Disconfirmation trigger:\*\* IRGC missile strikes on commercial vessels transiting Hormuz, or Iranian declaration of exclusion zone enforcement against non-compliant traffic. --- ## H-B2: "IRGC kinetic escalation against USN or GCC assets" — 9–24% (point estimate 15%) [FACT / INFERENCE hybrid] Trump explicitly rejected Iran's recent proposal, creating diplomatic tension despite ongoing talks (Tier 1 feed). [FACT / INFERENCE hybrid] Iranian state media (Tasnim) claims IRGC forces fired missiles at a U.S. Navy warship in recent days, though U.S. confirmation is absent (carry-forward). [INFERENCE] The wide probability range reflects uncertainty: low-end (9%) assumes Tasnim reports are exaggerated and talks proceed; high-end (24%) accounts for Trump's rejection triggering IRGC hardliner pressure for asymmetric retaliation. [INFERENCE] Current dialogue between Trump and Tehran suppresses immediate escalation probability. \*\*Disconfirmation trigger:\*\* Confirmed USN engagement with IRGC fast boats or anti-ship cruise missiles; GCC port infrastructure attacked; or Khamenei speech authorizing "deterrent strikes." --- ## H-B3: "Multilateral mission committed force structure" — 70–85% (point estimate 80%) [FACT / INFERENCE hybrid] Trump paused the unilateral "Project Freedom" escort mission on May 6, 2026, opening space for coalition diplomacy (CBS). [FACT / INFERENCE hybrid] Secretary of State Marco Rubio's involvement in the pause decision suggests administration preference for burden-sharing with European and GCC partners rather than solo U.S. operations. [INFERENCE] The 70–85% range reflects high confidence that pausing unilateral action will compel multilateral structure, but uncertainty remains over whether European navies (France, UK) will commit destroyers or only liaison officers. [INFERENCE] Iran's active review of U.S. proposals reduces the urgency driving coalition formation, lowering the top-end estimate from prior levels. \*\*Disconfirmation trigger:\*\* Trump resumes unilateral escort missions within 72 hours; or GCC states (Saudi Arabia, UAE) publicly decline participation in any coalition framework.

### PART 4 — TRUTH QUALITY CHECK (TQL) — AI-006 MANDATORY

## Part 4 — Truth Quality Check (TQL) \*\*Item 1: Key Assumption\*\* [INFERENCE] The 85% Hormuz sustainability probability assumes Iran maintains strategic restraint despite domestic hardliner pressure. This rests on Khamenei's calculus that economic survival outweighs military retaliation, and that IRGC naval forces (Admiral Salami's command) will comply with de-escalation orders despite tactical provocations near the Strait through May 2026. \*\*Item 2: Fragile Fact\*\* [FACT / INFERENCE hybrid] Current maritime safety estimates depend on unverified Pakistani assurances of convoy participation and Chinese naval logistics commitment near Yanbu. If Islamabad or Beijing withdraw escort vessels citing domestic constraints, the 80% multilateral mission probability collapses, leaving Hormuz transit vulnerable to asymmetric IRGC speedboat or mine deployment. \*\*Item 3: High-Impact Uncertainty\*\* [INFERENCE] The 9-24% IRGC kinetic escalation range hinges entirely on Trump administration redlines remaining ambiguous. If Washington declares explicit military thresholds for retaliation—or if an accidental USN-IRGC engagement occurs near Kfar Giladi's offshore parallels—hardliner factions under Ghalibaf could override Pezeshkian's diplomatic track, spiking escalation probability above 40% within days. \*\*Item 4: Tier 4 Dependency Test\*\* [INFERENCE] All three hypotheses assume Netanyahu does not authorize unilateral strikes on Iranian enrichment facilities during May 2026. If Israeli F-35 sorties target Natanz or Fordow citing existential threat doctrine, IRGC closure of Hormuz becomes near-certain (>90%), invalidating sustainability and multilateral mission estimates regardless of Khamenei's prior

restraint calculations.

#### PART 5 — DISCONFIRMATION

| CONFIRMS                                                            | CONTRADICTS                                                  |
|---------------------------------------------------------------------|--------------------------------------------------------------|
| ■ IAEA confirms uranium transfer to third-country custody           | ■ Atomic Energy Organization of Iran publicly rejects export |
| ■ Memo signed but uranium provision absent or deferred indefinitely | ■ Russia or China named as third-party custodian             |

[INFERENCE] The most impactful threshold—IAEA confirmation of uranium transfer to third-party custody—remains distant; no agency statement or Vienna cable in current feeds suggests imminent inventory movement. [FACT / INFERENCE hybrid] The likeliest near-term trigger is **\*\*memo signature without uranium provision\*\***, given Trump's pattern of declaring diplomatic wins before implementation details solidify. [INFERENCE] If Araghchi or AEIOI spokesman Behrouz Kamalvandi publicly reject any enriched-material export within 72 hours of a Mar-a-Lago announcement, H-B1 collapses to single digits and H-B3 (sanctions relief only) becomes dominant. [INFERENCE] Conversely, a Kremlin or Beijing statement accepting custodianship would vault H-B1 above 35%, but neither capital has signalled willingness to warehouse Iranian LEU amid their own strategic calculations.

#### PART 6 — FORWARD FLAG

##### FLAG 008 · PRED-01-B

Iranian uranium stockpile shipped out of country

*Gate note: Window: Before 5 Jun 2026 | Status: OPENED Ed01*

##### FLAG 008 · PRED-01-C

Lebanon ceasefire holds through 14 May extension

*Gate note: Window: Before 14 May 2026 | Status: OPENED Ed01*

**\*\*Edition 008 Forward Monitoring — Case B\*\*** [INFERENCE] Priority one: track 14 May Lebanon ceasefire deadline and any Hezbollah/IDF incidents in southern Lebanon border villages. [INFERENCE] Priority two: watch for IRGC or SNSC public statements through early June that signal factional acceptance of Araghchi's diplomatic line. [FACT / INFERENCE hybrid] Trump-Xi summit window (before 16 May) requires monitoring for any Iran-framework language in joint communiqués or readouts. [INFERENCE] Uranium shipment (before 5 June) remains opaque; monitor IAEA Board of Governors statements and any Kazakh or Russian diplomatic traffic. [INFERENCE] Focus actors: Khamenei office, Salami, Ghalibaf, Netanyahu, and any Hezbollah field commanders near Kfar Giladi or Metula checkpoints.

# Part 1 — Fact Table: Lebanon-Israel Ceasefire Durability ## Recent Ceasefire-Adjacent Developments (May 10–11, 2026) [INFERENCE] Former Israeli Prime Minister Ehud Olmert stated on May 11, 2026, that "Hezbollah is the enemy of Lebanon and must be disarmed," according to Al Jazeera (Tier 2). Gate 0.4 confidence: HIGH. This represents continued Israeli rhetorical pressure on Lebanese state actors regarding Hezbollah's military infrastructure, despite the ceasefire framework established in late 2024. [INFERENCE] Israel conducted its first airstrike in Beirut since the ceasefire on May 6, 2026, according to carry-forward reporting from IDF operations logs. Gate 0.4 confidence: HIGH. The strike targeted southern Beirut suburbs, traditionally Hezbollah-controlled areas. This marks a technical breach of the November 2024 ceasefire agreement, which established mutual cessation of hostilities. [FACT] President Trump posted on Truth Social on May 10, 2026, calling Iran's response to a U.S. peace proposal "TOTALLY UNACCEPTABLE," according to Axios (Tier 1). Gate 0.4 confidence: HIGH. Trump's statement focuses on Iran's broader negotiating posture in the Gulf crisis, not Lebanon specifically, but reflects the regional diplomatic climate affecting ceasefire durability. [FACT / INFERENCE hybrid] Iranian Foreign Minister Abbas Araghchi held phone consultations with his Saudi counterpart Faisal bin Farhan regarding "latest developments," according to IRNA (Tier 1) on May 10, 2026. Gate 0.4 confidence: MEDIUM-HIGH. While the readout does not specify Lebanon, Saudi-Iranian coordination historically influences Hezbollah's operational calculus through Tehran's command channels. [INFERENCE] No direct violations or clashes between IDF and Hezbollah forces along the Blue Line are reported in current feed findings for May 10–11, 2026. The May 6 Beirut strike remains the most recent documented kinetic incident affecting ceasefire integrity, suggesting tactical restraint despite political tensions.

## PART 2 — INCONGRUITY ANALYSIS

# Part 2 — Incongruity Analysis: Case C (Lebanon-Israel Ceasefire Durability) [INFERENCE] The dominant incongruity is \*\*H4 (narrative vs outcome gap)\*\*: the ceasefire framework occupies diplomatic discourse while operational tempo on both sides remains unchanged. [FACT / INFERENCE hybrid] IDF strikes continue in southern Lebanon; Hezbollah maintains presence south of Litani despite UNIFIL monitoring provisions nominally in effect since early March 2026. [INFERENCE] No disconfirmation threshold has triggered — the ceasefire has not been formally extended beyond mid-May, the IDF has not launched a major cross-Litani ground operation, and Lebanese officials have not withdrawn from talks. [INFERENCE] \*\*H6 (suppressed intersection)\*\* applies secondarily: the ceasefire narrative suppresses the Iran-Hezbollah resupply question. [INFERENCE] If Iranian materiel continues flowing through Damascus or via Beirut port, framework viability declines regardless of Lebanese government posture. [INFERENCE] The intersection of Syrian transit security, IRGC logistics, and UNIFIL inspection capacity is analytically under-weighted in public discourse. [INFERENCE] \*\*H2 (timing asymmetry)\*\* is tertiary: Israel faces no electoral deadline in May 2026; Hezbollah's reconstruction dependency on Iranian funds creates asymmetric patience. [INFERENCE] Netanyahu's coalition has no domestic incentive to formalize a durable pause if tactical advantage persists. [INFERENCE] \*\*PMM-001 and PMM-003 lessons apply directly\*\*: reliance on named-source ceasefire optimism (Lebanese or French officials) without testing bilateral incentive misalignment risks overconfidence. [INFERENCE] H-C2 (framework without operational impact) at 57-63% reflects residual uncertainty about whether violations will remain tolerable or escalate to threshold-crossing events. \*\*Dominant heuristic: H4 (narrative vs outcome gap). H6 (suppressed intersection). H2 (timing asymmetry).\*\*

[FACT / INFERENCE hybrid] Case C draws on 18 sources spanning Tier 1 (Reuters, AP, BBC, Haaretz, Al Jazeera), Tier 2 (Times of Israel, Daily Star, Jerusalem Post), and Tier 3 regional outlets, providing geographic and editorial diversity across Israeli, Lebanese, Western, and Arab perspectives. [INFERENCE] Independence is strong; no single outlet dominates the feed, reducing cluster risk. [INFERENCE] Gate 0.2 compliance appears robust given named attribution to IDF, Hezbollah, UNIFIL, and Lebanese government sources in current May 2026 reporting. [INFERENCE] Minimal echo-chamber effect detected. Overall assessment: HIGH confidence in source base.

### PART 3 — HYPOTHESIS SET

| H-C1: Ceasefire → operational pause<br>0-13% (pt: 0.01)                                                                                                                  | H-C2: Framework without impact<br>57-63% (pt: 0.60)                                                   | H-C3: Hezbollah escalation / collapse<br>41-56% (pt: 0.50)                                            |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------|
| Bayesian: Tier 2: No reports of major IDF operatio. Prop: H-A1 $\Delta=-0.109 \rightarrow$ H-A3 $-0.030$ ; H-A3 $\Delta=+0.144 \rightarrow$ H-E3 $+0.040$ . Net $+0.001$ | Prop: H-A1 $\Delta=-0.109 \rightarrow$ H-A3 $-0.030$ ; H-A3 $\Delta=+0.144 \rightarrow$ H-E3 $+0.040$ | Prop: H-A1 $\Delta=-0.109 \rightarrow$ H-A3 $-0.030$ ; H-A3 $\Delta=+0.144 \rightarrow$ H-E3 $+0.040$ |

# Part 3 — Hypothesis Set: \*\*Case C (Lebanon Ceasefire / IDF-Hezbollah Posture)\*\* \*\*H-C1: "Lebanon ceasefire framework leads to operational pause"\*\*\* — 0–13% (pt=0.01) [FACT] Israel conducted its first airstrike in Beirut since the ceasefire on May 6, 2026, targeting a Hezbollah commander, per IDF reports. [FACT / INFERENCE hybrid] This direct kinetic action contradicts any operational pause, anchoring probability near zero. [INFERENCE] The hypothesis would gain traction only if Israel publicly commits to frozen northern operations and no strikes occur for 14+ consecutive days. [FACT / INFERENCE hybrid] Current IDF behavior shows no such pause. Disconfirmation trigger: sustained IDF raid tempo in South Lebanon or Beirut suburbs through mid-May. --- \*\*H-C2: "Framework without operational impact / IDF expansion"\*\*\* — 57–63% (pt=0.60) [FACT / INFERENCE hybrid] The May 6 Beirut airstrike, the first since the ceasefire, signals resumed IDF targeting freedom despite any diplomatic framework. [INFERENCE] This pattern—talks coexisting with kinetic action—fits the hypothesis closely. [INFERENCE] Suppressing factors include potential US pressure if Trump's Iran talks produce a broader regional deal that constrains Israeli freedom of action. [FACT] Trump stated May 6 that US-Iran talks are "very good" but provided no Lebanon-specific constraints. Disconfirmation trigger: public Trump demand for IDF northern stand-down or Hezbollah massing forces visibly for large-scale rocket salvos. --- \*\*H-C3: "Hezbollah escalation / framework collapse"\*\*\* — 41–56% (pt=0.50) [FACT / INFERENCE hybrid] The May 6 IDF airstrike in Beirut killed a Hezbollah commander, a high-value target likely to provoke retaliation. [INFERENCE] Hezbollah's response calculus hinges on whether Iran's ongoing talks with Trump (per May 6 statements) impose restraint or whether the group acts independently. [INFERENCE] Probability suppressed by absence of reported Hezbollah rocket salvos or ground incursions in the 48 hours following the strike. [FACT / INFERENCE hybrid] No Al Jazeera or other feeds report Hezbollah counterfire as of May 6. Disconfirmation trigger: Hezbollah rocket barrage exceeding 100 projectiles within 72 hours, or public IRGC instruction to Hezbollah to stand down.

### PART 4 — TRUTH QUALITY CHECK (TQL) — AI-006 MANDATORY

# Part 4 — Truth Quality Check (TQL) \*\*Item 1: Key Assumption\*\* [INFERENCE] The durability assessment assumes Netanyahu retains political capacity to enforce restraint on IDF operations and settler incursions into southern Lebanon despite coalition pressure from Ben-Gvir and Smotrich. If domestic pressures compel expansion or if Hezbollah interprets restraint as weakness, the framework collapses rapidly regardless of diplomatic posture. \*\*Item 2: Fragile Fact\*\* [FACT / INFERENCE hybrid] Current feed evidence shows IDF ground operations ongoing in southern Lebanon (multiple artillery strikes, Kfar Giladi shelling), but no named ceasefire agreement exists in May 2026 sources. The term "Lebanon ceasefire framework" may reference stale hypothetical constructs; if no framework was finalized, all durability probabilities rest on phantom architecture. \*\*Item 3: High-Impact Uncertainty\*\* [INFERENCE] Hezbollah's tolerance threshold for IDF presence south of the Litani remains undefined. If Nasrallah's successors adopt a zero-tolerance posture toward Israeli incursions—signaling through precision strikes or drone operations—escalation probability (H-C3: 41-56%) could shift abruptly upward. No current feed evidence clarifies post-Nasrallah command consensus on escalation doctrine. \*\*Item 4: Tier 4 Dependency Test\*\* [INFERENCE] Ceasefire durability depends heavily on Iranian strategic restraint. If Tehran instructs Hezbollah to maintain fire discipline to preserve Axis deterrence architecture during nuclear threshold maneuvers, operational pause becomes feasible. Conversely, if Iran prioritizes Lebanon front activation to dilute Israeli focus, framework collapse accelerates. No May 2026 feed evidence reveals current Iranian guidance to Hezbollah.

### PART 5 — DISCONFIRMATION

| CONFIRMS                                                                  | CONTRADICTS                                                               |
|---------------------------------------------------------------------------|---------------------------------------------------------------------------|
| ■ Ceasefire extended formally beyond 14 May with Hezbollah quiet response | ■ IDF crosses Litani in major operation OR Hezbollah barrage 100+ rockets |

■ Lebanese government publicly withdraws from talks OR Aoun resigns

■ UNIFIL withdrawal completed

[INFERENCE] The IDF Litani threshold sits closest to trigger. Israeli ground forces remain staged near the Blue Line, and Defense Minister statements reference "freedom of action" south of the river. A scaled incursion—battalion-strength or larger—would breach Gate 0.6, contradict PRED-01-C, and confirm H-C3 (limited tactical extension). [FACT / INFERENCE hybrid] Hezbollah rocket inventories remain intact per open-source counts; a 100+ salvo is operationally feasible if political restraint lifts. [INFERENCE] The largest \*strategic\* impact would follow Lebanese government withdrawal or an Aoun resignation: either event collapses domestic legitimacy for ceasefire talks, shifts H-C1 to 5-15%, and removes any diplomatic brake on escalation. UNIFIL's partial drawdown continues but has not reached full withdrawal; completion would eliminate third-party monitoring and sharply elevate H-C2 risk.

PART 6 — FORWARD FLAG

FLAG 008 · PRED-01-B

Iranian uranium stockpile shipped out of country

Gate note: Window: Before 5 Jun 2026 | Status: OPENED Ed01

FLAG 008 · PRED-01-C

Lebanon ceasefire holds through 14 May extension

Gate note: Window: Before 14 May 2026 | Status: OPENED Ed01

**\*\*Case C Monitoring Note – Edition 008\*\*** [INFERENCE] With PRED-01-C's 14 May Lebanon ceasefire extension deadline now passed, Edition 009 must verify compliance via UNIFIL sitreps, IDF Northern Command statements, and Hezbollah media channels. [INFERENCE] PRED-01-D's 16 May Beijing summit window closes imminently—monitor Xinhua, White House readouts, and Iranian MFA (Araghchi) responses for any Iran-framework language. [FACT / INFERENCE hybrid] PRED-01-B and PRED-01-E share a 5 June horizon: track IAEA Vienna Board sessions for uranium shipment signals and Tehran dailies (Kayhan, IRNA) for SNSC/IRGC commentary on Araghchi's negotiating stance. [INFERENCE] Prioritise: Araghchi travel schedule, Trump-Xi communiqués, and any Khamenei Office statements on diplomatic redlines.

| Iranians held mass rallies on May 10, 2026, to mark the 40th day since the martyrdom of Iran's Leader and top commanders, according to Tasnim News Age | Tasnim News Agency (IRGC-linked)   Tier 3                     |

# Part 1 — Fact Table: Trump-Xi Beijing Summit (Iran Framing) [FACT] President Trump posted on Truth Social on May 10, 2026, calling Iran's response "TOTALLY UNACCEPTABLE," according to Axios (Tier 1, Gate 0.4 confidence: HIGH). This marks Trump's first public characterization of Iran's formal reply to the U.S. peace proposal floated earlier in the week. [FACT] U.S. Central Command stated on May 10, 2026, that it has redirected 61 commercial vessels during the ongoing Strait of Hormuz blockade (Tier 1, Gate 0.4 confidence: HIGH). This operational detail confirms sustained Iranian maritime control in the Strait, now entering its third month. [FACT] Iranian Foreign Minister Abbas Araghchi held phone consultations with Saudi Foreign Minister Faisal bin Farhan regarding "the latest developments," according to IRNA reporting from May 10-11, 2026 (Tier 1, Gate 0.4 confidence: HIGH). The call represents continued Iranian diplomatic outreach to Gulf Arab states amid the U.S. standoff. [FACT] AP reported on May 10, 2026, that Iran and the United States "were at an impasse Monday over how to end their war" (Tier 2, Gate 0.4 confidence: MEDIUM-HIGH). This characterization aligns with Trump's public dismissal of Iran's counterproposal. [FACT / INFERENCE hybrid] Araghchi also held a second phone call with Turkish Foreign Minister Hakan Fidan within 48 hours, according to Mehr News Agency on May 10, 2026 (Tier 3, Gate 0.4 confidence: MEDIUM-HIGH). The repeated Turkish contact suggests coordination on diplomatic positioning ahead of potential regional mediation efforts. [FACT / INFERENCE hybrid] WANA News Agency reported on May 11, 2026, that an Iraqi crude tanker transited the Strait of Hormuz "with Iranian authorization" (Tier 3, Gate 0.4 confidence: MEDIUM). This detail indicates Iran continues to selectively permit allied or neutral state oil shipments while blocking Western-bound traffic. [FACT / INFERENCE hybrid] Tasnim News Agency reported mass rallies on May 10, 2026, marking the 40th day since the martyrdom of Iran's Leader and top commanders (Tier 3, Gate 0.4 confidence: MEDIUM-HIGH). The 40-day commemoration (Arba'een) holds ritual significance in Shia tradition and likely reinforces domestic mobilization narratives.

## PART 2 — INCONGRUITY ANALYSIS

# Part 2 — Incongruity Analysis ## Case D: Trump-Xi Beijing Summit (Iran Framing) [FACT / INFERENCE hybrid] The 13-16 May Trump-Xi summit in Beijing has generated minimal public commentary on Iran from either delegation, despite the concurrent U.S.-Iran negotiation window and China's role as Tehran's largest oil customer. [INFERENCE] This silence represents a suppressed intersection (H6): the summit agenda likely addresses Iran indirectly through trade architecture and sanctions relief pathways, but neither side has framed the meeting in those terms, creating narrative-outcome divergence (H4). [INFERENCE] H3 (beneficiary asymmetry) emerges as primary: Beijing benefits from a U.S.-Iran framework that lifts secondary sanctions on Chinese energy imports, while Trump's delegation gains leverage to present the summit as part of a broader regional stabilization narrative. Neither side publicly acknowledges this symmetry, yet both have structural incentives (H1) to avoid explicit endorsement—China to preserve strategic ambiguity with Tehran, Trump to avoid appearing dependent on Chinese mediation. [INFERENCE] The disconfirmation threshold cluster has not triggered: no joint statement on Iran has emerged, no Chinese UNSC veto signal has been issued, and the summit remains on schedule. However, the **\*\*absence of a Beijing economic guarantee\*\*** for Iran post-memo—a mechanism China has used in prior sanctions-relief transitions—suggests Beijing is waiting for clearer U.S. commitment signals before underwriting Iranian compliance. [INFERENCE] PMM-001 applies: avoid named-source predictions without bilateral incentive mapping. The current feed sweep offers no direct Xi-Trump Iran attribution, only structural silence. H-D2 (GL U lapsed, 72-89%) reflects this: no renewal evidence, but also no explicit wind-down instrument, leaving the framework in procedural limbo. **\*\*Dominant heuristic: H3 (beneficiary asymmetry). H6 (suppressed intersection). H1 (incentive alignment).\*\***

**\*\*Case D Domain Quality Assessment\*\*** [INFERENCE] Source distribution is adequate with five Tier 1 anchors, though seven Tier 2 outlets introduce moderate correlation risk if regionally clustered. [FACT / INFERENCE hybrid] Eighteen total sources provide reasonable triangulation for Beijing summit Iran-framing angles, assuming editorial

independence across tiers. [INFERENCE] Gate 0.2 compliance likely satisfied if Tier 1 sources carry direct Trump-Xi statements or MFA readouts; Tier 3 sources risk speculative Iran linkage without corroboration. Cluster risk moderate without geographic/outlet breakdown. **\*\*Overall assessment: MEDIUM confidence in source base.\*\***

### PART 3 — HYPOTHESIS SET

| H-D1: GL U renewed<br>10-22% (pt: 0.12)                                                          | H-D2: GL U lapsed (confirmed)<br>72-89% (pt: 0.83)                                                                                                               | H-D3: Wind-down instrument issued<br>20-35% (pt: 0.32)                                           |
|--------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------|
| Prop: H-A1 $\Delta=-0.109 \rightarrow$ H-A3 -0.030; H-A3 $\Delta=+0.144 \rightarrow$ H-E3 +0.040 | Bayesian: Tier 2: Trump heading to China per NBC u. Prop: H-A1 $\Delta=-0.109 \rightarrow$ H-A3 -0.030; H-A3 $\Delta=+0.144 \rightarrow$ H-E3 +0.040. Net +0.052 | Prop: H-A1 $\Delta=-0.109 \rightarrow$ H-A3 -0.030; H-A3 $\Delta=+0.144 \rightarrow$ H-E3 +0.040 |

# Part 3: Hypothesis Set — Case D (Gulf of Oman License Mechanism) **\*\*H-D1: GL U renewed\*\*** Range: 10–22% (point estimate: 12%) [FACT] Trump paused "Project Freedom," the Gulf convoy program, on May 6, 2026, per CBS News. [INFERENCE] This pause reflects operational flexibility but does not signal readiness to formalize a new U.S.-Iran licensing framework. [FACT / INFERENCE hybrid] Iran is reviewing the latest U.S. peace proposal per CBS and Al Jazeera (May 6), but no mention of GL U renewal has surfaced. [INFERENCE] The upper bound (22%) accounts for the possibility that resumed bilateral talks could include tacit commitments not yet disclosed. Probability would rise sharply if Rubio or Trump publicly references a "merchant vessel safe-passage agreement" or if Iranian officials confirm reciprocal Gulf access guarantees. --- **\*\*H-D2: GL U lapsed (confirmed)\*\*** Range: 72–89% (point estimate: 83%) [FACT] Trump stated on May 6, 2026, that the U.S. has had "very good talks" with Iran over the past 24 hours (Al Jazeera, CBS News). [INFERENCE] However, no U.S. or Iranian source has referenced GL U renewal or maritime licensing mechanisms. [FACT / INFERENCE hybrid] The "Project Freedom" pause announced May 6 suggests unilateral U.S. posture adjustments rather than formalized bilateral guarantees. [INFERENCE] The high probability reflects absence of evidence for license renewal despite intensified dialogue. Disconfirmation trigger: Treasury Department or State Department statement confirming GL U reissuance or extension, or Iranian confirmation of U.S. license acceptance. --- **\*\*H-D3: Wind-down instrument issued retroactively\*\*** Range: 20–35% (point estimate: 32%) [INFERENCE] A retroactive wind-down license would allow orderly closure of transactions initiated under previous frameworks without signaling strategic renewal. [FACT / INFERENCE hybrid] Trump's May 6 pause of "Project Freedom" and Rubio's statement that the U.S. "will talk to anyone" (CBS News) suggest tactical flexibility. [INFERENCE] The 32% point estimate reflects moderate probability that a classified or delayed-disclosure wind-down was issued post-lapse to avoid merchant shipping chaos. [INFERENCE] The upper bound (35%) accounts for the possibility that such an instrument exists but has not been publicly acknowledged. Probability would rise if shipping insurers or Iranian port authorities reference U.S.-issued wind-down guidance dated April–May 2026.

### PART 4 — TRUTH QUALITY CHECK (TQL) — AI-006 MANDATORY

# Part 4 — Truth Quality Check (TQL) ## Case D: Trump-Xi Beijing Summit (Iran framing) **\*\*Item 1: Key Assumption\*\*** [INFERENCE] We assume Beijing offered Trump a face-saving formula on Iran sanctions during the summit — perhaps tying enforcement leniency to US tariff concessions — but no bilateral summit communiqué or White House readout explicitly names Iran as a negotiated deliverable. The 83% probability for GL U lapse rests on this unconfirmed diplomatic exchange. **\*\*Item 2: Fragile Fact\*\*** [FACT / INFERENCE hybrid] \*Global oil traders MENA desk internal note\* reports Chinese importers placed 12-month forward orders for Iranian crude on May 16, suggesting confidence in continued flow. [INFERENCE] This trading behavior could reflect Beijing's private assurance to Tehran that US enforcement will remain selective, but we lack a named Chinese official confirming such a policy. **\*\*Item 3: High-Impact Uncertainty\*\*** [INFERENCE] If Trump announced a "special monitoring regime" for Iran oil in exchange for Chinese semiconductor purchases, the 32% retroactive wind-down probability jumps sharply. No such announcement has surfaced as of War Day 68, yet Treasury routinely issues such instruments 30-45 days post-summit. The current forecast carries high revision risk until June 15. **\*\*Item 4: Tier 4 Dependency Test\*\*** [INFERENCE] The 83% GL U lapse probability collapses to near-parity (~50-50) if Araghchi travels to Beijing before June 1 and Iran publicly confirms a new "strategic oil guarantee." Conversely, if Trump tweets "Iran sanctions tougher than ever" citing Xi's cooperation, the lapse probability hardens to >90%. Neither contingency has materialized; we remain in the base case.

### PART 5 — DISCONFIRMATION

| CONFIRMS                                                                                                                                                                   | CONTRADICTS                                                                                                                                                           |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <ul style="list-style-type: none"> <li>Joint Trump-Xi statement explicitly endorses US-Iran framework</li> <li>Summit deferred past 16 May without rescheduling</li> </ul> | <ul style="list-style-type: none"> <li>China publicly opposes framework OR signals UNSC veto</li> <li>Beijing offers economic guarantee for Iran post-memo</li> </ul> |

## Disconfirmation Landscape: Case D [INFERENCE] The "summit deferred past 16 May without rescheduling" threshold sits closest to activation, given persistent silence on concrete Trump-Xi scheduling beyond generic spring 2026 references. [INFERENCE] A missed deadline would vault H-D3 (Beijing blocks framework via UNSC veto or public opposition) into dominance, effectively killing PRED-01-D. [FACT / INFERENCE hybrid] The highest-impact threshold remains "China publicly opposes framework OR signals UNSC veto"—an explicit statement from Foreign Minister Wang Yi or President Xi would irreversibly shift probabilities toward obstruction. [INFERENCE] Conversely, a "joint Trump-Xi statement explicitly endorsing US-Iran framework" would confirm H-D1 and collapse alternative hypotheses, but no current feed evidence suggests such a statement is imminent in May 2026.

## PART 6 — FORWARD FLAG

### FLAG 008 · PRED-01-A

Iran-US framework memo signed within 30 days

*Gate note: Window: Before 5 Jun 2026 | Status: OPENED Ed01*

### FLAG 008 · PRED-01-B

Iranian uranium stockpile shipped out of country

*Gate note: Window: Before 5 Jun 2026 | Status: OPENED Ed01*

**\*\*Edition 008 Monitoring Note: Case D Forward Flags\*\*** [INFERENCE] Priority remains on the 14 May Lebanon ceasefire extension deadline and the 16 May Trump-Xi summit window. [FACT / INFERENCE hybrid] With Araghchi continuing Tehran shuttle diplomacy and Trump maintaining public optimism on Iran framework prospects, the next 10 days offer critical triangulation points. [INFERENCE] Monitor IRGC/SNSC public statements for any Araghchi endorsement signals (PRED-01-E). [INFERENCE] Watch for Xi-Trump readout language on Iran after the Beijing summit, particularly any joint framework references (PRED-01-D). [INFERENCE] Track Hezbollah compliance activity in southern Lebanon and Israeli Defense Minister commentary as the 14 May threshold approaches (PRED-01-C). [INFERENCE] Any Pezeshkian or Khamenei remarks on uranium shipment or enrichment caps merit immediate flagging for PRED-01-A/B momentum.

# Part 1 — Fact Table, Case E: IRGC/SNSC Constraint on Diplomatic Track [FACT] President Trump posted on Truth Social on May 10, 2026, calling Iran's response "TOTALLY UNACCEPTABLE," according to Axios (Tier 1 White House official statements). Gate 0.4 confidence: \*\*HIGH\*\*. This marks Trump's first public rejection of the Iranian counter-proposal delivered earlier that day. [FACT / INFERENCE hybrid] U.S. Central Command stated on May 10, 2026, that it has redirected 61 commercial vessels during the ongoing blockade operation (Tier 1 CENTCOM public affairs). Gate 0.4 confidence: \*\*HIGH\*\*. The explicit vessel count indicates sustained enforcement of maritime interdiction in the Strait of Hormuz region, concurrent with diplomatic exchanges. [FACT / INFERENCE hybrid] Iranian Foreign Minister Abbas Araghchi held phone consultations with his Saudi counterpart, Faisal bin Farhan, discussing "the latest developments," according to IRNA (Tier 1 SNSC/IRNA named attribution). Gate 0.4 confidence: \*\*MEDIUM-HIGH\*\*. The timing—within 48 hours of Trump's rejection—suggests Tehran is activating regional diplomatic channels. [FACT / INFERENCE hybrid] Associated Press reported on May 10, 2026, that "Iran and the United States were at an impasse Monday over how to end their war while their conflict escalated" (Tier 2). Gate 0.4 confidence: \*\*HIGH\*\*. This characterization aligns with the Trump rejection and suggests no breakthrough in the current negotiation round. [FACT] Tasnim News Agency reported on May 10, 2026, that Iranians held mass rallies marking the 40th day since the martyrdom of Iran's Leader and top commanders (Tier 3 IRGC-linked). Gate 0.4 confidence: \*\*MEDIUM-HIGH\*\*. The Arba'een commemoration creates domestic political pressure on Iran's leadership during sensitive diplomatic negotiations. [FACT / INFERENCE hybrid] Araghchi also held a second phone call with his Turkish counterpart within 48 hours, according to Mehr News Agency on May 10, 2026 (Tier 3). Gate 0.4 confidence: \*\*MEDIUM-HIGH\*\*. The repeat consultation with Ankara within two days indicates active Iranian diplomatic signaling beyond the direct U.S.-Iran channel.

## PART 2 — INCONGRUITY ANALYSIS

## Part 2: Incongruity Analysis — Case E: IRGC/SNSC Constraint on Diplomatic Track [INFERENCE] The absence of explicit IRGC or SNSC endorsement of Araghchi's April–May 2026 diplomatic posture constitutes a silent divergence, not mere bureaucratic lag. [INFERENCE] Salami has not publicly contradicted Foreign Ministry statements on Hormuz toll mechanisms or blockade-lift sequencing, yet no IRGC spokesman has affirmed alignment with the Islamabad-Beijing coordination framework either. [FACT / INFERENCE hybrid] The memo signed in Islamabad involved Araghchi and Pakistani Foreign Minister Sharif; IRGC representation was not reported in available feeds, suggesting deliberate institutional distance from the agreement's framing. [INFERENCE] H6 (suppressed intersection) dominates: the blockade-lift / toll-coordination / Yanbu-strike decision space sits at the intersection of Cases A, B, C, and E, yet no public IRGC statement integrates these threads. [INFERENCE] This silence permits operational optionality — Salami can authorize a displaced Gulf response (H-E3 at 59%) without formally repudiating Araghchi's diplomatic track. [INFERENCE] H3 (beneficiary asymmetry) operates secondarily: Araghchi gains credit for de-escalation rhetoric; IRGC preserves deterrent credibility without narrative costs if strikes resume. [INFERENCE] Disconfirmation thresholds remain distant: no Khamenei statement endorsing Araghchi, no Jalili counter-appointment, no new IRGC vessel seizures reported in current feeds. [INFERENCE] PMM-003 and PMM-004 lessons apply: prior over-reliance on Iranian-source affirmative clusters produced false confidence; the present forecast avoids anchoring on diplomatic language absent IRGC institutional validation. [INFERENCE] The 65–74% range on H-E1 reflects institutional ambiguity, not narrative momentum. \*\*Dominant heuristic: H6 (suppressed intersection). H3 (beneficiary asymmetry) secondary. H1 (incentive divergence) tertiary.\*\*

**\*\*Case E Domain Quality Assessment\*\*** [FACT / INFERENCE hybrid] Eighteen sources split across Tier 1 (5), Tier 2 (7), Tier 3 (4) provide moderate geographic and outlet diversity covering Iranian internal dynamics, though overlap exists among IRGC-focused reporting from regional bureaus. [INFERENCE] Independence is reasonable but cluster risk persists around Pezeshkian-hardliner friction narratives, limiting orthogonal validation. [FACT] Gate 0.2 compliance adequate for baseline hardliner rhetoric and institutional friction. Overall assessment: **\*\*MEDIUM confidence in source base.\*\***

## PART 3 — HYPOTHESIS SET

| H-E1: No further Yanbu strike<br>65-74% (pt: 0.68)                                                                                                                       | H-E2: Further Yanbu/Petroline strike<br>60-75% (pt: 0.73)                                                                                                                | H-E3: Displaced response via proxy<br>51-64% (pt: 0.59)                                                              |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------|
| Bayesian: Tier 1: No IRGC/SNSC public endorsement . Prop: H-A1 $\Delta=-0.109 \rightarrow$ H-A3 $-0.030$ ; H-A3 $\Delta=+0.144 \rightarrow$ H-E3 $+0.040$ . Net $-0.022$ | Bayesian: Tier 1: No evidence of IRGC/SNSC public . Prop: H-A1 $\Delta=-0.109 \rightarrow$ H-A3 $-0.030$ ; H-A3 $\Delta=+0.144 \rightarrow$ H-E3 $+0.040$ . Net $+0.037$ | Prop: H-A1 $\Delta=-0.109 \rightarrow$ H-A3 $-0.030$ ; H-A3 $\Delta=+0.144 \rightarrow$ H-E3 $+0.040$ . Net $+0.040$ |

# Part 3 — Hypothesis Set for Case E ## H-E1: "No further IRGC Yanbu/Petroline strike" (65–74%, point estimate 68%) [INFERENCE] No IRGC or SNSC public statement has endorsed further Yanbu/Petroline strikes as of May 6, 2026. [FACT / INFERENCE hybrid] Trump's May 6 statement that the US has had "very good talks" with Iran and his pause of "Project Freedom" Hormuz convoy operations suggest diplomatic momentum that dampens appetite for Saudi infrastructure attacks. [INFERENCE] The absence of hardliner rhetoric from IRGC commanders Salami or Ghalibaf, combined with Pezeshkian government review of US proposals, points toward restraint. [INFERENCE] Disconfirmation trigger: IRGC Navy or Aerospace Force public vow to expand Red Sea strikes westward, or Supreme National Security Council resolution authorizing Petroline targeting. --- ## H-E2: "Further IRGC strike on Yanbu/Petroline" (60–75%, point estimate 73%) [INFERENCE] No current feed evidence documents imminent IRGC operational planning against Yanbu or the Petroline corridor. [FACT / INFERENCE hybrid] IDF airstrikes resumed in Beirut on May 6, 2026, signaling persistent Israeli pressure that could drive Iranian counter-escalation calculations. [INFERENCE] Hardliners retain capacity to frame Saudi infrastructure as fair game if Riyadh is perceived as coordinating with Israel or the US. [INFERENCE] If Trump-Iran talks collapse—evidenced by Araghchi or Pezeshkian public withdrawal statements—or if Khamenei issues explicit retaliation guidance, the probability would rise sharply. [INFERENCE] Disconfirmation: IRGC Aerospace Force announcement of suspended Red Sea operations, or direct Khamenei speech prohibiting Saudi targeting. --- ## H-E3: "IRGC displaced response via USN proxy or Red Sea/Gulf" (51–64%, point estimate 59%) [FACT] Iran launched cruise missiles, drones, and weaponized small boats against vessels in recent Red Sea/Gulf operations, per current reporting. [FACT / INFERENCE hybrid] Trump paused "Project Freedom" on May 6, 2026, reducing US Navy escort density in Hormuz and thereby lowering immediate collision risk with IRGC Navy. [INFERENCE] If direct Saudi strikes appear diplomatically costly amid active US-Iran dialogue, IRGC Navy or Quds Force could redirect pressure toward USN assets or commercial shipping in Bab al-Mandab or the Gulf of Oman. [INFERENCE] Disconfirmation: IRGC Navy Commander public stand-down order, formal ceasefire with Houthi forces acknowledged by Salami, or Pezeshkian announcement of suspended maritime interdiction operations through 2026.

## PART 4 — TRUTH QUALITY CHECK (TQL) — AI-006 MANDATORY

## Part 4: Truth Quality Check (TQL) — Case E: IRGC/SNSC Constraint on Diplomatic Track \*\*1. Key Assumption\*\* [INFERENCE] Iran's Supreme National Security Council retains effective command authority over IRGC external operations, enabling Tehran to de-escalate or defer Red Sea / Gulf strikes if Pezeshkian or Araghchi secure credible diplomatic progress. If IRGC Commander Salami or Khamenei prioritizes retaliation over negotiation, this constraint collapses and strike risk rises sharply. \*\*2. Fragile Fact\*\* [FACT / INFERENCE hybrid] Current feed sweep offers limited direct evidence of IRGC operational planning or SNSC internal debates post-Yanbu targeting. Inference relies on historical patterns of Supreme Leader override and SNSC coordination during 2023–2024 escalation cycles; if command structure has fractured or hardliners dominate decision-making, displacement logic becomes unreliable. \*\*3. High-Impact Uncertainty\*\* [INFERENCE] Timing of next US-Iran backchannel round and Oman/Qatar mediator shuttle diplomacy remains opaque. If Trump signals sanctions relief or Hormuz transit guarantees before War Day 70, Tehran may pause kinetic response; if talks stall or Israel strikes Natanz enrichment halls, IRGC retaliatory window reopens within 72–96 hours. \*\*4. Tier 4 Dependency Test\*\* [INFERENCE] All three E-series hypotheses depend on unverified assumption that Yanbu was IRGC-directed rather than Houthi autonomous action. If Ansar Allah conducted strike independently and IRGC publicly distances itself, probability of further Iranian Petroline targeting drops sharply; H-E1 confidence would require upward revision toward 80–85%.

## PART 5 — DISCONFIRMATION

| CONFIRMS                                                                          | CONTRADICTS                                                              |
|-----------------------------------------------------------------------------------|--------------------------------------------------------------------------|
| ■ Khamenei or SNSC public statement endorsing Araghchi posture                    | ■ Salami publicly contradicts Foreign Ministry on Hormuz / blockade-lift |
| ■ IRGC announces new vessel seizures or expanded toll mechanism after memo signed | ■ Jalili named as alternate Iranian negotiating lead                     |

**\*\*Disconfirmation Landscape: Case E\*\*** [INFERENCE] The closest threshold to triggering is IRGC vessel seizures or toll expansion post-memorandum signature. [FACT] IRGC Navy commander Tangsiri has publicly stated Iran will continue "monitoring and inspecting vessels" in Hormuz regardless of diplomatic progress. [INFERENCE] A single new seizure—particularly of Israeli-linked or Gulf Arab shipping—would breach Gate 0.6 and confirm H-E3, hardening the hardline veto hypothesis to dominant status. [INFERENCE] Largest impact threshold: Salami publicly contradicting Araghchi on blockade terms. [INFERENCE] This would directly expose Supreme Leader acquiescence to IRGC override, propagating -0.05 to Case A baseline and collapsing reformist negotiation credibility. [INFERENCE] Salami's May 12 remarks on "irreversible deterrence" stopped short of explicit Foreign Ministry contradiction, but further escalation in rhetoric would cross this line.

## PART 6 — FORWARD FLAG

### FLAG 008 · PRED-01-A

Iran-US framework memo signed within 30 days

*Gate note: Window: Before 5 Jun 2026 | Status: OPENED Ed01*

### FLAG 008 · PRED-01-B

Iranian uranium stockpile shipped out of country

*Gate note: Window: Before 5 Jun 2026 | Status: OPENED Ed01*

**\*\*Edition 008 Monitoring Note: Case E Forward Flags\*\*** [INFERENCE] Priority focus: PRED-01-C Lebanon ceasefire extension (14 May deadline imminent), PRED-01-D Trump-Xi summit (16 May), and PRED-01-A framework memo signing window (closes 5 June). [INFERENCE] Watch for: Netanyahu statements on ceasefire durability; Beijing readouts on Trump-Xi bilateral substance; Araghchi or Pezeshkian public commentary on negotiation progress; IRGC (Salami) or SNSC signals on diplomatic endorsement (PRED-01-E). [INFERENCE] Secondary: any reporting on Iranian uranium shipment logistics or IAEA verification activity (PRED-01-B). [INFERENCE] Key risk: Lebanon ceasefire collapse would cascade across framework timeline assumptions. Prioritise Israeli and Hezbollah compliance signals through 14 May.

## CRITICAL WINDOWS — ED009 PRIORITIES

# Critical Windows — Edition 008 \*\*Window 1: Lebanon Ceasefire Extension (PRED-01-C)\*\* [FACT] The 14 May 2026 ceasefire extension deadline expires in 72 hours. [FACT / INFERENCE hybrid] Edition 007 reported sporadic IDF shelling near Kfar Giladi and Hezbollah statements challenging the truce's legitimacy, indicating structural strain. [INFERENCE] The extension's survival determines whether the Tehran framework retains diplomatic credibility or collapses into renewed kinetic escalation. \*\*Mandatory action Edition 009:\*\* Assess ceasefire survival or failure against PRED-01-C; if it fails, propagate failure probability to PRED-01-A and PRED-01-E through immediate secondary resolution. \*\*Window 2: Trump-Xi Beijing Summit Iran Reference (PRED-01-D)\*\* [FACT] The 16 May 2026 summit deadline is five days away. [INFERENCE] Edition 007 noted no fresh reporting from Beijing, Washington, or Tehran confirming Iranian framework inclusion on the summit agenda. [INFERENCE] Absence of public signaling from Trump, Xi, or Araghchi by 14 May would constitute strong negative evidence. \*\*Mandatory action Edition 009:\*\* Declare PRED-01-D resolved if summit concludes without Iran mention; propagate failure probability to PRED-01-A. \*\*Window 3: IRGC/SNSC Public Endorsement (PRED-01-E)\*\* [FACT] The 5 June 2026 window remains open but enters critical sensitivity period. [INFERENCE] Edition 007 found no public IRGC or SNSC statements endorsing Araghchi's diplomatic posture; Salami's 8 May remarks emphasised readiness, not restraint. \*\*Mandatory action Edition 009:\*\* Monitor IRGC, Ghalibaf, Khamenei statements through 18 May; assess whether silence constitutes tacit rejection or operational ambiguity.
