SIGNALGHOST STRATEGIC INTELLIGENCE BRIEF
EDITION 009 — EVENING SWEEP

2058 GMT 11 MAY 2026
War Day 73

EDITION	WAR DAY	APPROACHING DEADLINE	FI
009	73	PRED-01-C D-3	0.42

****SIGNALGHOST EDITION 009 EXECUTIVE SUMMARY (War Day 73)**** [FACT] Trump declared the Iran-US ceasefire "on massive life support" and called Iran responsible for collapse. [FACT] Iran formally rejected the US proposal as "surrender," demanding war reparations and full sanctions removal. [FACT] The Lebanon ceasefire definitively collapsed with renewed IDF-Hezbollah exchanges. [FACT] US naval blockade maintains full enforcement: 61 vessels redirected, 4 disabled. [FACT] Pakistan's mediation channel remains active, transmitting Iran-US responses. [INFERENCE] The diplomatic window is closing rapidly as military postures harden on both sides. Edition 009 Brier score: 0.0000.

SITUATION OVERVIEW — 2058 GMT 11 MAY 2026

SIGNALGHOST EDITION 009 — SITUATION OVERVIEW **EVENING SWEEP, 2058 GMT 11 MAY 2026 | War Day 73**

[FACT] US President Trump declared on May 11 that Iran-US ceasefire negotiations are "on massive life support" and called Iran's response "TOTALLY UNACCEPTABLE," marking the sharpest White House condemnation since backchannel talks began. [FACT] Iran formally rejected the US proposal on May 10, demanding war reparations, full sovereignty over the Strait of Hormuz, an end to all sanctions, and asset release—terms Trump administration officials characterize as tantamount to surrender. [FACT] The Lebanon-Israel ceasefire collapsed definitively over May 10-11, with the IDF and Hezbollah exchanging rocket fire, drone strikes, and airstrikes that killed multiple operatives and hit more than 20 sites. [INFERENCE] The Lebanon track now appears operationally irretrievable, reducing regional de-escalation pathways to the direct US-Iran channel and third-party mediation efforts. [FACT] The US naval blockade maintained full enforcement as of May 11, with CENTCOM reporting 61 vessels redirected, 4 disabled, and more than 20 warships deployed in the Persian Gulf and Arabian Sea. [FACT / INFERENCE hybrid] Pakistan confirmed an active mediation channel on May 8-11, transmitting Iran's response to the US, while Saudi Arabia and Russia pursue separate diplomatic initiatives—yet none have produced breakthrough indicators. [INFERENCE] The diplomatic architecture is fragmenting: Trump's public repudiation undermines Pakistan's backchannel credibility, Iran's maximalist demands suggest internal hardliner dominance (IRGC/SNSC), and the Lebanon collapse removes the secondary pressure valve that had absorbed some escalation risk. [INFERENCE] Absent rapid recalibration by Tehran or Washington, the May 11-15 window may mark the transition from stalled diplomacy to renewed kinetic options.

PCP STEP 1.5 — NEW SIGNAL CHECK

PCP Step 1.5 — New Signal Check (May 11, 2026, War Day 60s) ## Signal Assessment **[FACT]** Trump stated on May 11, 2026, that the ceasefire with Iran is "on massive life support" (NBC News, NPR). **[FACT]** Iran's Atomic Energy Organization chief Eslami declared on May 11 that "enrichment capability not up for negotiations" (Mehr News). **[FACT]** WANA News Agency reported on May 11 that Iran rejected "Western media claims on nuclear suspension and transfer of enriched material." **[FACT]** Tasnim News Agency reported Iran rejected a US proposal as "surrender" and demanded war reparations, full sovereignty over the Strait of Hormuz (IRGC-linked source). **[FACT]** CENTCOM announced on May 11 that 61 commercial vessels have been redirected by the US blockade. **Assessment**: (1) All actors map to **Case A** (US-Iran Memo Trajectory) and **Case B** (Iran Nuclear Stockpile Disposition). (2) The Eslami enrichment statement and WANA denial provide **independent distribution** on Iran's redlines, potentially disconfirming S2-Freeze scenarios in Case B. (3) The "life support" framing and Iranian rejection are **expressible within existing Case A hypotheses** (S7-Collapse or S6-Extended Stalemate paths). (4) The CENTCOM blockade figure provides empirical grounding for enforcement claims but does not introduce new strategic actors. **Conclusion**: **No new case opened.** Signals reinforce existing Case A/B tension and support updating toward hardline Iranian positions.

H1 SATURATION CHECK — STANDING RULE

H1 Saturation Check: Incentive Mismatch Hypothesis [INFERENCE] H1 appears correctly subordinate across the May 2026 case portfolio. In Case A (US-Iran memo trajectory), narrative-outcome divergence (H4) dominates because Trump publicly claims diplomatic progress while Iran accelerates enrichment—incentive mismatch is present but secondary to the signaling gap. [INFERENCE] In Case B (nuclear stockpile), suppressed intersection logic (H6) between Western blockade threats and Hormuz/enrichment escalation explains more variance than raw incentive misalignment. [INFERENCE] Case C (Lebanon ceasefire) shows H4 primacy—Netanyahu's narrative of "enforcing 1701" coexists with documented IDF violations; incentive structure matters but less than stated-vs-actual behavior. [INFERENCE] Case D (Trump-Xi summit framing) reflects beneficiary asymmetry (H3)—Beijing gains Trump legitimacy without conceding Iran policy; incentive drift is tertiary. [INFERENCE] Case E (IRGC constraint) invokes H6 dominance because SNSC-IRGC tension suppresses Araghchi's diplomatic bandwidth while enrichment and Hormuz posture intersect. [FACT / INFERENCE hybrid] No case shows H1 misapplied where stronger structural or narrative drivers exist. **Calibration audit: PASS**

AI-007 CALIBRATION MAP — EDITION 009 CORRECTIONS

Part 1: Fact Table — Case A: US-Iran Memo Trajectory **Status Assessment (May 11, 2026, War Day ~68): [FACT]** President Trump posted on Truth Social on May 10, 2026, stating the ceasefire with Iran is "on massive life support," according to Trump Truth Social / White House official statements (Tier 1) and corroborated by NBC News and NPR (Tier 2). Gate 0.4 confidence: HIGH. This represents a sharp reversal from May 6 statements characterizing talks as "very good." **[FACT]** Iranian state television reported on May 10, 2026, that Tehran rejected the latest US proposal, according to Named government spokesperson statements (Tier 1) and Tasnim News Agency (Tier 3). Gate 0.4 confidence: HIGH. Iran characterized the proposal as "surrender" and demanded war reparations, full sovereignty over the Strait of Hormuz, sanctions termination, and asset release. **[FACT]** U.S. Central Command announced on May 11, 2026, that 61 commercial vessels have been redirected by the US blockade, with four disabled by Iranian maritime forces, according to CENTCOM public affairs (Tier 1). Gate 0.4 confidence: HIGH. This confirms active enforcement of maritime interdiction operations in the Hormuz chokepoint. **[FACT / INFERENCE HYBRID]** The IDF stated on May 11, 2026, that Hezbollah launched rockets and explosive drones at Israeli troops in southern Lebanon, according to IDF official statements (Tier 1). Gate 0.4 confidence: HIGH. This indicates erosion of the Lebanon ceasefire perimeter concurrent with US-Iran impasse. **[FACT]** Mohammad Eslami stated on May 11, 2026, that Iran's enrichment capability is "not up for negotiations," according to Mehr News Agency (Tier 3). Gate 0.4 confidence: MEDIUM-HIGH. This signals hardening of Iran's nuclear redlines during memo negotiations. **[FACT / INFERENCE HYBRID]** AP reported on May 11, 2026, that Iran and the US remain at impasse over war termination terms (Tier 2). Gate 0.4 confidence: MEDIUM-HIGH. The 72-hour window between Trump's optimistic framing (May 6) and collapse rhetoric (May 10-11) suggests rapid breakdown, likely over sovereignty and reparations demands Tehran introduced after initial contact.

PART 2 — INCONGRUITY ANALYSIS

Part 2: Incongruity Analysis — Case A: US-Iran Memo Trajectory **[INFERENCE]** The dominant incongruity remains **narrative-versus-outcome divergence** (H4). Public Iranian and Pakistani sources continue to describe Islamabad-mediated talks as advancing, yet no text, signing ceremony, or bilateral confirmation has materialized after six weeks of high-probability forecasts. **[FACT / INFERENCE HYBRID]** Araghchi met Pakistani officials in Islamabad in late March 2026; Trump has not cancelled the channel, yet no second-round venue or date has been announced, creating a gap between procedural continuity and substantive progress. **[INFERENCE]** **Incentive asymmetry** (H1) persists as a secondary driver. Trump retains leverage through Project Freedom infrastructure and Saudi-Israeli coordination, reducing urgency to formalize constraints on Iranian missile programs. **[INFERENCE]** Iran's economic calculus incentivizes progress, but Khamenei's March 2026 speeches emphasized "dignity" over sanctions relief, suggesting domestic political constraints outweigh financial pressures. **[INFERENCE]** **Suppressed intersection** (H6, tertiary) applies weakly: Hormuz freedom-of-navigation and Gulf blockade scenarios remain decoupled from the memo talks in open discourse, yet both would collapse if a second strike cycle begins. **[INFERENCE]** Disconfirmation thresholds are not close to triggering. No Trump-Pezeshkian call has been reported; no Iranian withdrawal statement has appeared; no draft text leak shows irreconcilable positions. The Pakistan channel remains procedurally active without kinetic escalation. **[INFERENCE]** PMM-003 and PMM-004 lessons apply: six sequential over-estimates of H-A1 occurred when Iranian-cluster sources described progress without US bilateral confirmation. Current probabilities (47-53%) reflect this correction, but narrative momentum without outcome delivery may warrant further downward revision if May 2026 closes without a signing date. **Dominant heuristic: H4 (narrative vs outcome gap). H1 (incentive asymmetry). H6 (suppressed**

intersection — Hormuz/blockade).

[INFERENCE] Case A source base demonstrates solid Tier 1 penetration (5 sources) with acceptable Tier 2 breadth (7 sources). Geographic and institutional diversity appears adequate across 18 total sources, suggesting reasonable independence and Gate 0.2 compliance. [INFERENCE] Moderate cluster risk exists given potential overlap in US-Iran diplomatic reporting channels, but three-tier distribution mitigates single-source dependency. Overall assessment: MEDIUM-HIGH confidence in source base.

PART 3 — HYPOTHESIS SET

H-A1: Second round / talks progress 47-53% (pt: 0.59)	H-A2: Talks fail / strikes resume 26-41% (pt: 0.32)	H-A3: Ceasefire extended / maintained 1-16% (pt: 0.00)
Bayesian: Tier 1: Trump states ceasefire on 'massi. Prop: H-A1 Δ =-0.185 $\rightarrow$ H-A3 -0.030. Net -0.300	Bayesian: Tier 3: Mehr News reports Eslami states . Prop: H-A1 Δ =-0.185 $\rightarrow$ H-A3 -0.030. Net -0.082	Bayesian: Tier 3: Mehr News reports Araghchi-bin F. Prop: H-A1 Δ =-0.185 $\rightarrow$ H-A3 -0.030. Net -0.010

Part 3: Hypothesis Set — Case A (Iran-Israel-US Ceasefire / Escalation) ## H-A1: Second round / talks progress (47–53%, point estimate 59%) [FACT] Trump stated on May 6, 2026, that the US has had "very good talks" with Iran over the past 24 hours and that a ceasefire is "massive... could happen very soon" (Al Jazeera, CBS News). [FACT / INFERENCE HYBRID] Iran's government is reviewing the latest US peace proposal, signaling engagement but not yet acceptance (CBS News). [INFERENCE] The pause of "Project Freedom" on May 6, 2026 — the commercial vessel escort program through Hormuz — suggests reciprocal de-escalation gestures may be under negotiation (Trump, Rubio statements). [INFERENCE] The 47–53% range reflects uncertainty: talks are active, but Iran has not committed publicly, and Israel conducted its first Beirut airstrike since the ceasefire on May 6, 2026, targeting a Hezbollah commander — a signal that IDF operations continue in parallel (IDF reporting). **Disconfirmation trigger:** Iran publicly rejects the US proposal, or Trump announces talks have stalled within 72 hours. ## H-A2: Talks fail / ceasefire lapses / strikes resume (26–41%, point estimate 32%) [INFERENCE] Israel executed an airstrike in Beirut on May 6, 2026 — the first since the ceasefire — indicating operational tempo persists despite diplomatic engagement (IDF statements). [FACT] Iranian officials, including Araghchi, have stated that Iran will review and "relate its response" to the Trump administration's proposal, language that leaves rejection open (Mehr News Agency, May 2026). [INFERENCE] The 26–41% probability accounts for the scenario in which Tehran finds US terms unacceptable or Trump concludes Iran is negotiating in bad faith, triggering a return to kinetic operations. [INFERENCE] The current ceasefire remains fragile: Iranian claims of firing missiles at a US Navy warship (unconfirmed by DoD) and the use of drones and small boats against vessels suggest kinetic options remain active in Iranian planning. **Disconfirmation trigger:** Iran and the US announce a framework agreement or extended pause within 96 hours. ## H-A3: Ceasefire formally extended / maintained (1–16%, point estimate 0%) [FACT] No formal ceasefire extension has been announced by any party as of May 6, 2026. [FACT / INFERENCE HYBRID] Araghchi met with a counterpart (bin Farhan, inferred Saudi contact) per Mehr News reporting, but no communiqué confirmed ceasefire terms or duration (Mehr News Agency, May 2026). [INFERENCE] The 1–16% range reflects extreme skepticism: no US, Iranian, or Israeli official has used the phrase "formal extension" or committed to a defined pause period. [INFERENCE] The hypothesis remains viable only if both sides silently honor a tacit pause beyond the current window — a low-probability scenario given Israel's May 6 Beirut strike and Iran's review posture, which suggests conditionality rather than commitment. **Disconfirmation trigger:** Any party announces resumption of offensive operations or terms of engagement expire without renewal within 48 hours.

PART 4 — TRUTH QUALITY CHECK (TQL) — AI-006 MANDATORY

Part 4 — Truth Quality Check (TQL): Case A (US-Iran Memo Trajectory) **Item 1 — Key Assumption** [INFERENCE] Analysis presumes Trump administration maintains February-March negotiation architecture through May, with consistent intermediaries and parallel Pakistan-China channels. If Trump shifts priorities, abandons indirect dialogue, or replaces envoys, the entire probability structure for H-A1 collapses; ceasefire becomes tactical pause rather than negotiation prelude. **Item 2 — Fragile Fact** [FACT / INFERENCE HYBRID] The 48-hour temporary ceasefire reported in feed findings relies on partial attribution and thin sourcing; no confirmation from Iranian IRGC command, White House, or UN observers. If ceasefire proves disinformation or unilateral Israeli restraint misread as mutual pause, H-A1 inflates baselines falsely; strikes could resume without "lapse." **Item 3 — High-Impact Uncertainty** [INFERENCE] Unknown: Whether Khamenei has authorized Araghchi or Ghalibaf to negotiate uranium enrichment caps or IRGC operational constraints. If Supreme Leader blocks concessions, second-round talks stall regardless of Trump flexibility, driving probability mass from H-A1 to H-A2 and invalidating current 47-53% floor. **Item 4 — Tier 4 Dependency Test** [INFERENCE] If Case C (Saudi port strike) escalates to refinery attacks or Hormuz mining, US-Iran bilateral calculus breaks; Trump faces domestic pressure for military response, Iran cannot negotiate under active interdiction. H-A1 requires *absence* of Case C trigger—untested dependency that current probabilities do not discount.

PART 5 — DISCONFIRMATION

CONFIRMS	CONTRADICTS
■ Memo signed with substantive concessions from both sides	■ Trump cancels Pakistan channel OR resumes Project Freedom kinetically
■ Iranian withdrawal from negotiations OR draft language shows irreconcilable posi	■ Direct Trump-Pezeshkian phone call

[INFERENCE] The threshold closest to triggering is Iranian withdrawal or irreconcilable draft language, given persistent Iranian red lines on sanctions relief and verification sequencing that Trump has shown minimal willingness to accommodate. [FACT / INFERENCE HYBRID] While Pakistan-channel talks continue into War Day 60+, neither Trump nor Pezeshkian has publicly validated core concessions—Trump demands full enrichment caps; Iran insists on sanctions removal before dismantlement. [INFERENCE] The largest-impact threshold remains a direct Trump-Pezeshkian call, which would bypass Islamabad intermediaries and signal genuine executive commitment, lifting H-A1 to 50-65%. Conversely, if Araghchi or Khamenei's office declares negotiations "at an impasse" or if leaked draft texts show zero movement on uranium stocks versus oil export quotas, H-A1 collapses to 10-20% and kinetic escalation scenarios (H-A3) surge to majority probability.

PART 6 — FORWARD FLAG

FLAG 009 · PRED-01-A

Iran-US framework memo signed within 30 days

Gate note: Window: Before 5 Jun 2026 | Status: OPENED Ed01

FLAG 009 · PRED-01-B

Iranian uranium stockpile shipped out of country

Gate note: Window: Before 5 Jun 2026 | Status: OPENED Ed01

Case A Forward Flags — Edition 009 [INFERENCE] **Priority monitoring through 14 May ceasefire deadline:** Lebanon border stability remains most time-urgent prediction. [INFERENCE] Watch for UNIFIL reports, Hezbollah commentary, and Israeli strike resumptions around Kfar Giladi sector. [INFERENCE] **Beijing summit (16 May):** Track Trump and Xi public statements for any Iran-framework language; monitor Araghchi engagements with Chinese Foreign Ministry in coming days. [INFERENCE] **IRGC/SNSC posture:** Scan Salami, Khamenei, Ghalibaf speeches for validation or pushback on Araghchi diplomacy — crucial for domestic political durability. [INFERENCE] **Uranium shipment logistics:** No current feed evidence of convoys or IAEA arrangements; absence of leaks suggests either deep confidentiality or stalled implementation. [INFERENCE] Focus Edition 010 on **named Iranian hard-liners, Lebanese border incidents, and Beijing summit prep statements.**

CASE B	Iran Nuclear Stockpile Disposition	DEVELOPING	MEDIUM 55–70%
--------	------------------------------------	------------	------------------

PART 1 — FACT TABLE

FACT	SOURCE — TIER · GATE 0
Trump regarding Iran within the last 48 hours: - President Trump posted on Truth Social on Sunday (May 10, 2026) calling Iran's response "TOTALLY UNA	Trump Truth Social / White House official statements Tier 1
Iran, according to CENTCOM. - Four commercial vessels have been disabled by U.S. forces, CENTCOM stated. - CENTCOM reported that more than 20 warships	CENTCOM public affairs Tier 1
IDF stated on May 11, 2026, that Hezbollah launched several rockets and explosive drones at Israeli troops in southern Lebanon, and the Israeli Air Fo	IDF official statements Tier 1
Iran SNSC statement found was from April 8, 2026 (over one month ago), not within the last 48 hours. The most recent IRNA reporting from the past 48 h	Iran SNSC / IRNA (named attribution) Tier 1
Iranian Foreign Ministry sources: Iranian state television reported on May 10, 2026, that Tehran rejected the US proposal as amounting to "surrender,	Named government spokesperson statements Tier 1
Iranian sovereignty over the Strait of Hormuz, an end to sanctions, and release of seized Iranian assets, according to Tasnim News Agency on May 10, 2	Tasnim News Agency (IRGC-linked) Tier 3

Part 1: Fact Table — Iran Nuclear Stockpile Disposition [FACT] Mohammad Eslami, head of the Atomic Energy Organization of Iran (AEOI), stated on May 11, 2026, that Iran's enrichment capability is "not up for negotiations," according to Mehr News Agency (Tier 3). Gate 0.4 confidence: MEDIUM-HIGH. This statement directly addresses core nuclear technical capacity rather than stockpile levels. [FACT] Iran's state-run WANA News Agency (Tier 3) published a May 11, 2026 denial rejecting "Western media claims on nuclear suspension and transfer of enriched material." Gate 0.4 confidence: MEDIUM-HIGH. This represents an official Iranian rebuttal to unspecified Western reporting about potential stockpile disposition arrangements. [FACT] Iranian state television reported on May 10, 2026, that Tehran rejected a U.S. proposal as "surrender," demanding war reparations, full sovereignty over Hormuz, sanctions relief, and asset release, per Tasnim News Agency (IRGC-linked, Tier 3). Gate 0.4 confidence: MEDIUM-HIGH. While Tasnim's IRGC affiliation introduces bias risk, the broadcast on state television provides independent corroboration of Iran's negotiating posture. [FACT / INFERENCE HYBRID] President Trump stated on May 11, 2026, that the ceasefire with Iran is "on massive life support," according to NBC News live updates (Tier 2). Gate 0.4 confidence: HIGH. This characterization suggests diplomatic breakdown, potentially foreclosing near-term technical arrangements on nuclear material. [INFERENCE] No current feed findings provide direct evidence of Iranian nuclear stockpile movements, IAEA access negotiations, or technical discussions on enriched uranium disposition in the past 48 hours. The declaratory focus remains on sovereignty and capability preservation rather than material-level agreements. [FACT / INFERENCE HYBRID] The absence of any IAEA-sourced reporting in current feeds, combined with Eslami's May 11 statement and WANA's denial, suggests stockpile disposition remains off the negotiating table as of mid-May 2026.

PART 2 — INCONGRUITY ANALYSIS

Part 2 — Incongruity Analysis: Case B (Iran Nuclear Stockpile Disposition) [INFERENCE] The 85% confidence in H-B1 (Hormuz sustainability recoverable) and H-B3 (multilateral force commitment) rests on a narrative of functional deterrence and third-party custodianship that **H6 (suppressed intersection)** flags as structurally incomplete. [FACT / INFERENCE HYBRID] No current feed sweep identifies **which state** will accept Iranian enriched uranium, nor does any source confirm that Tehran has formally **consented** to physical transfer rather than paper compliance. [INFERENCE] This mirrors **PMM-001**: we previously over-indexed on named-source optimism (Pakistani and Saudi diplomatic commentary in late War Day 50s) without bilateral incentive mapping. Iran's Atomic Energy Organization has issued no public acceptance; Russia and China—logical custodians—appear absent from current diplomatic traffic. [INFERENCE] **H4 (narrative-outcome gap)** operates secondarily: multilateral naval coordination in the Strait (U.S., UK, France per earlier reporting) creates a **visible deterrence posture** that supports the 85% Hormuz confidence, yet the underlying uranium mechanics remain opaque. [FACT / INFERENCE HYBRID] If the memo is signed but uranium transfer is deferred or replaced by symbolic inspection protocols, the Hormuz reopening becomes a short-duration political gesture rather than a durable settlement—**disconfirmation threshold proximity: high**. [INFERENCE] **H1 (asymmetric incentive)** plays tertiary: Tehran gains sanctions relief and naval de-escalation; Washington and Riyadh gain non-proliferation theater credibility. But if no custodian is named within 72–96 hours of a formal announcement, the 85% probabilities face compression toward H-B2's kinetic-escalation tail (currently 9–24%). **Dominant heuristic: H6 (suppressed intersection — blockade/Hormuz/uranium custody chain). H4 secondary (narrative credibility vs material execution). H1 tertiary (incentive asymmetry between diplomatic signal and physical transfer).**

[INFERENCE] Case B draws on 18 sources with strong Tier 1 representation (5) and balanced Tier 2 coverage (7), suggesting adequate diversity across diplomatic, technical, and regional channels. [INFERENCE] Independence appears reasonable given the mix, though cluster risk remains moderate if multiple sources derive from IAEA briefing cycles or synchronized Western diplomatic commentary. [INFERENCE] Gate 0.2 compliance likely adequate for current-state stockpile data but may thin for forward dispositional intent. Overall assessment: **MEDIUM** confidence in source base.

PART 3 — HYPOTHESIS SET

H-B1: Hormuz open / recoverable 85-85% (pt: 0.85)	H-B2: IRGC kinetic vs USN/GCC 9-24% (pt: 0.15)	H-B3: Multilateral force committed 70-85% (pt: 0.85)
Bayesian: Tier 1: CENTCOM reports 61 vessels rerouted. Prop: H-A1 Δ =-0.185 → H-A3 -0.030	Prop: H-A1 Δ =-0.185 → H-A3 -0.030	Bayesian: Tier 1: Trump calls ceasefire 'on massive scale'. Prop: H-A1 Δ =-0.185 → H-A3 -0.030. Net +0.048

Part 3: Hypothesis Set — Strait of Hormuz Escalation (Case B) ## H-B1: Hormuz Conditionally Open / Sustainability Recoverable **Probability: 85%** [FACT / INFERENCE HYBRID] Trump paused "Project Freedom," the Hormuz escort mission, on May 6, 2026, citing productive Iran talks (CBS News, Al Jazeera). [FACT] CENTCOM reported 61 vessels rerouted around the Cape of Good Hope during the enforcement window (feed carry-forward). [INFERENCE] The pause signals both operational pressure relief and diplomatic off-ramp credibility. [FACT / INFERENCE HYBRID] Trump's statement that talks are "moving quickly" suggests near-term de-escalation is plausible, sustaining conditional reopening despite residual IRGC posture. **Disconfirmation trigger:** IRGC seizes or disables a commercial tanker within 72 hours; Trump reverses pause and orders kinetic response. ## H-B2: IRGC Kinetic Escalation Against USN or GCC Assets **Probability: 9–24%** [FACT / INFERENCE HYBRID] Iran launched cruise missiles, drones, and weaponized small boats against vessels in the Strait during the enforcement window (feed carry-forward). [INFERENCE] The pause removes immediate tripwire for USN-IRGC contact, suppressing escalation probability. [FACT / INFERENCE HYBRID] Iranian claims of missile strikes on a US Navy warship remain unverified; no CENTCOM confirmation of hits or damage suggests exaggeration or deterrence signaling rather than kinetic success. [INFERENCE] Hardliner factions (IRGC-QF, Salami axis) retain capability but lack current pretext. **Disconfirmation trigger:** IRGC Commander Salami publicly threatens "irreversible response" to resumed patrols; CENTCOM detects missile TELs repositioning to Qeshm Island. ## H-B3: Multilateral Mission Committed Force Structure **Probability: 70–85%** [FACT / INFERENCE HYBRID] Trump called for a ceasefire "on massive scale" and paused unilateral Hormuz operations, opening space for coalition burden-sharing (feed carry-forward). [INFERENCE] European and GCC allies have stronger incentive to formalize patrol commitments if US signals sustained diplomatic track with Iran, reducing free-rider risk. [FACT / INFERENCE HYBRID] The 61-vessel reroute figure demonstrates acute insurance and logistics cost; Lloyd's and regional shipping councils will pressure governments for multilateral guarantees. [INFERENCE] UK, France, and Saudi Arabia likely pre-positioning assets pending clarity on US-Iran framework. **Disconfirmation trigger:** Trump announces unilateral resumption of Project Freedom within 96 hours; Iran rejects Rubio's proposal publicly, triggering US reversion to solo enforcement.

PART 4 — TRUTH QUALITY CHECK (TQL) — AI-006 MANDATORY

Part 4 — Truth Quality Check (TQL) #### Item 1: Key Assumption [INFERENCE] The 85% Hormuz sustainability estimate assumes Tehran views corridor preservation as existentially preferable to kinetic closure. This rests on Iran's oil export dependency (~1.5M bpd) and fear of permanent Western naval presence. If Supreme Leader Khamenei or IRGC Commander Salami reframe Hormuz closure as reversible leverage rather than economic suicide, the assumption collapses. #### Item 2: Fragile Fact [FACT / INFERENCE HYBRID] Current multilateral commitment estimates (70-85%) trace to generic patrol pledges by U.S., UK, and France, not published force orders. No May 2026 feed evidence confirms active destroyer counts, ROE clarity, or GCC host-nation basing. One administrative delay in Bahrain or Djibouti could render "committed" assets non-operational within 72 hours. #### Item 3: High-Impact Uncertainty [INFERENCE] The 9-24% IRGC escalation band cannot distinguish between Salami's rhetorical posturing and Khamenei's redline enforcement. If Tehran decides one "demonstrative" strike on a U.S. logistics vessel would deter coalition expansion without triggering full retaliation, kinetic probability jumps to 60%+. No current intelligence clarifies this internal decision threshold. #### Item 4: Tier 4 Dependency Test [INFERENCE] Hypothesis H-B1 stability depends on Chinese and Indian crude demand remaining inelastic through Q3 2026, sustaining Tehran's export revenue. If Beijing redirects purchases to Yanbu or Russia by July, Iran loses economic rationale for corridor cooperation, potentially flipping IRGC calculus toward closure within 30 days.

PART 5 — DISCONFIRMATION

CONFIRMS

CONTRADICTS

■ IAEA confirms uranium transfer to third-country custody	■ Atomic Energy Organization of Iran publicly rejects export
■ Memo signed but uranium provision absent or deferred indefinitely	■ Russia or China named as third-party custodian

[INFERENCE] The most volatile threshold is "memo signed but uranium provision absent or deferred indefinitely"—closest to being triggered if Trump and Pezeshkian finalize a framework in May 2026 that prioritizes sanctions relief and regional talks while relegating enriched-uranium export to "future technical discussions." [INFERENCE] Such language would collapse H-B1 to 5–12% and pivot probability mass toward H-B3 (sanctions-only deal, no nuclear transfer). [FACT / INFERENCE HYBRID] Iran's Atomic Energy Organization has historically resisted permanent material export under Khamenei's "no capitulation" doctrine, making explicit public rejection by AEOI leadership the highest-impact disconfirmation event—it would definitively kill H-B1 and lock in H-B3 dominance. [INFERENCE] Conversely, naming Russia or China as custodian—plausible given Beijing's mediation role in the Saudi-Iran détente—would validate third-party logistics and lift H-B1 to 35–50%, though no current May 2026 feed evidence supports this.

PART 6 — FORWARD FLAG

FLAG 009 · PRED-01-B

Iranian uranium stockpile shipped out of country

Gate note: Window: Before 5 Jun 2026 | Status: OPENED Ed01

FLAG 009 · PRED-01-C

Lebanon ceasefire holds through 14 May extension

Gate note: Window: Before 14 May 2026 | Status: OPENED Ed01

MONITORING NOTE — Edition 009 Forward Flags [INFERENCE] Four live windows converge in the next 30 days. PRED-01-C (Lebanon ceasefire extension) closes 14 May; watch IDF northern command statements and any Hezbollah cross-border incidents near Kfar Giladi or Metula. [INFERENCE] PRED-01-D (Trump-Xi summit Iran reference) closes 16 May; monitor Beijing diplomatic calendar and State Department travel advisories. [INFERENCE] For PRED-01-B and PRED-01-E (uranium shipment, IRGC endorsement of Araghchi), track AEOI and SNSC public communiqués through early June. [INFERENCE] Prioritise: Netanyahu cabinet statements on Lebanon, Trump-Xi summit readouts, Salami or Ghalibaf comments on Araghchi's diplomacy, IAEA shipment reporting.

Part 1 — Fact Table: Lebanon-Israel Ceasefire Durability ## Current Operational Status **[FACT]** The IDF stated on May 11, 2026, that Hezbollah launched several rockets and explosive drones at Israeli troops in southern Lebanon. (Source: IDF official statements, Tier 1 | Confidence: HIGH) **[INFERENCE]** Israel carried out its first airstrike in Beirut since the ceasefire on May 6, 2026. (Source: Carry-forward from previous sweep | Confidence: HIGH) **[FACT]** NBC News reported on May 11, 2026, that Trump stated the ceasefire with Iran is "on massive life support." (Source: NBC News live updates, Tier 2 | Confidence: HIGH) **[INFERENCE]** Al Jazeera reported on May 11, 2026, that Israel is pushing for hangings and "show trials" for October 7 detainees. (Source: Al Jazeera, Tier 2 | Confidence: MEDIUM-HIGH) ## Diplomatic Posture **[FACT]** Iranian state television reported on May 10, 2026, that Tehran rejected the US proposal. (Source: Named government spokesperson statements, Tier 1 | Confidence: HIGH) **[FACT]** Tasnim News Agency reported that Tehran rejected a US proposal as "surrender" and demanded war reparations by the US, full Iranian sovereignty over the Strait of Hormuz, an end to sanctions, and release of seized Iranian assets. (Source: Tasnim News Agency, Tier 3 | Confidence: MEDIUM) **[FACT]** CBS News published a full transcript of a 60 Minutes interview with Israeli Prime Minister Benjamin Netanyahu on May 10, 2026. (Source: CBS News live updates, Tier 2 | Confidence: HIGH) ## Regional Context **[FACT]** U.S. Central Command announced on May 11, 2026, that 61 commercial vessels have been redirected by the U.S. blockade against Iran. (Source: CENTCOM public affairs, Tier 1 | Confidence: HIGH) **[FACT / INFERENCE HYBRID]** The concurrent IDF operations in southern Lebanon, Trump's characterization of the Iran ceasefire as failing, and ongoing Hezbollah attacks suggest the Lebanon-Israel ceasefire is under severe strain as of May 11, 2026.

PART 2 — INCONGRUITY ANALYSIS

Part 2 — Incongruity Analysis ## Case C: Lebanon-Israel Ceasefire Durability **[INFERENCE]** The Lebanon ceasefire framework exhibits the largest internal tension in the case set: H-C2 (framework persists without operational impact, IDF expands) at 65-71% directly contradicts H-C1 (framework leads to operational pause) at 0-13%. This is **H4 primary** — narrative-outcome gap. The ceasefire vocabulary continues in diplomatic channels while IDF operations in southern Lebanon proceed without constraint. **[FACT / INFERENCE HYBRID]** Reports from feed sweep indicate persistent IDF activity south of the Litani and sporadic Hezbollah fire, yet no party has formally withdrawn from the framework established in late 2024. **[INFERENCE]** This suggests both sides treat the ceasefire as optionality rather than obligation — Israel uses it to manage international pressure, Hezbollah uses it to justify operational restraint while preserving escalation capacity. **[INFERENCE]** **H6 secondary** applies: the suppressed intersection is *UNIFIL presence*. The framework assumes UNIFIL mediates compliance, yet current feed findings show no UNIFIL-verified withdrawal timeline or enforcement mechanism. If UNIFIL completes withdrawal (disconfirmation threshold), H-C2 probability would rise sharply. **[INFERENCE]** **H2 tertiary** (timing misalignment) is visible in the 60+ day war count: the ceasefire was designed for a different tempo. The framework aged past its structural assumptions without renegotiation. **[INFERENCE]** **PMM-001 lesson applies**: avoid treating diplomatic statements as predictions without examining bilateral incentives. Israel's incentive structure favors H-C2 (expand under framework cover); Hezbollah's favors H-C3 (escalate if expansion becomes intolerable). Neither currently favors H-C1. **Dominant heuristic: H4 (narrative-outcome gap). H6 (suppressed intersection — UNIFIL). H2 (timing decay).**

[INFERENCE] The Lebanon-Israel ceasefire case draws from 18 sources with balanced tier distribution (5/7/4), providing adequate geographic and institutional diversity across Israeli, Lebanese, and international outlets.

[INFERENCE] Gate 0.2 compliance appears robust with minimal cluster risk given mix of defense, diplomatic, and regional reporting channels. [INFERENCE] However, limited independent Lebanese civil society voices and heavy reliance on state-affiliated sources in both Israel and Lebanon may create echo-chamber effects on ceasefire implementation claims. Overall assessment: MEDIUM confidence in source base.

PART 3 — HYPOTHESIS SET

H-C1: Ceasefire → operational pause 0-13% (pt: 0.03)	H-C2: Framework without impact 65-71% (pt: 0.69)	H-C3: Hezbollah escalation / collapse 41-56% (pt: 0.50)
Bayesian: Tier 1: IDF reports Hezbollah launched r. Prop: H-A1 Δ =-0.185 → H-A3 -0.030. Net +0.018	Bayesian: Tier 1: IDF operations continue against . Prop: H-A1 Δ =-0.185 → H-A3 -0.030. Net +0.092	Prop: H-A1 Δ =-0.185 → H-A3 -0.030

Part 3: Hypothesis Set — Case C (Lebanon Ceasefire Dynamics) ## **H-C1: Lebanon ceasefire framework leads to operational pause Probability Range: 0–13% (point estimate: 3%)** [FACT] The IDF conducted its first airstrike in Beirut since the ceasefire on May 6, 2026, targeting a Hezbollah commander, according to feed reporting. [FACT / INFERENCE HYBRID] IDF sources report Hezbollah launched rockets during the same 48-hour window. [INFERENCE] These kinetic exchanges directly contradict operational pause conditions. [INFERENCE] The hypothesis remains suppressed by the absence of any verifiable stand-down order from either the IDF Southern or Northern Commands or Hezbollah's Jihad Council. **Disconfirmation trigger:** Verified IDF withdrawal from positions north of the Litani River within 72 hours, or named UNIFIL source confirming cessation of Israeli overflights. ## **H-C2: Framework without operational impact / IDF expansion Probability Range: 65–71% (point estimate: 69%)** [FACT] Israel executed airstrikes in Beirut on May 6, 2026, despite ceasefire framework discussions, per feed reports. [FACT / INFERENCE HYBRID] IDF operations against Hezbollah targets continued throughout the 48-hour observation period. [INFERENCE] The framework exists on paper but imposes no constraint on Israeli tactical freedom of action. [INFERENCE] Trump's May 6 statement on "very good talks" with Iran made no reference to Lebanon-specific de-escalation commitments. [FACT / INFERENCE HYBRID] The absence of any Trump administration official linking Iran diplomacy to Hezbollah restraint suggests decoupled negotiation tracks. **Disconfirmation trigger:** Named IDF spokesman announces 48-hour suspension of southern Lebanon air operations. ## **H-C3: Hezbollah escalation / framework collapse Probability Range: 41–56% (point estimate: 50%)** [FACT] Hezbollah launched rockets at Israeli territory within the last 48 hours, per IDF reporting cited in the feed sweep. [FACT / INFERENCE HYBRID] Israel responded with the May 6 Beirut airstrike targeting a named Hezbollah commander. [INFERENCE] This tit-for-tat sequence indicates the framework has not altered Hezbollah's operational decision-making. [INFERENCE] The hypothesis sits near equipoise because no large-scale Hezbollah rocket salvo (100+ rockets in single barrage) has yet occurred, which would unambiguously signal collapse. **Disconfirmation trigger:** Hezbollah's Jihad Council issues formal stand-down order through Al-Manar media, or Trump announces framework includes named Hezbollah compliance verification mechanism.

PART 4 — TRUTH QUALITY CHECK (TQL) — AI-006 MANDATORY

Part 4 — Truth Quality Check (TQL) **Item 1: Key Assumption** [INFERENCE] The durability assessment presumes Netanyahu's cabinet accepts ceasefire enforcement constraints despite limited coalition appetite for withdrawal. If domestic pressure (settler lobby, Ben-Gvir faction) overrides external guarantees, IDF ground presence in southern Lebanon persists regardless of framework text, rendering operational pause scenarios (H-C1: 0-13%) structurally non-viable. **Item 2: Fragile Fact** [FACT / INFERENCE HYBRID] Current strike tempo in southern Lebanon exceeds December 2024 baseline, yet no verified withdrawal timeline has emerged from Jerusalem or Beirut since framework announcement. Any ceasefire "implementation" claim lacking named Israeli or Lebanese military liaison officers, published grid coordinates, or UNIFIL verification protocols remains rhetorical rather than operational. **Item 3: High-Impact Uncertainty** [INFERENCE] Hezbollah's command coherence post-leadership decapitation determines escalation probability (H-C3: 41-56%). If mid-tier commanders in Tyre or Nabatieh prioritize tactical revenge over strategic restraint—absent clear successor to martyred leadership—localized rocket salvos could trigger Israeli retaliation cycles that collapse framework irrespective of Beirut's diplomatic intent. **Item 4: Tier 4 Dependency Test** [INFERENCE] Framework collapse probability hinges on whether Trump administration applies coercive leverage on Netanyahu (arms shipment conditioning, UN abstention threats) or provides diplomatic cover for sustained operations. If Washington signals tolerance for "security buffer" expansion, H-C2 (65-71% framework without pause) becomes dominant regardless of Lebanese government commitments or international monitoring proposals.

PART 5 — DISCONFIRMATION

CONFIRMS	CONTRADICTS
----------	-------------

■ Ceasefire extended formally beyond 14 May with Hezbollah quiet response	■ IDF crosses Litani in major operation OR Hezbollah barrage 100+ rockets
■ Lebanese government publicly withdraws from talks OR Aoun resigns	■ UNIFIL withdrawal completed

Disconfirmation Landscape: Case C [INFERENCE] The ceasefire extension threshold (14 May) stands closest to activation, with Trump administration pressure on Netanyahu and Hezbollah's calculated restraint creating momentum toward formal prolongation. [FACT / INFERENCE HYBRID] Recent feed findings show no IDF plans for major Litani crossings and Hezbollah rocket counts remain well below 100 daily, keeping the Gate 0.6 breach distant. [INFERENCE] However, the largest *impact* threshold would be Lebanese government withdrawal or Aoun's resignation—this would collapse the diplomatic architecture entirely, sending H-C1 to 5-15% and eliminating the negotiated pathway. [INFERENCE] Current feed evidence shows Aoun remains engaged despite domestic criticism, but his political capital is finite. [INFERENCE] UNIFIL withdrawal, if completed, would destroy monitoring capacity and push H-C2 (unmonitored drift) upward sharply, though no concrete withdrawal timeline has emerged in current reporting.

PART 6 — FORWARD FLAG

FLAG 009 · PRED-01-B

Iranian uranium stockpile shipped out of country

Gate note: Window: Before 5 Jun 2026 | Status: OPENED Ed01

FLAG 009 · PRED-01-C

Lebanon ceasefire holds through 14 May extension

Gate note: Window: Before 14 May 2026 | Status: OPENED Ed01

Edition 009 Monitoring Note: Case C Forward Flags [INFERENCE] With PRED-01-C's 14 May extension deadline now passed, prioritise Lebanon ceasefire integrity monitoring through IDF Northern Command statements and Hezbollah media wing outputs. [INFERENCE] Track whether Netanyahu cabinet extends or abandons the framework ahead of June litigation deadlines. [INFERENCE] For PRED-01-D (Beijing summit, closes 16 May), monitor Xinhua, White House readouts, and Iranian MFA channels for any Trump-Xi-Araghchi triangulation language before window closure. [INFERENCE] PRED-01-B (uranium shipment, closes 5 June) requires IAEA Vienna watch and Atomic Energy Organization of Iran official statements. [INFERENCE] PRED-01-E (IRGC endorsement, closes 5 June) demands daily scanning of SNSC, Khamenei office, and IRGC Political Bureau outputs for Araghchi-aligned rhetoric shifts.

CASE D	Trump-Xi Beijing Summit (Iran framing)	DEVELOPING	MEDIUM 55–70%
--------	--	------------	------------------

PART 1 — FACT TABLE

FACT	SOURCE — TIER · GATE 0

Iranian sovereignty over the Strait of Hormuz, an end to sanctions, and release of seized Iranian assets, according to Tasnim News Agency on May 10, 2	Tasnim News Agency (IRGC-linked) Tier 3

Part 1 — Fact Table, Case D: Trump-Xi Beijing Summit (Iran framing) **[FACT]** President Trump posted on Truth Social on May 10, 2026, characterizing the Iran ceasefire as "on massive life support," according to Trump Truth Social / White House official statements (Tier 1) and corroborated by NBC News live updates (Tier 2). Gate 0.4 confidence: HIGH. This marks a significant deterioration from Trump's May 6 statement claiming "very good talks" with Iran. **[FACT]** Iranian state television reported on May 10, 2026, that Tehran rejected the latest US proposal, characterizing it as "surrender," according to Named government spokesperson statements (Tier 1) and Tasnim News Agency (Tier 3). Gate 0.4 confidence: HIGH. Iran's rejection demands include war reparations from the United States, full Iranian sovereignty over the Strait of Hormuz, an end to sanctions, and release of seized Iranian assets. **[FACT]** U.S. Central Command announced on May 11, 2026, that 61 commercial vessels have been redirected by the US blockade against Iran, with four commercial vessels disabled, according to CENTCOM public affairs (Tier 1). Gate 0.4 confidence: HIGH. This represents active enforcement of maritime interdiction operations in the Gulf region. **[FACT / INFERENCE HYBRID]** The IDF stated on May 11, 2026, that Hezbollah launched several rockets and explosive drones at Israeli troops in southern Lebanon, according to IDF official statements (Tier 1). Gate 0.4 confidence: HIGH. This indicates continued low-intensity conflict along the Israeli-Lebanese border despite ceasefire frameworks. **[FACT / INFERENCE HYBRID]** Iran's Atomic Energy Organization chief Eslami stated on May 11, 2026, that enrichment capability is "not up for negotiations," according to Mehr News Agency (Tier 3). Gate 0.4 confidence: MEDIUM-HIGH. This represents a hardline position on nuclear program elements during ongoing diplomatic exchanges. The factual record indicates significant diplomatic deterioration between May 6-11, 2026, with both parties adopting increasingly rigid positions as Trump prepares for the Beijing summit with Xi Jinping.

PART 2 — INCONGRUITY ANALYSIS

Part 2 — Incongruity Analysis: Case D (Trump-Xi Beijing Summit, Iran framing) **[INFERENCE]** The dominant tension is **H3 (beneficiary asymmetry)**: Beijing holds structural leverage over both Washington and Tehran, but summit optics favor U.S. narrative control while China extracts tangible concessions elsewhere. **[FACT / INFERENCE HYBRID]** Trump announced the Beijing summit for mid-May 2026; no joint communiqué has yet addressed Iran sanctions architecture or the 30 April memo framework, leaving the incentive structure for Chinese endorsement unclear. **[INFERENCE]** **H6 (suppressed intersection)** operates as secondary driver: the summit agenda likely bundles tariffs, Taiwan posture, and Gulf security, but public framing will isolate Iran as a bilateral U.S.-Iran matter to avoid signaling Chinese veto interest at the UNSC. **[INFERENCE]** This suppression protects Trump's domestic messaging (claiming Xi defers to U.S. leadership) while allowing Beijing to quietly condition any Iran statement on trade or semiconductor concessions—an asymmetry that benefits China more than Washington. **[INFERENCE]** **H1 (incentive misalignment)** tertiary: Trump seeks a diplomatic trophy; Xi seeks to avoid looking subservient while maximizing economic leverage. **[INFERENCE]** PMM-001 caution applies: absent evidence of bilateral incentive convergence (e.g., tariff rollback tied to Iran statement), declaring high confidence in Chinese public endorsement repeats the named-source prediction error without matching structural analysis. **[INFERENCE]** Disconfirmation threshold **not yet triggered**: the summit has not been deferred past 16 May, and no Chinese opposition has surfaced. **[INFERENCE]** However, the absence of a joint statement draft or leaked negotiation minutes by 10 May would elevate H6 salience and lower H-D1 confidence, signaling that Iran remains a suppressed rather than resolved agenda item. **Dominant heuristic: H3 (beneficiary asymmetry). H6 (suppressed intersection) secondary. H1 (incentive misalignment) tertiary.**

****Domain Quality Assessment: Case D (Trump-Xi Beijing Summit, Iran Framing)**** [FACT / INFERENCE hybrid] Source base shows moderate diversity with 5 Tier 1 anchors (likely US/Chinese official channels), 7 Tier 2 regionals, and 4 Tier 3 feeds. [INFERENCE] Independent verification across 18 sources reduces single-source contamination risk, though cluster effects around official Trump-Xi narratives may constrain analytical variance. [INFERENCE] Gate 0.2 compliance appears adequate given geographic and editorial spread, though Iran-framing specificity may narrow perspective breadth. [INFERENCE] Cross-domain correlation with Case A (Iran leadership splits) strengthens inferential grounding. ****Overall assessment: MEDIUM confidence in source base.****

PART 3 — HYPOTHESIS SET

H-D1: GL U renewed 10-22% (pt: 0.12)	H-D2: GL U lapsed (confirmed) 72-85% (pt: 0.85)	H-D3: Wind-down instrument issued 20-35% (pt: 0.32)
Prop: H-A1 Δ =-0.185 → H-A3 -0.030	Bayesian: Tier 3: House of Saud reports Russian FM. Prop: H-A1 Δ =-0.185 → H-A3 -0.030. Net +0.016	Prop: H-A1 Δ =-0.185 → H-A3 -0.030

Part 3 — Hypothesis Set ## H-D1: "Gentleman's understanding renewed" (10–22%, pt=12%) [INFERENCE] The narrow band reflects scant evidence of tacit channel renewal. [FACT] Trump stated May 6 that the US has had "very good talks" with Iran and paused "Project Freedom" convoy escorts through Hormuz the same day (CBS, Al Jazeera). [FACT / INFERENCE HYBRID] Yet Iran launched cruise missiles and drones at US vessels days earlier (wire reports), and Israel struck Beirut May 6 for the first time since the ceasefire, signaling kinetic drift rather than restraint. [INFERENCE] The probability rises materially if Rubio or Trump explicitly reference a tacit pause arrangement within 72 hours; it collapses if Iran resumes Hormuz interdiction or the US reactivates Freedom convoys without Iranian protest moderation. ## H-D2: "Gentleman's understanding lapsed (confirmed)" (72–85%, pt=85%) [FACT] Russian FM channels via House of Saud indicate no active backroom pause exists (Tier 3 attribution). [FACT / INFERENCE HYBRID] Iran fired missiles at US warships; the US paused Hormuz escorts May 6 but framed the halt as operational reassessment, not diplomatic coordination (CBS, Bloomberg context). [INFERENCE] The 85% point estimate reflects high confidence that no gentleman's channel survived the Hormuz kinetic exchange. [INFERENCE] Disconfirmation requires either explicit mutual restraint language from Tehran and Washington within 48 hours, or verifiable evidence that the May 6 pause was negotiated in advance rather than reactive. Absent that, the lapse is operationally confirmed. ## H-D3: "Wind-down instrument issued retroactively" (20–35%, pt=32%) [INFERENCE] The range captures modest chances that Trump or Araghchi invoke a prior tacit agreement to justify recent restraint gestures. [FACT / INFERENCE HYBRID] Trump's May 6 Hormuz pause and his statement that talks are "very good" offer thin narrative scaffolding (Al Jazeera, CBS). [INFERENCE] Yet Iran's missile volleys at US vessels and Israel's Beirut strike occurred without claims of breach from either Washington or Tehran, suggesting no binding instrument exists. [INFERENCE] The probability climbs sharply if either capital references a "temporary understanding" or "provisional arrangement" in the next 72 hours to rationalize recent moves; it falls below 15% if seven days pass with continued kinetic friction and no such invocation.

PART 4 — TRUTH QUALITY CHECK (TQL) — AI-006 MANDATORY

Part 4 — Truth Quality Check (TQL) ## Case D: Trump-Xi Beijing Summit (Iran framing) ### Item 1: Key Assumption [INFERENCE] We assume Trump's May Beijing trip addressed Iran sanctions architecture and that Xi proposed GL U renewal as a trade-off for tariff relief. No current feed evidence confirms Beijing agenda details; if Iran was not discussed, H-D1 and H-D3 probabilities collapse toward zero. Assumption relies entirely on strategic plausibility, not documented fact. ### Item 2: Fragile Fact [FACT / INFERENCE HYBRID] Treasury's April 23 Iran-specific GL expires May 23; no renewal notice has appeared in Federal Register or FinCEN feeds through current sweep. [INFERENCE] If Treasury issues a retroactive 72-hour extension notice before May 25, H-D3 jumps from 32% to 65%; absence after May 25 confirms H-D2 at 95%+. ### Item 3: High-Impact Uncertainty [INFERENCE] We do not know whether Trump conditioned Beijing semiconductor cooperation on China halting Iran oil purchases via shadow fleets. If such linkage exists and Xi agreed, H-D2 probability rises to 90%+; if Xi refused linkage, H-D1 scenario (quiet renewal without disclosure) becomes viable at 25-30%, reshaping sanction enforcement assumptions through July. ### Item 4: Tier 4 Dependency Test [INFERENCE] Case D probabilities depend on unobserved Treasury-State coordination and Beijing's Iran policy shift signals. If Araghchi visits Beijing before June 5 and secures public Xi meeting, H-D1 revives to 30%; if no visit occurs and Hormuz transit data shows Chinese offtake declining 15%+ week-over-week, H-D2 locks at 92%, confirming sanctions enforcement hardening.

PART 5 — DISCONFIRMATION

CONFIRMS	CONTRADICTS
■ Joint Trump-Xi statement explicitly endorses US-Iran framework	■ China publicly opposes framework OR signals UNSC veto

■ Summit deferred past 16 May without rescheduling

■ Beijing offers economic guarantee for Iran post-memo

[INFERENCE] The "Summit deferred past 16 May without rescheduling" threshold poses the greatest immediate trigger risk and would carry the largest analytical impact. [INFERENCE] With the current date in early May 2026 and no confirmed Trump-Xi summit announcement in recent feeds, the 11-day window is closing rapidly. [INFERENCE] Deferral without rescheduling would contradict PRED-01-D outright, collapsing H-D1 (Trump-Xi coordination enabling Iran framework) and elevating H-D3 (US-China competition blocking resolution) to dominance. [INFERENCE] This shift would reframe the entire Case D probability architecture, as Beijing's silence or postponement signals unwillingness to publicly endorse Washington's Iran diplomacy. [INFERENCE] No other threshold—neither explicit Chinese veto statements nor economic guarantees for Tehran—currently shows comparable proximity or structural consequence. [INFERENCE] Trump and Xi's scheduling decisions in the next ten days will determine whether Case D remains viable or collapses into strategic competition dynamics.

PART 6 — FORWARD FLAG

FLAG 009 · PRED-01-A

Iran-US framework memo signed within 30 days

Gate note: Window: Before 5 Jun 2026 | Status: OPENED Ed01

FLAG 009 · PRED-01-B

Iranian uranium stockpile shipped out of country

Gate note: Window: Before 5 Jun 2026 | Status: OPENED Ed01

Case D Monitoring Note — Edition 009 [INFERENCE] With five active predictions spanning three distinct theatres (Iran-US direct, Lebanon ceasefire, China mediation), Edition 010 must prioritise three surveillance streams. [INFERENCE] First: Watch for IRGC/SNSC public statements before 5 June that either endorse or contradict Araghchi's diplomatic line—Salami and Khamenei remarks are critical. [INFERENCE] Second: Monitor Lebanon border incidents and IDF-Hezbollah tactical friction ahead of the 14 May ceasefire extension deadline. [INFERENCE] Third: Track Beijing diplomatic traffic before the 16 May Trump-Xi summit for any Iran framework preview. [INFERENCE] All five predictions converge on late May; granular actor-level signals (Pezeshkian cabinet moves, Ghalibaf statements, Netanyahu security cabinet leaks) will determine whether momentum holds or fragments.

CASE E	IRGC/SNSC Constraint on Diplomatic Track	WATCH	MEDIUM 55–70%
--------	--	-------	------------------

PART 1 — FACT TABLE

Hormuz navigation to its pre-late-February conditio	House of Saud / Conflict Pulse Tier 3

Part 1 — Fact Table, Case E: IRGC/SNSC Constraint on Diplomatic Track **[FACT / INFERENCE HYBRID]** Iranian state television reported on May 10, 2026, that Tehran rejected the U.S. proposal as "surrender" and demanded war reparations, full Iranian sovereignty over the Strait of Hormuz, an end to sanctions, and release of seized Iranian assets. Source: Named government spokesperson statements (Tier 1) and Tasnim News Agency (Tier 3). Gate 0.4 confidence: HIGH. The dual-sourcing across state television and IRGC-linked outlets indicates coordinated messaging from hardline factions. **[FACT]** President Trump stated on Truth Social on May 10, 2026, that the ceasefire with Iran is "on massive life support" after rejecting the Iranian proposal. Source: Trump Truth Social / White House official statements (Tier 1) and NBC News live updates (Tier 2). Gate 0.4 confidence: HIGH. Direct presidential attribution via official channels confirms the collapse of the diplomatic track as of mid-May 2026. **[FACT]** Mohammad Eslami, head of the Atomic Energy Organization of Iran, stated on May 11, 2026, that enrichment capability is "not up for negotiations." Source: Mehr News Agency (Tier 3). Gate 0.4 confidence: MEDIUM-HIGH. This statement, consistent with Supreme Leader guidance on nuclear sovereignty, reflects hardline positioning within the Iranian establishment. **[FACT]** AP reported on May 11, 2026, that Iran and the United States were "at an impasse again Monday over how to end their war." Source: AP (Tier 2). Gate 0.4 confidence: HIGH. Wire service confirmation of diplomatic breakdown corroborates White House and Iranian state media narratives. **[FACT / INFERENCE HYBRID]** The timing and substance of Tehran's rejection—demanding reparations, Hormuz sovereignty, and asset release—suggests IRGC/SNSC coordination to foreclose Trump's proposal before any negotiation could advance. The enrichment red line articulated by Eslami on May 11 reinforces this constraint pattern. Gate 0.4 confidence: MEDIUM-HIGH.

PART 2 — INCONGRUITY ANALYSIS

Part 2 — Incongruity Analysis: Case E (IRGC/SNSC Constraint on Diplomatic Track) **[INFERENCE] H6 (Suppressed Intersection) dominates this case:** the public Araghchi–Rubio diplomatic track proceeds visibly (Oman memo, Chinese mediation talk, Pakistan reciprocal release) while IRGC operational posture—evidenced by Salami's May 8 Qaleh Ganj remarks, continued Hormuz navigation enforcement, and the Yanbu/Petroline targeting infrastructure established in late April—remains unmodulated. The Yanbu/Petroline case (H-E2 at 81%) intersects the ceasefire case (H-C2 at 87%); the US carrier presence case (H-D2 at 80%) intersects Hormuz tolling/blockade continuation (H-B4 at 82%); yet no single feed finding shows SNSC–IRGC alignment on operational de-escalation. **[FACT / INFERENCE HYBRID]** Salami's May 8 speech referenced "decisive defence of our maritime rights" without acknowledging Araghchi's parallel diplomacy, suggesting institutional non-synchronization rather than deliberate contradiction—**H3 (Beneficiary Asymmetry)** applies because Araghchi gains international credibility from the Oman memo structure, while IRGC preserves tactical leverage through unannounced readiness. **[INFERENCE] H1 (Incentive)** tertiary: no current feed evidence shows Trump applying punitive pressure on Iran's diplomatic track (unlike February sanctions escalation). Absent coercion, Araghchi's incentive to pre-announce IRGC operational stand-down weakens. **Disconfirmation watch:** Khamenei endorsement of Araghchi posture would collapse H-E2/H-E3; Salami contradiction of Foreign Ministry on Hormuz would elevate H-E3 to 70%+. Neither threshold approached in current feed sweep. **PMM lesson application:** PMM-003 warns against over-weighting Iranian-source confidence when Tier 1 denial (IRGC silence on Yanbu stand-down) remains active; H-E2 at 81% respects this by pricing continued strike probability high despite diplomatic visibility. **Dominant heuristic:** H6 (Suppressed Intersection). H3 (Beneficiary Asymmetry) secondary. H1 (Incentive) tertiary.

****Case E Domain Quality Assessment**** [INFERENCE] Source base shows adequate tier distribution (5/7/4) across 18 feeds, but likely exhibits significant cluster risk given Iran hardliner coverage patterns. [FACT / INFERENCE hybrid] Tier 1 presence suggests direct IRGC/SNSC statements exist, though independence between Revolutionary Guard-aligned outlets remains questionable. [INFERENCE] Gate 0.2 compliance probable for factual hardliner positioning, but interpretive claims about internal constraint mechanisms may lack triangulation. Overall assessment: ****MEDIUM confidence**** in source base.

PART 3 — HYPOTHESIS SET

H-E1: No further Yanbu strike 68-77% (pt: 0.74)	H-E2: Further Yanbu/Petroline strike 71-86% (pt: 0.81)	H-E3: Displaced response via proxy 51-64% (pt: 0.59)
Bayesian: Tier 3: Mehr News reports Araghchi-bin F. Prop: H-A1 $\Delta=-0.185 \rightarrow$ H-A3 -0.030 ; H-E1 $\Delta=+0.054 \rightarrow$ H-A1 $+0.030$. Net $+0.054$	Bayesian: Tier 1: Iran state TV via Tasnim reports. Prop: H-A1 $\Delta=-0.185 \rightarrow$ H-A3 -0.030 ; H-E1 $\Delta=+0.054 \rightarrow$ H-A1 $+0.030$. Net $+0.071$	Prop: H-A1 $\Delta=-0.185 \rightarrow$ H-A3 -0.030 ; H-E1 $\Delta=+0.054 \rightarrow$ H-A1 $+0.030$

Part 3 — Hypothesis Set (Case E: Saudi Retaliation / IRGC Counter-Response) ## H-E1: No further IRGC Yanbu/Petroline strike **Range 68–77% (point estimate 74%)** [FACT / INFERENCE HYBRID] Mehr News reports Araghchi met Saudi Foreign Minister bin Farhan on May 6, 2026. [INFERENCE] This direct channel reduces immediate escalation incentive. [FACT] Trump stated May 6 he has had "very good talks" with Iran over 24 hours, per Al Jazeera. [INFERENCE] Active US-Iran dialogue diminishes IRGC strike authorization against US-aligned Gulf infrastructure. [FACT] Trump paused "Project Freedom" Hormuz convoy operations May 6, per CBS. [INFERENCE] Reduced US naval footprint lowers IRGC targeting opportunity cost. **Disconfirmation trigger:** Saudi airstrike on Iranian mainland port or refinery; confirmed IRGC Quds Force deployment to Yanbu vicinity; formal SNSC communiqué authorizing "deterrent infrastructure punishment" in Gulf states. ## H-E2: Further IRGC strike on Yanbu/Petroline **Range 71–86% (point estimate 81%)** [FACT] Iran state TV via Tasnim reports IRGC fired missiles at US Navy warship, per carry-forward summary. [INFERENCE] Demonstrated willingness to target US assets in Gulf raises parallel risk to Saudi energy infrastructure if Riyadh supports Israeli operations or hosts US refueling. [FACT] IDF conducted first Beirut airstrike since ceasefire May 6, 2026, targeting Hezbollah commander, per IDF/Lebanon summary. [INFERENCE] Renewed Israeli kinetic action creates permissive environment for IRGC "tit-for-tat" targeting of Saudi economic nodes. **Disconfirmation trigger:** Araghchi-bin Farhan joint statement on Gulf de-escalation; IRGC Commander Salami public order suspending "asymmetric Gulf operations"; confirmed Trump-Pezeshkian phone call with infrastructure immunity clause. ## H-E3: IRGC displaced response via USN proxy or Red Sea/Gulf **Range 51–64% (point estimate 59%)** [FACT] IRGC launched cruise missiles, drones, and weaponized small boats against vessels, per Iranian claims summary. [INFERENCE] Diversified maritime toolkit enables low-attribution strikes on commercial or coalition naval targets as substitute for direct Yanbu strike. [FACT] Trump paused Hormuz convoy mission May 6, per CBS. [INFERENCE] Reduced US forward presence lowers immediate USN target density but does not eliminate Red Sea or Bab el-Mandeb options. [INFERENCE] If Araghchi-bin Farhan diplomacy (Mehr News, May 6) constrains direct Saudi targeting, IRGC may redirect to Houthi-coordinated Red Sea harassment or Gulf tanker interdiction. **Disconfirmation trigger:** US Fifth Fleet surge order to Bahrain; confirmed IRGC stand-down from Khamenei office; Houthi ceasefire announcement brokered by Oman.

PART 4 — TRUTH QUALITY CHECK (TQL) — AI-006 MANDATORY

Part 4 — Truth Quality Check (TQL) ## Case E: IRGC/SNSC Constraint on Diplomatic Track ### 1. Key Assumption (40–60 words) [INFERENCE] We assume Khamenei's January directive constraining Salami and IRGC escalation remains binding through May 2026, despite Netanyahu's Kfar Giladi strikes and Trump's public threats. If Khamenei reverses that directive—or if IRGC acts autonomously—the entire diplomatic track collapses. No current feed evidence confirms directive remains intact or revoked. ### 2. Fragile Fact (40–60 words) [FACT / INFERENCE HYBRID] Yanbu and Petroline refineries remain named IRGC targets per prior intelligence, but no feed reporting since mid-April 2026 confirms active targeting orders, missile redeployment, or strike preparation. Absence of fresh evidence creates fragile inferential weight: we extrapolate restraint from silence, yet operational preparations may be invisible to feed coverage. ### 3. High-Impact Uncertainty (40–60 words) [INFERENCE] If IRGC executes a displaced response—Houthi strikes on USN assets, mining Hormuz approaches, proxy action in Bab al-Mandab—without direct Iranian attribution, does Washington treat it as Iranian escalation triggering retaliation, or as deniable proxy action preserving diplomatic space? Trump's response threshold remains undefined and represents maximum forecast uncertainty. ### 4. Tier 4 Dependency Test (40–60 words) [INFERENCE] Case E probabilities depend entirely on Tier 3 Saudi-Pakistan-China diplomatic corridor success and Tier 2 Beijing leverage over Tehran. If Beijing fails to constrain IRGC or Sharif's mediation stalls by mid-May 2026, IRGC strike probability inverts: H-E2 collapses below 50%, H-E3 escalates above 75%. No feed evidence yet tests this dependency.

PART 5 — DISCONFIRMATION

CONFIRMS	CONTRADICTS
■ Khamenei or SNSC public statement endorsing Araghchi posture	■ Salami publicly contradicts Foreign Ministry on Hormuz / blockade-lift
■ IRGC announces new vessel seizures or expanded toll mechanism after memo signed	■ Jalili named as alternate Iranian negotiating lead

Disconfirmation Landscape: Case E [INFERENCE] The **Salami contradiction threshold** is closest to triggering. IRGC Navy Commander Tangsiri has already issued hardline statements on Hormuz control; a public rebuke of Araghchi's reported willingness to suspend interdiction would constitute a clear institutional split. [INFERENCE] The **IRGC vessel seizure threshold** would have the largest systemic impact — new captures after a diplomatic memo signing would represent operational defiance of Tehran's executive diplomacy, forcing Trump to choose between abandoning the deal or accepting Iranian bifurcation. [INFERENCE] Conversely, a **Khamenei endorsement** of Araghchi's posture remains the strongest confirmatory signal, but no current feed evidence suggests such a statement is imminent. [FACT / INFERENCE HYBRID] Jalili's appointment as alternate lead would indicate Supreme Leader skepticism without overt rejection, creating strategic ambiguity rather than clean disconfirmation.

PART 6 — FORWARD FLAG

FLAG 009 · PRED-01-A

Iran-US framework memo signed within 30 days

Gate note: Window: Before 5 Jun 2026 | Status: OPENED Ed01

FLAG 009 · PRED-01-B

Iranian uranium stockpile shipped out of country

Gate note: Window: Before 5 Jun 2026 | Status: OPENED Ed01

Case E Forward Monitoring Note – Edition 009 [INFERENCE] Priority one: Trump-Xi Beijing summit (13-16 May window) for any Iran-framework language in joint communiqué or presser remarks. [INFERENCE] Second: IRGC/SNSC public statements through 5 June deadline—watch Salami, Ghalibaf, or Supreme National Security Council readouts for explicit Araghchi endorsement or critique. [INFERENCE] Third: Lebanon ceasefire stress-testing through 14 May extension deadline—monitor northern border incidents, IAF strikes, and any Hezbollah rocket fire. [INFERENCE] Fourth: any shipping activity (Bandar Abbas, Natanz) or IAEA Board of Governors language suggesting uranium stockpile movement before 5 June. [INFERENCE] Fifth: US State Department or NSC readouts indicating framework memo proximity.

CRITICAL WINDOWS — ED010 PRIORITIES

CRITICAL WINDOWS – EDITION 009 **WINDOW 1: Lebanon Ceasefire Extension (Closes 14 May)** [FACT] The 60-day Lebanon ceasefire extension expires 14 May 2026, three days from publication. [INFERENCE] This is the most immediate binary test of the broader Iran-US framework hypothesis. If the ceasefire collapses before Thursday midnight, the entire diplomatic sequence loses structural credibility. [FACT] Israeli strikes on southern Lebanon perimeter villages continued through 10 May per multiple regional feeds. [INFERENCE] A collapse would immediately cascade pressure onto PRED-01-A (framework memo deadline 5 June) and signal that neither Tehran nor Washington commands sufficient control over proxies to sustain multi-stage de-escalation. Edition 010 mandatory action: Report pass/fail status explicitly. If failed, downgrade all framework predictions by minimum 15 percentage points. **WINDOW 2: Trump-Xi Summit (Closes 16 May)** [FACT] Trump arrives Beijing 15 May for bilateral summit with Xi Jinping. [INFERENCE] PRED-01-D requires a *public* Iran-framework reference in summit communiqué or press availability by 16 May. [INFERENCE] Absence of such reference would indicate China views Iran negotiations as premature or destabilising to its Gulf energy relationships, undermining the trilateral coordination pillar of the framework hypothesis. [FACT] No advance summit agenda details have leaked via State Department or Xinhua feeds as of 11 May. Edition 010 mandatory action: Obtain full summit readout. Score PRED-01-D immediately. Any China silence on Iran framework triggers reassessment of Beijing's willingness to backstop Hormuz guarantees. **WINDOW 3: Framework Memo Signature (Closes 5 June)** [FACT] PRED-01-A posits Iran-US framework memo signed by 5 June, now 25 days away. [INFERENCE] This window depends on successful passage of Windows 1 and 2. If Lebanon ceasefire fails or Beijing summit produces no Iran mention, the 5 June deadline becomes structurally unachievable. [FACT] No current feed evidence shows draft

text circulation, venue preparation, or named negotiator travel to neutral sites. [INFERENCE] The hypothesis relies on invisible Track 1.5 diplomacy that has not yet surfaced in OSINT streams. Edition 010 mandatory action: Scan for Omani, Qatari, or Swiss venue booking signals. Identify any Araghchi or US Special Envoy travel anomalies. If no positive indicators emerge by Edition 010, initiate formal probability downgrade review for PRED-01-A. **WINDOW 4: IRGC/SNSC Endorsement (Closes 5 June)** [FACT] PRED-01-E requires public IRGC or Supreme National Security Council endorsement of Araghchi's diplomatic posture by 5 June. [INFERENCE] This is the hardest window to observe directly, as Iranian internal consensus-building rarely leaks before fait accompli. [FACT] Khamenei has made no public Iran-policy statement since 3 May Mashhad speech per IRNA archives. [INFERENCE] IRGC silence is not evidence of opposition, but absence of endorsement twenty-five days before deadline increases risk that hardliners are withholding consent pending concrete US sanctions relief proof. Edition 010 mandatory action: Monitor Friday prayer sermons in Tehran, Qom, Mashhad for oblique Araghchi references. Track Salami and Ghalibaf meeting schedules. Any public IRGC criticism of Foreign Ministry before 5 June constitutes window failure.
