SIGNALGHOST STRATEGIC INTELLIGENCE BRIEF
EDITION 010 — EVENING SWEEP

1759 GMT 12 MAY 2026
War Day 74

EDITION	WAR DAY	APPROACHING DEADLINE	FI
010	74	PRED-01-C D-2	0.42

SIGNALGHOST EDITION 010 — EXECUTIVE SUMMARY (War Day 74) [FACT] Trump explicitly rejected Iran's ceasefire counterproposal as "TOTALLY UNACCEPTABLE," severing the primary diplomatic track. [FACT] Pakistan confirmed hosting Iranian military aircraft on its airfields, marking operational sanctuary provision by a nuclear-armed neighbor. [FACT] Iran's atomic chief Eslami declared enrichment capability non-negotiable, hardening nuclear red lines. [FACT] Iran claims Strait of Hormuz effective interdiction width now spans 200-300 nautical miles versus the strait's historic 20-30 mile chokepoint, signaling layered missile/drone denial zones. [FACT] Tehran filed formal complaint against US at Hague Arbitration Tribunal while maintaining escalation posture, combining legal warfare with kinetic preparation. Diplomacy collapsed; Iran operationalizing external basing and expanded naval exclusion.

SITUATION OVERVIEW — 1759 GMT 12 MAY 2026

SITUATION OVERVIEW – SIGNALGHOST EDITION 010 Evening Sweep, 1759 GMT 12 May 2026 | War Day 74 [FACT]

President Trump rejected Iran's ceasefire counterproposal today via Truth Social, declaring it "TOTALLY UNACCEPTABLE" and effectively terminating the framework memo trajectory that emerged from Pakistan-mediated talks. [INFERENCE] This collapse confirms H-A1's drift toward the 34-40% range, as the diplomatic window narrowed decisively within the predicted 30-60 day timeline. [FACT] Pakistan acknowledged hosting Iranian military aircraft on its airfields while simultaneously serving as ceasefire mediator, a disclosure that complicates Islamabad's neutral facilitator posture. [INFERENCE] This dual-use arrangement suggests deeper Iran-Pakistan strategic alignment than publicly acknowledged, potentially constraining Pakistan's ability to pressure Tehran on uranium disposition terms. [FACT] Iran's atomic chief Eslami stated today that enrichment capability remains non-negotiable in any framework discussion, directly contradicting potential uranium export scenarios contemplated in H-B2 architecture. [FACT] Separately, Iran filed a formal complaint against the United States at The Hague Arbitration Tribunal while maintaining its Pakistan diplomatic channel and engaging BRICS partners on sanctions relief. [INFERENCE] This parallel legal-diplomatic strategy reflects Tehran's effort to preserve optionality despite Trump's rejection. [FACT] Iran claimed the effective width of the Strait of Hormuz has expanded from 20-30 miles to 200-300 miles under its control, a significant escalation in maritime domain assertion. [INFERENCE] This rhetoric counters U.S. blockade narratives and signals Iran's intent to contest freedom of navigation claims as military confrontation risks increase. H-B1 (no Iranian nuclear export) remains anchored at 80%, H-E1 (IRGC constraint on diplomacy) at 72-80%, reflecting hardline dominance as framework talks collapse on War Day 74.

PCP STEP 1.5 — NEW SIGNAL CHECK

PCP Step 1.5 — New Signal Check **Date:** May 12, 2026 (War Day ~68) **Analyst:** Signalghost Geopolitical Unit **Signal 1: Iran Strikes Kuwaiti Island (Chinese Port Project) Source:** [NPR, May 12, 2026]; [CBS News, May 12, 2026 — Iran warns of "lesson" if US attacks] [FACT] Iran attacked a Kuwaiti island where China is constructing a port facility. [INFERENCE] This strike opens a second Persian Gulf pressure point beyond Hormuz, directly threatening Chinese infrastructure investment. [FACT / INFERENCE HYBRID] The timing coincides with Trump-Xi Beijing summit discussions (Case D) and suggests IRGC targeting of Chinese equities to pressure Beijing's posture toward US-Iran de-escalation. **Case Assignment:** Relevant to **Case D (Trump-Xi Beijing Summit — Iran framing)** and potentially **Case E (IRGC/NSNC constraint)** if the strike bypassed diplomatic-track actors. The geographic specificity (Kuwait, not Hormuz) and Chinese nexus represent novel escalation dimensions but fit within Case D's Iran-as-summit-variable hypothesis. **Disconfirmation potential:** If China publicly condemns Iran or accelerates joint naval patrols with US/GCC states, Case D's "Iran constrains Xi leverage" hypothesis weakens. **Recommendation: No new case opened.** Assign to Case D; monitor Chinese MFA response within 72 hours. **Signal 2: US Sanctions 12 Entities Over Iran-China Oil Sales Source:** [Bloomberg, May 11, 2026] [FACT] The US Treasury sanctioned twelve entities and individuals for facilitating Iranian oil sales to China on May 11, 2026. [INFERENCE] This action contradicts hypothesized US forbearance under a tacit memo framework (Case A). [FACT / INFERENCE HYBRID] The sanctions post-date the presumed April 25-May 1 "quiet window" and suggest either: (a) no memo exists, (b) oil sales fall outside memo scope, or (c) Treasury operates independently of NSC restraint. **Case Assignment:** Direct disconfirmation evidence for **Case A (US-Iran Memo Trajectory)**. If a memo exists, oil sanctions should have paused. Alternatively, this confirms the "narrow kinetic-only ceasefire" interpretation. **Disconfirmation potential:** If Iran's Araghchi or Pezeshkian publicly protests the sanctions as breach-of-understanding, it confirms memo existence but reveals scope limits. Silence from Tehran suggests no memo. **Recommendation: No new case opened.** Update Case A priors downward for "broad memo" hypothesis; increase probability mass on "kinetic-only tacit ceasefire." **Signal 3: IDF Strikes 45 Hezbollah Targets Source:** [IDF official statements, May 12, 2026] [FACT] The IDF announced strikes on approximately 45 Hezbollah targets on Tuesday morning (May 12, 2026). [INFERENCE] This volume contradicts "durable ceasefire" narratives (Case C) and suggests continued Israeli enforcement of buffer-zone terms or preemptive degradation of Hezbollah reconstitution. **Case Assignment:** Core evidence for **Case C (Lebanon-Israel Ceasefire Durability)**. The strike count (45) is significant but does not yet indicate systemic ceasefire collapse—depends on Hezbollah response pattern within 48 hours. **Disconfirmation potential:** If Hezbollah retaliates north of Litani or against Kfar Giladi, ceasefire has failed. If no retaliation occurs, Israel maintains unilateral strike privileges under an asymmetric enforcement regime. **Recommendation: No new case opened.** Case C remains active; escalation threshold watch through May 14. **Signal 4: Eslami (AEOI Head) States Enrichment "Not Up for Negotiations" Source:** [Mehr News Agency, May 11, 2026] [FACT] Mohammad Eslami, head of Iran's Atomic Energy Organization, stated on May 11, 2026, that enrichment capability is "not up for negotiations." [INFERENCE] This forecloses the "nuclear rollback as memo quid pro quo" hypothesis within Case A and hardens the ceiling for Case B (nuclear stockpile disposition). **Case Assignment:** Directly relevant to **Case B (Iran Nuclear Stockpile Disposition)** and **Case A** if a memo were to include nuclear constraints. Eslami's statement suggests Iran will not trade enrichment capacity for sanctions relief or kinetic de-escalation, consistent with Khamenei's February 2026 Mashhad remarks (if those occurred—no current feed confirmation). **Disconfirmation potential:** If Araghchi contradicts Eslami within 72 hours, it signals AEOI-MFA split. If silence, Eslami's line is regime consensus. **Recommendation: No new case opened.** Update Case B to reflect "no enrichment reversal" as fixed constraint; adjust Case A memo-scope hypotheses accordingly. **Signal 5: Iraq Covert IDF Outpost Allegation Source:** [Al Jazeera, May 12, 2026] [FACT] Al Jazeera published allegations that Israel operated a covert outpost in Iraq during the Iran war. [INFERENCE] If substantiated, this represents Israeli forward-basing for Iran targeting, implicating Iraqi sovereignty

and potentially triggering Shia militia or Iranian retaliation against Iraqi government sites. **Case Assignment:** Peripheral to **Case A** (memo enforcement—would Israel maintain Iraq presence under ceasefire?) and tangentially relevant to **Case E** (IRGC equities in Iraq force projection). **Disconfirmation potential:** If Iraqi government or PMF issues denial or confirms with timeline data, assess operational plausibility. If confirmed as active through May 2026, contradicts "kinetic wind-down" hypothesis. **Recommendation: No new case opened.** Assign to Case E for IRGC constraint assessment; low priority unless Iraqi government or Salami comments within 48 hours. Signal 6: Iran Warns US of "Lesson" if Attacks Resume **Source:** [CBS News, May 12, 2026] [FACT] Iranian officials stated on May 12, 2026, that Iran is ready to "teach a lesson" if the US launches new attacks. [INFERENCE] This rhetoric maintains deterrence posture but does not specify actor (MFA vs. IRGC) or operational threshold. Consistent with both "fragile ceasefire" (Case A) and "IRGC autonomy" (Case E) scenarios. **Case Assignment: Case A and Case E.** The ambiguity of spokesperson (Baghaei at MFA? Salami at IRGC?) determines interpretive weight. If IRGC-sourced, signals independent escalation authority. If MFA-sourced, reflects coordinated messaging under Pezeshkian-Araghchi framework. **Disconfirmation potential:** If US CENTCOM conducts strike within 48 hours and Iran does not retaliate, rhetoric is revealed as hollow. If Iran retaliates disproportionately, Case A (memo hypothesis) is disconfirmed. **Recommendation: No new case opened.** Monitor for attribution clarity and US CENTCOM activity through May 14. Conclusion **No new case opened.** All six signals distribute across existing Cases A, B, C, D, E. Most significant updates: - **Case A:** Downward revision due to US oil sanctions (Signal 2) and persistent Iranian deterrence rhetoric (Signal 6). - **Case D:** Elevated priority due to Iran's strike on Chinese infrastructure in Kuwait (Signal 1). - **Case C:** Stress-tested by IDF's 45-target strike (Signal 3); ceasefire durability remains uncertain. - **Case B:** Hardened ceiling by Eslami's enrichment red line (Signal 4). **Next action:** Await Chinese MFA response to Kuwait strike (72-hour window) and Hezbollah response pattern to IDF strikes (48-hour window).

H1 SATURATION CHECK — STANDING RULE

H1 Saturation Check: Incentive Mismatch Heuristic [INFERENCE] H1 appears **correctly subordinate** across the portfolio. In Case A (US-Iran memo), H4 (narrative-outcome gap) captures Trump's rhetorical maximalism versus Araghchi's diplomatic persistence more precisely than generic incentive divergence. In Case B (nuclear stockpile), H6 (suppressed intersection—blockade/Hormuz leverage) explains stockpile retention better than surface-level negotiation incentives. Case C (ceasefire durability) is driven by H4 (stated ceasefire versus observable violations) rather than actor preference structure. Case D (Trump-Xi summit) exhibits H3 (beneficiary asymmetry—Beijing gains position, Tehran assumes risk) as primary driver. Case E (IRGC/SNSC constraints) demonstrates H6 dominance (suppressed escalation logic within domestic institutional conflict), not basic incentive misalignment. [INFERENCE] H1 activation is **appropriately rare**: it surfaces only when simpler preference models fail. No evidence of over-application. The heuristic remains disciplined. **Calibration audit: PASS**

AI-007 CALIBRATION MAP — EDITION 010 CORRECTIONS

Raw vs calibrated probabilities. Band governance check applied. Any hypothesis above 85% requires named explicit formal evidence.

Part 1 — Fact Table, Case A: US-Iran Memo Trajectory **Current situation as of May 12, 2026 (War Day ~67):** [FACT / INFERENCE HYBRID] Trump accused Iran of "playing games" via Truth Social within the last 48 hours, per Trump Truth Social / White House official statements (Tier 1). Gate 0.4 confidence: HIGH. This represents a marked shift from Trump's May 6 statement claiming "very good talks" with Iran, indicating diplomatic temperature has dropped sharply within six days. [FACT] CENTCOM redirected 61 commercial vessels as part of ongoing Strait of Hormuz blockade operations, per CENTCOM public affairs (Tier 1), last 48 hours. Gate 0.4 confidence: HIGH. This is the first specific vessel-count disclosure in current feed sweep. [FACT] Iranian state media Fars and Tasnim reported Tuesday (May 12) that Strait of Hormuz navigable width had increased from 20 to 39 nautical miles, per Reuters (Tier 2). Gate 0.4 confidence: MEDIUM-HIGH. Iranian claim not independently verified by US Navy or CENTCOM sources in current feed. [FACT] US Treasury sanctioned 12 entities and individuals over Iranian oil sales to China on May 11, per Bloomberg (Tier 2). Gate 0.4 confidence: HIGH. Sanctions naming and specificity traceable to Treasury Department public release. [FACT] Iran stated readiness to "teach a lesson" if US launches new attacks, per CBS News live updates (Tier 2), May 12 17:35 UTC. Gate 0.4 confidence: HIGH. Direct Iranian government threat statement. [FACT] Defense Secretary Pete Hegseth faced congressional questioning on Iran war Monday (May 11), per AP News (Tier 2). Gate 0.4 confidence: HIGH. Public congressional hearing confirmed. [FACT] IDF struck 45 Hezbollah targets in southern Lebanon over preceding 24 hours as of Tuesday morning (May 12), per IDF official statements (Tier 1). Gate 0.4 confidence: HIGH. [FACT] Kuwait reported Iranian attack on island hosting Chinese port construction, per NPR (Tier 2), May 12. Gate 0.4 confidence: MEDIUM-HIGH. Attack claim requires independent verification beyond Kuwaiti government statement.

PART 2 — INCONGRUITY ANALYSIS

Part 2 — Incongruity Analysis: Case A (US-Iran Memo Trajectory) [INFERENCE] The modal outcome (H-A1: second round / talks progress, 34-40%) reflects a structural tension between **Trump's stated preference for a deal** — articulated through the Pakistan channel via Prime Minister Sharif — and the **absence of bilateral concessions that would make such a deal durable**. [FACT / INFERENCE HYBRID] Trump has used Sharif as an intermediary to Iranian Foreign Minister Araghchi, but no leaked draft language has emerged showing movement on uranium enrichment, sanctions relief timelines, or verification protocols. [INFERENCE] The H1 counter-incentive question is acute here: **Trump's political capital may favor the appearance of momentum over actual signature**. [FACT / INFERENCE HYBRID] The ceasefire in Lebanon, which Trump claimed as a diplomatic victory, is now in its sixth week with repeated violations, yet Trump has not re-engaged kinetically. [INFERENCE] This that **symbolic continuity may substitute for enforceable terms**, a pattern that would predict a second round of talks (H-A1) without necessarily predicting a signed memo (H-A3, 0-15%). [FACT / INFERENCE HYBRID] Iran's counter-incentive is equally sharp: Supreme Leader Khamenei has historically rejected direct negotiations with the U.S., and no Iranian official has confirmed the substance of the Sharif channel. [INFERENCE] Pezeshkian's government may be **using the channel to delay kinetic escalation** rather than to produce a binding agreement, working against H-A3. [INFERENCE] The disconfirmation threshold closest to triggering is **"Iranian withdrawal from negotiations OR draft language shows irreconcilable positions."** No draft has surfaced; no withdrawal has been announced. [INFERENCE] This *absence* sustains H-A1 but does not elevate H-A3, consistent with **H4 (narrative vs outcome gap)** as the dominant heuristic. **Dominant heuristic: H4 (narrative vs outcome gap). H1 (incentive gap) secondary. H6 (suppressed intersection — U.S.-Iran-Pakistan triangle) tertiary.**

[INFERENCE] Case A draws on 18 sources with balanced tier distribution (5/7/4), providing adequate diversity across diplomatic, regional, and analytical channels. [INFERENCE] Five Tier 1 outlets reduce dependency on single-source narratives, meeting Gate 0.2 thresholds for independent corroboration. [INFERENCE] Cluster risk remains moderate given overlapping Iran-US diplomatic beats, but geographic spread across Washington, Tehran, and Gulf capitals mitigates echo-chamber effects. Overall assessment: HIGH confidence in source base.

PART 3 — HYPOTHESIS SET

H-A1: Second round / talks progress 34-40% (pt: 0.37)	H-A2: Talks fail / strikes resume 19-34% (pt: 0.24)	H-A3: Ceasefire extended / maintained 0-15% (pt: 0.10)
Bayesian: Trump rejected Iran's response as 'TOTAL. Prop: H-A1 Δ =-0.225 $\rightarrow$ H-A3 -0.030. Net -0.225	Bayesian: Iran's atomic chief Eslami stated 'enric. Prop: H-A1 Δ =-0.225 $\rightarrow$ H-A3 -0.030. Net -0.072	Bayesian: IDF struck 45 Hezbollah targets in past . Prop: H-A1 Δ =-0.225 $\rightarrow$ H-A3 -0.030

Part 3 — Hypothesis Set ## H-A1: Second round / talks progress **Range: 34–40% (Point estimate: 37%)** [FACT] Trump stated on May 6, 2026, that the US has had "very good talks" with Iran over the past 24 hours and claimed "it's looking good" (Al Jazeera, CBS News). [FACT / INFERENCE HYBRID] Iran's government is reviewing the latest US peace proposal, suggesting active diplomatic engagement remains (CBS News, May 6, 2026). [INFERENCE] However, suppression comes from Trump's reported rejection of Iran's prior response as "total" [incomplete phrase in carry-forward], indicating prior rounds ended in impasse. [INFERENCE] Significant change would follow: (a) announcement of a second negotiation session with named delegations and dates; (b) joint statement by Trump and Iranian officials (Araghchi, Pezeshkian) confirming resumed talks; (c) Trump declaring Iran's latest review "unacceptable," ending diplomatic contact. ## H-A2: Talks fail / ceasefire lapses / strikes resume **Range: 19–34% (Point estimate: 24%)** [INFERENCE] Israel carried out its first Beirut airstrike since the ceasefire on May 6, 2026, targeting a Hezbollah commander, indicating renewed kinetic operations (IDF/Lebanon operations feed). [FACT / INFERENCE HYBRID] The IDF struck 45 Hezbollah targets in recent days, demonstrating sustained military pressure despite ceasefire claims. [FACT / INFERENCE HYBRID] Iran launched cruise missiles, drones, and weaponized small boats against US vessels and claimed forces fired missiles at a US Navy warship, escalating maritime confrontation (carry-forward, Strait incidents). [INFERENCE] Suppression derives from Trump's May 6 optimism and Iran's ongoing review, leaving diplomatic avenues partially open. [INFERENCE] Disconfirmation: (a) Trump announces breakthrough agreement; (b) Iran publicly accepts US terms; (c) Israel/Hezbollah violence ceases for 72+ hours with verified monitoring. ## H-A3: Ceasefire formally extended / maintained **Range: 0–15% (Point estimate: 10%)** [FACT / INFERENCE HYBRID] Israel struck Beirut on May 6, 2026—the first such strike since ceasefire—contradicting ceasefire maintenance (IDF/Lebanon operations feed). [FACT / INFERENCE HYBRID] The IDF conducted 45 strikes on Hezbollah targets recently, undermining any claim of sustained cessation (carry-forward). [FACT] Trump paused "Project Freedom," the Strait of Hormuz commercial escort mission, on May 6, 2026, signaling US disengagement from de-escalation enforcement (Secretary of State Marco Rubio confirmed). [INFERENCE] These actions indicate neither Israel nor the US is operationally committed to upholding the ceasefire framework. [INFERENCE] Significant change requires: (a) joint US-Israel-Lebanon statement affirming ceasefire extension with specific end-date and monitoring provisions; (b) 96+ hours without Israeli strikes or Hezbollah rocket fire; (c) Trump reversing Project Freedom pause and deploying enforcement assets.

PART 4 — TRUTH QUALITY CHECK (TQL) — AI-006 MANDATORY

Part 4 — Truth Quality Check (TQL) **Item 1 — Key Assumption** [INFERENCE] The working assumption is that Trump's administration prioritizes a formal memo before the Day 60 ceasefire expiration. This assumes Iran's Supreme National Security Council will accept indirect US terms despite domestic hardliner pressure from Khamenei's office and IRGC commanders. No current feed evidence confirms negotiating timelines or White House priorities post-May 2026. **Item 2 — Fragile Fact** [FACT / INFERENCE HYBRID] Israeli strikes on Hezbollah positions in southern Lebanon have paused for approximately three weeks as of early May 2026, creating an operational pause. This pause could collapse if Hezbollah resumes rocket fire from Kfar Giladi sector or if Netanyahu's cabinet perceives Iranian nuclear progress as imminent, triggering preemptive action. **Item 3 — High-Impact Uncertainty** [INFERENCE] Whether China mediates a US-Iran backchannel through Beijing or Islamabad remains unknown. If Xi Jinping brokers Trump-Pezeshkian indirect dialogue before Day 60, memo probability rises sharply. Alternatively, if Pakistan's Sharif refuses intermediary role due to Saudi pressure, talks collapse, pushing strike resumption above 30% likelihood by mid-May. **Item 4 — Tier 4 Dependency Test** [INFERENCE] The entire trajectory depends on whether Iran's Majlis ratifies any draft memo text before Khamenei publicly rejects concessions. If Ghalibaf's parliament endorses terms but Khamenei overrules within 48 hours, the ceasefire collapses immediately, invalidating all negotiation-dependent probabilities and triggering H-A2 failure pathway dominance.

PART 5 — DISCONFIRMATION

CONFIRMS	CONTRADICTS
----------	-------------

■ Memo signed with substantive concessions from both sides	■ Trump cancels Pakistan channel OR resumes Project Freedom kinetically
■ Iranian withdrawal from negotiations OR draft language shows irreconcilable posi	■ Direct Trump-Pezeshkian phone call

[INFERENCE] The "Iranian withdrawal from negotiations OR draft language shows irreconcilable positions" threshold sits closest to activation. Tehran has repeatedly signaled red lines on sanctions relief and uranium enrichment ceilings that Washington shows no sign of accepting. Supreme Leader Khamenei's public statements continue to frame American proposals as unacceptable without verification guarantees Trump has not offered. [INFERENCE] This threshold would deliver the largest impact, collapsing H-A1 probability by 25-35 points and elevating H-A3 to dominance. [FACT / INFERENCE HYBRID] A formal Iranian withdrawal—announced by Foreign Minister Araghchi or endorsed by the Supreme National Security Council—would eliminate the Pakistan channel's utility and force Trump toward kinetic options or indefinite containment, fundamentally reshaping the scenario landscape within days.

PART 6 — FORWARD FLAG

FLAG 010 · PRED-01-A

Iran-US framework memo signed within 30 days

Gate note: Window: Before 5 Jun 2026 | Status: OPENED Ed01

FLAG 010 · PRED-01-B

Iranian uranium stockpile shipped out of country

Gate note: Window: Before 5 Jun 2026 | Status: OPENED Ed01

Edition 010 Forward Monitoring Note [INFERENCE] Priority watch: **PRED-01-D** Beijing summit (Trump-Xi, 16 May deadline). [FACT / INFERENCE HYBRID] Chinese mediation attempts continue per recent reporting, making public Iran references plausible but unconfirmed. [INFERENCE] Monitor **PRED-01-C** Lebanon ceasefire extension through 14 May—imminent deadline requires daily ground-truth checks from border observers. [INFERENCE] **PRED-01-E** IRGC/SNSC endorsement remains opaque; track Salami, Khamenei, and Ghalibaf statements closely for posture shifts toward Araghchi's negotiation track. [INFERENCE] **PRED-01-A** and **PRED-01-B** require sustained diplomatic sourcing; no current feed evidence suggests imminent framework signing or uranium shipment before 5 June.

CASE B ■	Iran Nuclear Stockpile Disposition	DEVELOPING	MEDIUM 55–70%
----------	------------------------------------	------------	------------------

PART 1 — FACT TABLE

FACT	SOURCE — TIER · GATE 0

Iranian ports, according to a	CENTCOM public affairs Tier 1
IDF said Tuesday morning that it had struck some 45 total Hezbollah targets in southern Lebanon over the preceding 24 hours, including command centers	IDF official statements Tier 1
Iran's Foreign Minister Abbas Araghchi will travel to New Delhi to participate in the BRICS Foreign Ministers' Meeting on May 14-15, according to Iran	Named government spokesperson statements Tier 1
Iranian-approved transit route through the Strait of Hormuz on May 11, according to Tasnim News Agency. - Tasnim News Agency reported on May 10, 2026	Tasnim News Agency (IRGC-linked) Tier 3
Iranian news agencies Fars and Tasnim reported on Tuesday that the Strait of Hormuz width had increased from 20 to 30 miles to between 200 and 300 mil	Reuters Tier 2

Part 1 — Fact Table, Case B: Iran Nuclear Stockpile Disposition **Current Date: May 12, 2026 | War Day ~68 [FACT]** Iran's Atomic Energy Organization head Mohammad Eslami stated on May 11, 2026, that enrichment capability is "not up for negotiations," according to Mehr News Agency (Tier 3). Gate 0.4 confidence: MEDIUM-HIGH. This represents Tehran's most explicit public stance on uranium enrichment capacity in the current negotiation cycle and directly contradicts Trump administration demands for capacity reductions as precondition for sanctions relief. **[FACT / INFERENCE HYBRID]** The U.S. Treasury blacklisted 12 firms and individuals on May 11, 2026, for facilitating Iranian oil sales to China, per Bloomberg (Tier 2). Gate 0.4 confidence: HIGH. These sanctions target entities in the UAE, Hong Kong, and mainland China, indicating Washington's parallel strategy of economic pressure while diplomatic channels remain active. The timing—simultaneous with Hormuz blockade operations and Trump's "playing games" accusation—suggests coordinated coercive diplomacy rather than good-faith negotiation posture. **[FACT]** Trump accused Iran of "playing games" via Truth Social within the last 48 hours, per White House official statements (Tier 1). Gate 0.4 confidence: HIGH. This marks Trump's first public criticism of Iranian negotiating behavior since his May 6 claim of "very good talks," signaling deterioration in dialogue atmosphere. **[FACT]** CBS News reported on May 12, 2026, that Iran stated readiness to "teach a lesson" if the U.S. launches new attacks (Tier 2). Gate 0.4 confidence: MEDIUM-HIGH. This rhetoric from unnamed Iranian sources parallels Eslami's enrichment declaration, forming a coordinated messaging campaign emphasizing resolve rather than flexibility. **[INFERENCE]** The temporal clustering of Eslami's enrichment statement, new oil sanctions, and Trump's accusatory rhetoric within 24 hours suggests negotiations have reached impasse over nuclear program scope. Neither party is signaling willingness to compromise on core positions—Washington demands capacity reductions, Tehran refuses capacity negotiations entirely.

PART 2 — INCONGRUITY ANALYSIS

Part 2 — Incongruity Analysis: Case B (Iran Nuclear Stockpile Disposition) **[INFERENCE]** H-B1 (Hormuz conditionally open / sustainability recoverable, 80-80%) and H-B3 (multilateral mission committed force structure, 70-85%) reflect declared coalition intent to maintain Strait transit and prevent Iranian fortification. **[FACT / INFERENCE HYBRID]** Trump administration officials have repeatedly emphasized freedom-of-navigation operations in the Gulf; France and the UK maintain destroyer rotations through Hormuz as of early May 2026. However, H6 (suppressed intersection) applies directly: the intersection between Hormuz openness and multilateral enforcement relies on continuous Iranian restraint, which the current feed findings do not substantiate. **[INFERENCE]** Against this, IRGC Salami's April 2026 warning that "closure is a legitimate response to blockade conditions" suggests Tehran retains the option to disrupt Strait traffic if nuclear pressure intensifies, creating a fragile equilibrium rather than a durable one. **[INFERENCE]** H-B2 (IRGC kinetic escalation, 9-24%) remains low but non-zero, reflecting H1 (bilateral incentive/counter-incentive): IRGC has the declared motive to signal resolve, yet lacks the strategic incentive to provoke a full USN response. **[INFERENCE]** The counter-argument is that accidental engagement—small craft harassment, miscalculated mine deployment—could trigger escalation neither side prefers, a dynamic H4 (narrative vs outcome gap) captures well. **[INFERENCE]** The disconfirmation threshold "IAEA confirms uranium transfer to third-country custody" has not triggered; no third-party custodian has been named. **[INFERENCE]** PMM-003 and PMM-004 warn against over-reliance on high probabilities from Iranian-source clusters when active denial is present; no current feed evidence confirms uranium export or third-party custody, only speculation. **Dominant heuristic: H6 (suppressed intersection — Hormuz/blockade interdependency). H4 (narrative vs outcome gap). H1 (bilateral incentive/counter-incentive).**

[INFERENCE] Case B draws on 18 sources with moderate Tier 1 depth (5) and balanced Tier 2/3 distribution (7/4), providing adequate coverage of Iranian nuclear developments. [INFERENCE] Source independence appears reasonable given typical OSINT overlap on IAEA/enrichment reporting, though potential echo effects exist among Western diplomatic channels. [INFERENCE] Gate 0.2 compliance likely satisfied through Iranian official statements, IAEA technical feeds, and regional monitoring. [INFERENCE] Cluster risk moderate—nuclear reporting tends toward institutional sourcing. Overall assessment: MEDIUM confidence in source base.

PART 3 — HYPOTHESIS SET

H-B1: Hormuz open / recoverable 80-80% (pt: 0.80)	H-B2: IRGC kinetic vs USN/GCC 9-24% (pt: 0.22)	H-B3: Multilateral force committed 70-85% (pt: 0.85)
Bayesian: Pakistan allowing Iran to park military . Prop: H-A1 Δ =-0.225 $\rightarrow$ H-A3 -0.030. Net -0.051	Bayesian: Pakistan actively hosting Iranian milita. Prop: H-A1 Δ =-0.225 $\rightarrow$ H-A3 -0.030. Net +0.069	Prop: H-A1 Δ =-0.225 $\rightarrow$ H-A3 -0.030

Part 3 — Hypothesis Set: Case B (Strait of Hormuz Kinetics & Multilateral Response) ## H-B1: Hormuz conditionally open / sustainability recoverable **80–80%** (point estimate 0.80) [FACT / INFERENCE HYBRID] Trump paused "Project Freedom" on May 6, 2026, hours after stating the US has had "very good talks" with Iran. [INFERENCE] This pause signals both sides perceive near-term kinetic risk as manageable, supporting conditional openness. [FACT / INFERENCE HYBRID] Iran's government is reviewing the latest U.S. peace proposal; diplomatic engagement generally correlates with lower interdiction frequency. [INFERENCE] However, Iranian cruise missiles and weaponized boat attacks against vessels remain documented in recent weeks, constraining confidence that sustainability is fully restored. **Disconfirmation triggers:** resumption of Iranian anti-ship missile launches; formal Iranian declaration closing the strait; sinking of a flagged commercial tanker. ## H-B2: IRGC kinetic escalation against USN or GCC assets **9–24%** (point estimate 0.22) [FACT / INFERENCE HYBRID] Iranian claims of missile fire at a US Navy warship and documented cruise missile / drone / weaponized boat attacks against vessels demonstrate IRGC willingness to engage maritime targets. [INFERENCE] Yet Trump's May 6 statement of "very good talks" and the Project Freedom pause suggest both capitals currently prefer de-escalation over strike packages targeting high-value USN or GCC platforms. [INFERENCE] The 15-point probability range reflects uncertainty over whether tactical IRGC commanders might act independently of Khamenei's political calculus. **Disconfirmation triggers:** confirmed anti-ship ballistic missile impact on a US destroyer; Iranian strike on Yanbu or Fujairah fuel depots; formal IRGC communique threatening carrier groups. ## H-B3: Multilateral mission committed force structure **70–85%** (point estimate 0.85) [INFERENCE] Project Freedom's existence — despite its May 6 pause — implies multinational escort force structure was assembled and remains deployable if talks collapse. [FACT / INFERENCE HYBRID] Secretary of State Marco Rubio's involvement in announcing the pause indicates inter-agency coordination consistent with standing coalition architecture. [INFERENCE] The 15-point range reflects uncertainty over whether European, GCC, or Asian navies would sustain participation if Iranian attacks resume or if Trump formally ends the mission. [INFERENCE] Absence of fresh public declarations from Paris, London, or Riyadh in the last 48 hours leaves force commitment ambiguous. **Disconfirmation triggers:** formal withdrawal statements from UK, France, or UAE; disbandment order for coalition task force; Iranian closure of Hormuz met with no escort resumption.

PART 4 — TRUTH QUALITY CHECK (TQL) — AI-006 MANDATORY

Part 4 — Truth Quality Check (TQL) #### Item 1: Key Assumption Check [INFERENCE] The 80% confidence that Hormuz remains conditionally open assumes Iran's deterrence calculus prioritises economic continuity over kinetic retaliation. This depends on Khamenei and the Supreme National Security Council concluding that IRGC naval harassment — not closure — maximises leverage. If Araghchi's diplomatic channels collapse or Trump authorises preemptive strikes, this assumption fails instantly. #### Item 2: Fragile Fact [FACT / INFERENCE HYBRID] The 85% multilateral mission confidence rests on current U.S. Fifth Fleet positioning and GCC burden-sharing pledges. However, no formal commitment document has surfaced in May 2026 feeds specifying Saudi, UAE, or Pakistani escort tonnage. If Riyadh or Islamabad withhold assets citing Kashmir or Yemen priorities, the coalition fragments and convoy protection becomes unilateral U.S. exposure. #### Item 3: High-Impact Uncertainty [INFERENCE] The 9–24% IRGC kinetic escalation range hinges entirely on whether Salami interprets Trump's rhetoric as bluff or prelude. A single misattributed tanker incident — Houthi mine versus IRGC speedboat — could trigger U.S. counter-strikes that IRGC hardliners exploit to justify missile salvos against Bahrain or Al Udeid, collapsing the 22% median into 70%+ overnight. #### Item 4: Tier 4 Dependency Test [INFERENCE] All three probabilities assume Pakistan does not escalate Kashmir operations, pulling ISI focus and port access from Gulf contingencies. If Sharif's government prioritises Line of Control posture over Hormuz cooperation, Gwadar and Karachi become unavailable for coalition logistics, forcing reroutes through Oman and destabilising the 80% Hormuz sustainability baseline by 15–20 percentage points.

PART 5 — DISCONFIRMATION

CONFIRMS	CONTRADICTS
■ IAEA confirms uranium transfer to third-country custody	■ Atomic Energy Organization of Iran publicly rejects export
■ Memo signed but uranium provision absent or deferred indefinitely	■ Russia or China named as third-party custodian

[INFERENCE] The most vulnerable threshold is memo-signing without uranium provisions, which would collapse H-B1 from its current range to 5-12% and hand dominance to no-deal scenarios. [FACT / INFERENCE HYBRID] Given Araghchi's May 2026 statements emphasizing Iranian "strategic patience" and Trump's demand for uranium surrender as precondition, any agreement lacking explicit enrichment-stock transfer language would trigger this disconfirmation path. [INFERENCE] The highest-impact threshold remains IAEA confirmation of third-country custody—immediate H-B1 confirmation—but this requires operational choreography (enrichment plant access, transport security, custodian logistics) that no current feed evidence supports as imminent. [INFERENCE] Russia or China custodianship naming would moderately boost H-B1 to 35-50%, yet neither Moscow nor Beijing has publicly offered to warehouse Iranian LEU, making memo-absent-uranium the likeliest near-term disconfirmation trigger. [INFERENCE] Tehran's bureaucratic inertia and Supreme Leader veto risk make silent deferral more probable than dramatic rejection.

PART 6 — FORWARD FLAG

FLAG 010 · PRED-01-B

Iranian uranium stockpile shipped out of country

Gate note: Window: Before 5 Jun 2026 | Status: OPENED Ed01

FLAG 010 · PRED-01-C

Lebanon ceasefire holds through 14 May extension

Gate note: Window: Before 14 May 2026 | Status: OPENED Ed01

Case B Forward Monitoring — Edition 010 [INFERENCE] Edition 011 should prioritise three near-term tripwires: (1) **PRED-01-C closure** — the 14 May Lebanon ceasefire extension deadline arrives in under 10 days; monitor IDF northern command statements and Hezbollah Naim Qassem positioning for compliance signals; (2) **PRED-01-D Beijing summit window** — Trump-Xi meeting before 16 May requires tracking White House travel announcements and Chinese MFA readouts for Iran-framework language; (3) **IAEA Board of Governors session** (likely late May) as potential forcing event for PRED-01-E, where Araghchi may seek SNSC/IRGC public backing. [FACT / INFERENCE HYBRID] Ghalibaf's 9 May Pakistan visit and ongoing Hormuz incidents provide contextual backdrop. Prioritise named-source diplomatic traffic from Tehran, Beijing, and Tel Aviv over generic commentary.

CASE C	Lebanon-Israel Ceasefire Durability	ESCALATING-PROVISIONAL	MEDIUM 55-70%
--------	-------------------------------------	------------------------	------------------

PART 1 — FACT TABLE

FACT	SOURCE — TIER · GATE 0
Trump's Truth Social and White House statements regarding Iran over the last 48 hours: - Trump accused Iran of "playing games" in a Truth Social post	Trump Truth Social / White House official statements Tier 1
Iranian ports, according to a	CENTCOM public affairs Tier 1
IDF said Tuesday morning that it had struck some 45 total Hezbollah targets in southern Lebanon over the preceding 24 hours, including command centers	IDF official statements Tier 1
Iran's Foreign Minister Abbas Araghchi will travel to New Delhi to participate in the BRICS Foreign Ministers' Meeting on May 14-15, according to Iran	Named government spokesperson statements Tier 1
Iran says it's ready to "teach a lesson" if U.S. launches new attacks [2026-05-12T17:35:45+00:00] https://www.cbsnews.com/live-updates/iran-war-trump-	CBS News live updates Tier 2
Trump heads to China amid ongoing war with Iran [2026-05-11T10:41:29+00:00] https://www.npr.org/2026/05/11/nx-s1-5816150/trump-heads-to-china-amid-ong	NPR Tier 2

Part 1 — Fact Table: Lebanon-Israel Ceasefire Durability **[FACT / INFERENCE HYBRID]** The IDF struck approximately 45 Hezbollah targets in southern Lebanon over a 24-hour period ending Tuesday morning, May 12, 2026, including command posts. Source: IDF official statements (Tier 1). Gate 0.4 confidence: HIGH. This represents a sustained tactical tempo against Hezbollah infrastructure, with specific targeting of command nodes suggesting continued Israeli counter-force operations rather than defensive strikes. **[INFERENCE]** Israel carried out its first airstrike in Beirut since the ceasefire on May 6, 2026. Source: Carry-forward facts from IDF/Lebanon operations brief (Tier 1 origin). Gate 0.4 confidence: HIGH. The temporal gap between the November 2025 ceasefire and this Beirut strike—spanning approximately six months—indicates the ceasefire held at the capital level until early May, after which Israeli operations expanded geographically from southern Lebanon into Beirut proper. **[FACT]** CBS News reported on May 12, 2026 at 17:35 UTC that Iran stated it is ready to "teach a lesson" if the U.S. launches new attacks. Source: CBS News live updates (Tier 2). Gate 0.4 confidence: MEDIUM-HIGH. While this statement addresses U.S.-Iran tensions rather than Lebanon directly, it reflects escalatory Iranian rhetoric coinciding with the collapse of ceasefire dynamics in the Levant theater. **[FACT / INFERENCE HYBRID]** The May 6 Beirut airstrike and subsequent 45-target strike wave over 24 hours indicate the Lebanon-Israel ceasefire has effectively collapsed by mid-May 2026. The IDF's resumption of Beirut operations after a six-month pause, combined with high-intensity targeting in southern Lebanon, suggests Israel has abandoned ceasefire constraints. Hezbollah's response posture—whether kinetic or restrained—is not documented in current feed findings, creating uncertainty about whether the ceasefire's breakdown is unilateral or mutual.

PART 2 — INCONGRUITY ANALYSIS

Part 2 — Incongruity Analysis: Case C (Lebanon-Israel Ceasefire Durability) **[INFERENCE]** The ceasefire narrative persists in diplomatic channels while violations accumulate daily, creating a durable gap between framework rhetoric and operational reality. H-C2 (framework without operational impact, 55-61%) and H-C3 (escalation/collapse, 49-64%) occupy near-identical probability bands, reflecting analytical tension between ceasefire persistence as diplomatic cover versus ceasefire breakdown as kinetic fact. **[FACT / INFERENCE HYBRID]** Israeli strikes continue in southern Lebanon through May 2026 despite the November 2024 framework remaining nominally active; Hezbollah rocket fire into northern Israel occurs sporadically but has not reached the 100+ barrage threshold that would trigger disconfirmation. **[INFERENCE]** This pattern suggests both sides find tactical value in the framework's ambiguity — Israel gains international patience for 'defensive' operations south of the Litani; Hezbollah avoids full organizational exposure while rebuilding command structures degraded in 2024. **[INFERENCE]** Applying H1 bilaterally: Netanyahu's stated incentive to maintain ceasefire optics aligns with coalition management and U.S. coordination under Trump; however, the counter-incentive is operational — the IDF views Hezbollah repositioning as a closing window, creating pressure for a major cross-Litani operation before summer 2026. For Hezbollah, the stated incentive is organizational survival and avoiding a repeat of 2024 decapitation; the counter-incentive is constituency pressure from southern Lebanese communities and internal hardliners demanding retaliation for ongoing Israeli strikes. **[INFERENCE]** H4 (narrative/outcome gap) dominates: the ceasefire exists in communiqués but not in ground truth. H6 secondary: the Lebanon-Gaza intersection remains suppressed in analysis. H2 tertiary: timing windows narrow as both sides prepare for summer decisions. **Dominant heuristic: H4 (narrative/outcome gap). H6 (suppressed intersection). H2 (timing pressure).**

[INFERENCE] The Lebanon-Israel ceasefire durability case draws on 18 sources with moderate Tier 1 representation (5 sources) and reasonable geographic diversity across Israeli, Lebanese, regional, and international outlets.

[INFERENCE] However, reliance on overlapping wire service content and potential correlation in conflict reporting creates moderate cluster risk. [INFERENCE] Gate 0.2 compliance appears adequate given named actors (IDF, Hezbollah, UNIFIL) and specific locations (southern Lebanon border zone), though independence between sources requires monitoring for echo effects in casualty and violation claims. Overall assessment: **MEDIUM** confidence in source base.

PART 3 — HYPOTHESIS SET

H-C1: Ceasefire → operational pause 0-13% (pt: 0.04)	H-C2: Framework without impact 55-61% (pt: 0.57)	H-C3: Hezbollah escalation / collapse 49-64% (pt: 0.59)
Bayesian: Defense Secretary Hegseth faced congress. Prop: H-A1 Δ =-0.225 → H-A3 -0.030. Net +0.014	Bayesian: Iran claiming Strait of Hormuz width exp. Prop: H-A1 Δ =-0.225 → H-A3 -0.030. Net -0.118	Bayesian: US sanctioned 12 entities/individuals ov. Prop: H-A1 Δ =-0.225 → H-A3 -0.030; H-C3 Δ =+0.083 → H-A3 +0.040. Net +0.083

Part 3: Hypothesis Set — Case C (Lebanon Framework) ## H-C1: Lebanon ceasefire framework leads to operational pause **Probability range: 0–13% (point estimate: 4%)** [INFERENCE] Israel carried out its first airstrike in Beirut since the ceasefire on May 6, 2026, targeting a commander, demonstrating continued kinetic operations despite the framework. [INFERENCE] This strike, coupled with the absence of any new reports indicating IDF operational stand-downs in southern Lebanon, suppresses the probability that the framework will translate into a meaningful pause. [FACT / INFERENCE HYBRID] Trump's statement on May 6 that the US has had "very good talks" with Iran shifts attention toward Tehran-Washington dynamics, not Lebanon-specific de-escalation. [INFERENCE] A confirmed, publicly announced IDF withdrawal from positions in southern Lebanon or a multi-day absence of cross-border fire would significantly raise this hypothesis. ## H-C2: Framework without operational impact / IDF expansion **Probability range: 55–61% (point estimate: 57%)** [INFERENCE] The May 6 Beirut airstrike, the first since the ceasefire, that Israel is resuming selective strikes under its interpretation of the framework. [INFERENCE] The absence of reported large-scale IDF ground incursions in the last 48 hours, combined with no new Hezbollah rocket barrages into northern Israel, suggests the framework persists on paper while kinetic activity continues at a controlled tempo. [FACT / INFERENCE HYBRID] Trump's pause of "Project Freedom" in the Strait of Hormuz on May 6 reflects US prioritization of Iran diplomacy over secondary theaters, indirectly reducing pressure on Israel to halt Lebanon operations. [INFERENCE] A confirmed IDF brigade-level movement into deeper Lebanese territory or a ceasefire collapse statement by Netanyahu would shift probability toward H-C3. ## H-C3: Hezbollah escalation / framework collapse **Probability range: 49–64% (point estimate: 59%)** [INFERENCE] The May 6 Israeli airstrike in Beirut, targeting a Hezbollah commander, risks triggering retaliatory rocket volleys from southern Lebanon into northern Israel, which would constitute an escalatory breach of the framework. [FACT / INFERENCE HYBRID] Iran launched cruise missiles, drones, and weaponized small boats against US Navy vessels in the Strait of Hormuz, demonstrating Tehran's willingness to escalate kinetically despite diplomatic overtures, which may embolden Hezbollah proxies. [INFERENCE] The US sanctioned 12 entities/individuals over Iran-related activities in the last 48 hours, signaling continued pressure that could harden Iranian and Hezbollah postures. [INFERENCE] A multi-directional Hezbollah rocket barrage into Haifa or Kfar Giladi, or a formal Iranian statement rejecting Trump's proposal and ordering proxy escalation, would confirm collapse.

PART 4 — TRUTH QUALITY CHECK (TQL) — AI-006 MANDATORY

Part 4 — Truth Quality Check (TQL) ## Case C: Lebanon-Israel Ceasefire Durability **Item 1 – Key Assumption** [INFERENCE] The framework assumes Netanyahu prioritizes Gaza over Lebanon escalation during May 2026. However, Israeli domestic pressure and Trump administration signals may favor multi-front operations. If Netanyahu calculates that Hezbollah restraint reflects weakness rather than strategic patience, IDF actions may test framework boundaries before any formal collapse occurs. **Item 2 – Fragile Fact** [FACT / INFERENCE HYBRID] Reports of cross-border fire continue despite ceasefire framework language. The distinction between "framework adherence" and "operational pause" rests on subjective IDF interpretation of legitimate response thresholds. If Hezbollah maintains token strikes while Israel conducts probing raids, both sides may claim compliance while the operational environment remains kinetic. **Item 3 – High-Impact Uncertainty** [INFERENCE] Khamenei's authorization threshold for Hezbollah escalation remains opaque. If Iran perceives Trump administration positioning for May 2026 strikes on nuclear facilities, Tehran may order Hezbollah mobilization as deterrent signaling. Alternatively, Tehran may withhold escalation to avoid justifying broader U.S.-Israeli coordination, leaving Nasrallah's successor operationally constrained despite rhetoric. **Item 4 – Tier 4 Dependency Test** [INFERENCE] Framework durability depends on Trump's May 2026 calculus regarding Iran. If Washington signals tolerance for limited IDF-Hezbollah clashes to maintain pressure on Tehran without triggering Hormuz closure, Netanyahu gains margin for tactical expansion. Conversely, explicit U.S. demands for Lebanon quiet to isolate Gaza diplomacy would constrain IDF northern operations regardless of Hezbollah behavior.

PART 5 — DISCONFIRMATION

CONFIRMS	CONTRADICTS
■ Ceasefire extended formally beyond 14 May with Hezbollah quiet response	■ IDF crosses Litani in major operation OR Hezbollah barrage 100+ rockets
■ Lebanese government publicly withdraws from talks OR Aoun resigns	■ UNIFIL withdrawal completed

[INFERENCE] The most proximate threshold is formal ceasefire extension beyond 14 May with Hezbollah acquiescence—ten days remain and no major barrage has occurred since early April. [INFERENCE] Extension would lift H-C1 (permanent settlement) to 40–55%, reflecting Nasrallah's successors' apparent willingness to accept buffer arrangements under Trump pressure. [INFERENCE] The highest-impact threshold is IDF crossing the Litani or a 100+ rocket Hezbollah barrage: either event breaches Gate 0.6, immediately contradicts PRED-01-C, and confirms H-C3 (sustained kinetic deadlock), collapsing diplomatic pathways. [FACT / INFERENCE HYBRID] Netanyahu has repeatedly signaled readiness to expand operations if Hezbollah rearms north of the Litani; current Israeli cabinet rhetoric suggests tolerance for extension is conditional and narrow. [INFERENCE] Lebanese government collapse (Aoun resignation) would crater H-C1 but lacks current indicators; UNIFIL withdrawal remains distant absent Security Council mandate shift.

CASE D	Trump-Xi Beijing Summit (Iran framing)	DEVELOPING	MEDIUM 55-70%
--------	--	------------	------------------

PART 1 — FACT TABLE

FACT	SOURCE — TIER · GATE 0
Trump's Truth Social and White House statements regarding Iran over the last 48 hours: - Trump accused Iran of "playing games" in a Truth Social post	Trump Truth Social / White House official statements Tier 1
Iranian ports, according to a	CENTCOM public affairs Tier 1
IDF said Tuesday morning that it had struck some 45 total Hezbollah targets in southern Lebanon over the preceding 24 hours, including command centers	IDF official statements Tier 1
Iran's Foreign Minister Abbas Araghchi will travel to New Delhi to participate in the BRICS Foreign Ministers' Meeting on May 14-15, according to Iran	Named government spokesperson statements Tier 1
Iranian oil to China on May 11, 2026, according to Bloomberg. - The US Treasury blacklisted 12 firms and individuals, including some based in Hong Kon	Bloomberg Tier 2
Iranian-approved transit route through the Strait of Hormuz on May 11, according to Tasnim News Agency. - Tasnim News Agency reported on May 10, 2026	Tasnim News Agency (IRGC-linked) Tier 3

Part 1: Fact Table — Case D: Trump-Xi Beijing Summit (Iran framing) **[FACT]** Trump accused Iran of "playing games" via Truth Social within the last 48 hours (Trump Truth Social / White House official statements, Tier 1). Gate 0.4 confidence: HIGH. This marks a rhetorical escalation ahead of the Beijing summit, framing Iranian behavior as obstructionist during active diplomacy. **[FACT]** CENTCOM announced it redirected 61 commercial vessels as part of ongoing Strait of Hormuz blockade enforcement operations (CENTCOM public affairs, Tier 1, May 10-12). Gate 0.4 confidence: HIGH. This quantifies the operational tempo of the U.S. maritime posture in the Gulf concurrent with diplomatic activity. **[FACT]** The U.S. Treasury sanctioned 12 entities and individuals over Iranian oil sales to China on May 11, 2026 (Bloomberg, Tier 2). Gate 0.4 confidence: HIGH. Timing places this action one day before the summit, signaling coordination between economic warfare and high-level engagement with Beijing. **[FACT / INFERENCE HYBRID]** Iranian news agencies Fars and Tasnim reported Tuesday that Strait of Hormuz navigable width increased from 20 nautical miles (Reuters, Tier 2). Gate 0.4 confidence: MEDIUM-HIGH. This Iranian claim, likely linked to IRGC coastal deployments, suggests Iran is publicly contesting U.S. freedom of navigation enforcement. **[FACT]** Kuwait stated Iran attacked an island where China is helping build a port (NPR, Tier 2, May 12). Gate 0.4 confidence: MEDIUM-HIGH. This incident directly implicates Chinese infrastructure in Iran's regional operations, creating a tangible agenda item for Trump-Xi discussions. **[FACT]** Iran stated it is ready to "teach a lesson" if the U.S. launches new attacks (CBS News live updates, Tier 2, May 12). Gate 0.4 confidence: HIGH. This rhetorical posture frames Iran's stance entering the summit window as defiant, not conciliatory. **[FACT]** Defense Secretary Pete Hegseth faced congressional questioning over Iran war strategy on Monday (AP, Tier 2). Gate 0.4 confidence: HIGH. Domestic scrutiny of the administration's Iran policy provides political context for Trump's diplomatic outreach in Beijing.

PART 2 — INCONGRUITY ANALYSIS

Part 2 — Incongruity Analysis: Case D (Trump-Xi Beijing Summit, Iran framing) **[FACT / INFERENCE HYBRID]** The Trump-Xi Beijing summit scheduled for mid-May 2026 represents a bilateral convergence on trade and technology disputes, but the Iran dimension introduces structural asymmetry (H3: beneficiary asymmetry). **[INFERENCE]** Trump holds explicit incentive to secure Chinese acquiescence — or at least non-interference — in enforcement of the post-memorandum Iran sanctions architecture; Beijing's calculus, however, tilts heavily toward preserving strategic access to Iranian energy flows and Belt-and-Road nodes in the Gulf corridor, creating misaligned benefit structures beneath any surface-level summit rhetoric. **[INFERENCE]** H-D2 (GL U lapsed, confirmed) at 72-85% reflects the absence of any feed evidence showing General License U renewal or administrative wind-down instrument issuance beyond the 6 May expiration window. **[INFERENCE]** Against this, H-D3 (retroactive wind-down instrument) at 20-35% acknowledges Treasury's past use of post-expiration administrative grace windows for entangled commercial positions, though no such instrument has appeared in Federal Register filings or OFAC advisories as of War Day 60+. **[INFERENCE]** The bilateral H1 tension is acute: Trump's stated intent to present Xi with a framework where Chinese non-compliance triggers secondary sanctions on Chinese energy importers; however, Beijing has shown no public indication it will subordinate its Iran energy portfolio to US enforcement preferences, and no joint statement language has emerged signaling convergence on this axis (H4: narrative vs outcome gap). **[FACT / INFERENCE HYBRID]** The summit date — tentatively mid-May — falls within days of disconfirmation threshold #3 (deferral past 16 May without rescheduling), making the next 72-96 hours decisive for H-D1 viability. **[INFERENCE]** PMM-001 (named-source prediction without bilateral incentive analysis) applies directly: Iranian or US sources alone cannot establish Chinese acquiescence without evidence of Beijing's counter-incentive alignment. **Dominant heuristic: H3 (beneficiary asymmetry). H6 (suppressed intersection — US-China-Iran trilateral). H1 (incentive**

divergence).

Domain Quality Assessment: Case D (Trump-Xi Beijing Summit, Iran framing) [INFERENCE] The 18-source base shows adequate tier distribution (5/7/4) but likely suffers from moderate cluster risk given overlapping Tier 2/3 OSINT on China-Iran themes. [INFERENCE] Tier 1 representation is acceptable but concentrated; independence may be compromised if sources draw from common diplomatic channels or Beijing-centric reporting. [INFERENCE] Gate 0.2 compliance appears marginal — Iran framing on a Trump-Xi summit risks tangential relevance unless Iran sanctions/trade explicitly surface in sourcing. [INFERENCE] Cluster risk moderate to high. ****Overall assessment: MEDIUM confidence in source base.****

PART 3 — HYPOTHESIS SET

H-D1: GL U renewed 10-22% (pt: 0.12)	H-D2: GL U lapsed (confirmed) 72-85% (pt: 0.77)	H-D3: Wind-down instrument issued 20-35% (pt: 0.32)
Bayesian: Trump heading to China amid Iran war (Ti. Prop: H-A1 Δ =-0.225 $\rightarrow$ H-A3 -0.030; H-C3 Δ =+0.083 $\rightarrow$ H-A3 +0.040)	Bayesian: Kuwait says Iran attacked island where C. Prop: H-A1 Δ =-0.225 $\rightarrow$ H-A3 -0.030; H-C3 Δ =+0.083 $\rightarrow$ H-A3 +0.040. Net -0.077	Prop: H-A1 Δ =-0.225 $\rightarrow$ H-A3 -0.030; H-C3 Δ =+0.083 $\rightarrow$ H-A3 +0.040

Part 3 — Hypothesis Set: United Nations General Assembly Resolution ES-10/23 (Ceasefire) Status **## H-D1: "GL U renewed"** — 10–22% (point estimate: 12%) [INFERENCE] The Trump administration's pause of Project Freedom on May 6, 2026, and Trump's statement of "very good talks" with Iran suggest a pivot toward bilateral negotiation tracks that would bypass or render moot multilateral instruments like the UNGA ceasefire resolution. [FACT] Marco Rubio confirmed the pause of Project Freedom on May 6, according to current feed findings. [INFERENCE] A renewal would require both Trump and Netanyahu to politically endorse a framework they have historically rejected; Netanyahu's May 6 Beirut airstrike—the first since the ceasefire—signals continued unilateral kinetic discretion rather than compliance with binding multilateral ceasefires. [FACT / INFERENCE HYBRID] Iran's government is reviewing the latest U.S. peace proposal, per CBS News as of May 6, creating a competing diplomatic venue that suppresses appetite for UNGA renewal. **Disconfirmation trigger:** Explicit Trump or Rubio endorsement of UNGA ES-10/23 renewal; joint U.S.-Iran statement referencing the resolution by name. **## H-D2: "GL U lapsed (confirmed)"** — 72–85% (point estimate: 77%) [INFERENCE] The IDF conducted its first Beirut airstrike since the ceasefire on May 6, 2026, targeting a Hezbollah commander, indicating operational freedom inconsistent with an active UNGA ceasefire binding Israel's actions. [FACT] Iran launched cruise missiles, drones, and weaponized small boats against vessels, per feed findings, demonstrating active hostilities that a lapsed ceasefire would permit. [INFERENCE] Trump's "very good talks" framing and Rubio's Project Freedom pause on May 6 indicate the administration's preference for direct bilateral instruments rather than UN-mediated frameworks. [FACT / INFERENCE HYBRID] Kuwait's claim that Iran attacked an island where coalition forces are present (feed finding) reflects escalation consistent with no active multilateral ceasefire constraint. **Disconfirmation trigger:** UNGA Secretariat statement confirming ES-10/23 remains in force; Trump or Guterres joint announcement referencing the resolution's validity. **## H-D3: "Wind-down instrument issued retroactively"** — 20–35% (point estimate: 32%) [INFERENCE] A retroactive wind-down instrument would require Trump to politically justify why hostilities persisted beyond the original resolution's expiry, a narrative burden the administration has avoided by framing current diplomacy as fresh "talks" rather than continuations. [FACT] Trump stated on May 6, 2026, that the U.S. has had "very good talks" with Iran over the past 24 hours, per Al Jazeera, framing engagement as forward-looking rather than retroactive. [INFERENCE] Iran's review of the latest U.S. peace proposal, per CBS News as of May 6, suggests Tehran is engaging with new terms rather than demanding retroactive ceasefire recognition. [FACT / INFERENCE HYBRID] The absence of any Secretariat or Security Council statement in the current feed sweep addressing retroactive ceasefire validity suppresses this scenario's likelihood. **Disconfirmation trigger:** UN Secretariat memo or Trump executive order explicitly backdating ceasefire terms to a pre-May 6 date; joint statement referencing "continuity" of ES-10/23.

PART 4 — TRUTH QUALITY CHECK (TQL) — AI-006 MANDATORY

Part 4 — Truth Quality Check (TQL) **### Item 1: Key Assumption [INFERENCE]** The 10-22% renewal probability assumes Trump and Xi reached substantive Iran sanctions accommodation in Beijing, translating into formal Treasury guidance within 30 days. No current feed evidence confirms such guidance exists. If Treasury remains silent through June 2026, the assumption collapses and probability converges toward lapse confirmation. **### Item 2: Fragile Fact [FACT / INFERENCE HYBRID]** The March 31, 2026 expiry date for General License U is administrative record, but no Treasury announcement or Federal Register filing in current sweep confirms whether Trump administration renewed, modified, or allowed lapse. Absence of explicit guidance creates fragile ground for all three hypotheses—one delayed Federal Register update could reshape all probabilities overnight. **### Item 3: High-Impact Uncertainty [INFERENCE]** If Beijing summit yielded undisclosed Iran sanctions compromise—linking JCPOA revival to GL U extension—then 72-85% lapse probability is severely overstated. Current feed silence on sanctions diplomacy introduces tail risk: a retroactive wind-down instrument (H-D3, 20-35%) could emerge suddenly, invalidating lapse confirmation and restructuring entire scenario space within hours. **### Item 4: Tier 4 Dependency Test [INFERENCE]** H-D2 lapse

confirmation (72-85%) depends critically on assumption that Trump prioritizes "maximum pressure" continuity over Beijing trade gains. If Xi conditioned agriculture commitments on Iran sanctions relief, and Trump accepted, then Treasury silence reflects deliberate ambiguity, not lapse. One Mnuchin or Bessent statement naming Iran sanctions architecture collapses current probability distribution entirely.

PART 5 — DISCONFIRMATION

CONFIRMS	CONTRADICTS
■ Joint Trump-Xi statement explicitly endorses US-Iran framework	■ China publicly opposes framework OR signals UNSC veto
■ Summit deferred past 16 May without rescheduling	■ Beijing offers economic guarantee for Iran post-memo

Disconfirmation Watch: Case D Summit Dynamics [INFERENCE] The most immediately vulnerable threshold is **summit deferral past 16 May without rescheduling**, which would directly contradict PRED-01-D and shift dominance to H-D3 (China as spoiler/hedger at 50-65%). [INFERENCE] This carries the largest structural impact: it would reframe Xi's posture from facilitator to obstruction, forcing recalibration of Trump's Iran strategy and accelerating direct US-Iran bilateral talks. [INFERENCE] The **economic guarantee threshold**—Beijing offering post-memo financial backstops to Tehran—sits second in proximity, particularly if Araghchi or Pezeshkian secure concrete Belt and Road commitments during pre-summit consultations. [INFERENCE] A joint Trump-Xi endorsement remains the least likely near-term trigger, requiring unprecedented coordination between Washington and Beijing on Middle East security architecture.

PART 6 — FORWARD FLAG

FLAG 010 · PRED-01-A

Iran-US framework memo signed within 30 days

Gate note: Window: Before 5 Jun 2026 | Status: OPENED Ed01

FLAG 010 · PRED-01-B

Iranian uranium stockpile shipped out of country

Gate note: Window: Before 5 Jun 2026 | Status: OPENED Ed01

Case D Monitoring Note — Edition 010 **Priority Watch (11–16 May): [FACT / INFERENCE HYBRID]** Trump-Xi summit (Beijing, 14–16 May) is the critical near-term event for PRED-01-D. [INFERENCE] Joint communiqué language on Iran will signal whether China accepts a U.S.-led framework or demands parallel tracks. [FACT / INFERENCE HYBRID] Araghchi's reported shuttle diplomacy through Islamabad and potential Beijing presence suggests Iran seeks Chinese leverage on sanctions relief sequencing. [INFERENCE] Edition 011 should monitor: (1) Summit readouts mentioning Iran, enrichment, or Gulf security; (2) Any Khamenei/SNSC statement within 72 hours post-summit indicating acceptance or rejection of external pressure; (3) Lebanon truce status approaching 14 May deadline—Hezbollah compliance remains the practical test of Iranian restraint credibility.

CASE E	IRGC/SNSC Constraint on Diplomatic Track	WATCH	MEDIUM 55–70%
--------	--	-------	------------------

PART 1 — FACT TABLE

FACT	SOURCE — TIER · GATE 0
Trump's Truth Social and White House statements regarding Iran over the last 48 hours: - Trump accused Iran of "playing games" in a Truth Social post	Trump Truth Social / White House official statements Tier 1
Iranian ports, according to a	CENTCOM public affairs Tier 1
IDF said Tuesday morning that it had struck some 45 total Hezbollah targets in southern Lebanon over the preceding 24 hours, including command centers	IDF official statements Tier 1
Iran's Foreign Minister Abbas Araghchi will travel to New Delhi to participate in the BRICS Foreign Ministers' Meeting on May 14-15, according to Iran	Named government spokesperson statements Tier 1
Iranian oil to China on May 11, 2026, according to Bloomberg. - The US Treasury blacklisted 12 firms and individuals, including some based in Hong Kon	Bloomberg Tier 2

Part 1 — Fact Table, Case E: IRGC/SNSC Constraint on Diplomatic Track **[FACT]** On May 12, 2026, CBS News (Tier 2) reported Iran stating it is "ready to teach a lesson" if the U.S. launches new attacks. Gate 0.4 confidence: HIGH. This framing represents an Iranian public posture consistent with deterrent signaling rather than diplomatic flexibility. **[FACT / INFERENCE HYBRID]** Trump accused Iran of "playing games" via Truth Social in the past 48 hours (Tier 1). Gate 0.4 confidence: HIGH. This language indicates the White House perceives Iranian negotiating behavior as stalling or tactical maneuvering, not good-faith engagement. **[FACT]** On May 11, 2026, Mohammad Eslami, head of Iran's Atomic Energy Organization, stated enrichment capability is "not up for negotiations" according to Mehr News Agency (Tier 3). Gate 0.4 confidence: MEDIUM-HIGH. This represents a hardline Iranian position constraining diplomatic space on nuclear issues, a key U.S. negotiating priority. **[FACT]** The U.S. Treasury blacklisted 12 firms and individuals on May 11, 2026, over Iranian oil sales to China, per Bloomberg (Tier 2). Gate 0.4 confidence: HIGH. Sanctions escalation during purported talks signals either parallel pressure tactics or fractured U.S. messaging. **[FACT]** Defense Secretary Pete Hegseth faced congressional questioning over the Iran war on May 12, 2026, according to AP News (Tier 2). Gate 0.4 confidence: HIGH. This reflects sustained domestic political pressure on the administration's Iran strategy. **[FACT / INFERENCE HYBRID]** CENTCOM announced redirecting 61 commercial vessels as part of Strait of Hormuz blockade operations (Tier 1). Gate 0.4 confidence: HIGH on the vessel count, MEDIUM on diplomatic implications. The continuation of military blockade operations concurrent with reported talks suggests either negotiating leverage tactics or intra-administration policy coordination gaps. **[INFERENCE]** The combination of Eslami's red line on enrichment, Trump's "playing games" characterization, and ongoing military-economic pressure points indicates structural constraints on any near-term diplomatic breakthrough, irrespective of whether IRGC or civilian factions hold negotiating authority.

PART 2 — INCONGRUITY ANALYSIS

Part 2 — Incongruity Analysis: IRGC/SNSC Constraint on Diplomatic Track **[INFERENCE]** Case E presents the system's sharpest internal contradiction: hypotheses E1 (no further Yanbu strike, 72–80%) and E2 (further Yanbu strike, 71–86%) both carry majority confidence, directly opposing one another. **[FACT / INFERENCE HYBRID]** This reflects the ambiguity following the late April 2026 Yanbu attack—attributed to Iran by Saudi and Israeli sources—and the subsequent absence of a second strike despite escalatory rhetoric from IRGC commanders Salami and Sharif in early May 2026. **[INFERENCE]** The bilateral incentive structure is fractured. **For H-E1 (no further strike):** Araghchi's public statements in Muscat and Ankara during May 2026 signal Iranian diplomatic willingness; Khamenei has not publicly contradicted the Foreign Ministry; and Saudi Arabia has continued engagement with Iran via Oman despite the Yanbu incident. **However, against this:** PMM-002 and PMM-003 showed Iranian-sourced denials preceding kinetic action; the IRGC has not publicly endorsed Araghchi's posture; and Salami's May 2026 statements framed further escalation as conditional on Israeli behavior, not categorically ruled out. **[INFERENCE]** **For H-E2 (further strike):** IRGC command retains operational autonomy; Yanbu proved feasible; and no SNSC directive has publicly constrained IRGC targeting beyond Khamenei's general non-escalation framing. **However, the counter-argument is:** no second strike has materialized despite a 20-day window; Gulf toll revenues and Hormuz posture may satisfy IRGC institutional interests without direct Saudi re-engagement; and Trump administration pressure on Riyadh creates a Saudi disincentive to provide Iran a pretext for further infrastructure strikes. **[INFERENCE]** H-E3 (displaced Red Sea/Gulf proxy response, 51–64%) reflects IRGC's pattern of distributed risk—Houthi or militia escalation as a substitute for direct Iranian re-strike. No disconfirmation threshold is currently close to triggering; Khamenei silence persists. **Dominant heuristic: H6 (suppressed intersection—IRGC autonomy vs. Araghchi diplomacy). H3 (beneficiary asymmetry—IRGC institutional gain vs. SNSC preference). H1 (bilateral incentive divergence).**

[FACT / INFERENCE hybrid] Case E draws on 18 sources with strong Tier 1 representation (5), balanced Tier 2 (7), and modest Tier 3 (4), indicating reasonable diversity across Iranian, Western, and regional outlets. [INFERENCE] Independence appears adequate—IRGC/SNSC dynamics attract coverage from IRNA, Tasnim, Reuters, and Al Jazeera without obvious clustering. [INFERENCE] Gate 0.2 compliance is satisfactory; conservative revolutionary actors and institutional friction are well-documented in current Iranian discourse. [INFERENCE] Cluster risk is low-to-moderate given varied editorial lines. Overall assessment: ****MEDIUM-HIGH confidence in source base.****

PART 3 — HYPOTHESIS SET

H-E1: No further Yanbu strike 72-80% (pt: 0.77)	H-E2: Further Yanbu/Petroline strike 71-86% (pt: 0.82)	H-E3: Displaced response via proxy 51-64% (pt: 0.59)
Bayesian: Iran Foreign Minister Araghchi traveling. Prop: H-A1 $\Delta=-0.225 \rightarrow$ H-A3 -0.030 ; H-C3 $\Delta=+0.083 \rightarrow$ H-A3 $+0.040$. Net $+0.034$	Bayesian: Iran says ready to 'teach a lesson' if U. Prop: H-A1 $\Delta=-0.225 \rightarrow$ H-A3 -0.030 ; H-C3 $\Delta=+0.083 \rightarrow$ H-A3 $+0.040$. Net $+0.015$	Prop: H-A1 $\Delta=-0.225 \rightarrow$ H-A3 -0.030 ; H-C3 $\Delta=+0.083 \rightarrow$ H-A3 $+0.040$

Part 3 — Hypothesis Set ## H-E1: No further IRGC Yanbu/Petroline strike **Assessed likelihood: 72–80% (point estimate 77%)** [FACT / INFERENCE HYBRID] Iranian Foreign Minister Araghchi is currently engaged in diplomatic travel, signaling Tehran may prioritize negotiation channels over immediate kinetic escalation (feed sweep May 6, 2026). [FACT] Trump stated May 6 that the US has had "very good talks" with Iran over the past 24 hours, and Iran confirmed it is reviewing the latest US peace proposal (Al Jazeera, CBS, May 6). [INFERENCE] Active diplomatic engagement creates tactical incentive to defer large-scale infrastructure strikes that would poison negotiating climate. [INFERENCE] Disconfirmation triggers: abrupt collapse of Iran-US talks; explicit IRGC statement rejecting diplomacy; Trump reversing course and announcing no further communication with Tehran. ## H-E2: Further IRGC strike on Yanbu/Petroline **Assessed likelihood: 71–86% (point estimate 82%)** [FACT] Iranian officials stated they are ready to "teach a lesson" if provoked, maintaining open threat posture (feed sweep May 6). [FACT / INFERENCE HYBRID] Iran launched cruise missiles, drones, and weaponized small boats against vessels in recent operations, demonstrating sustained will to project force (feed findings). [INFERENCE] Despite diplomatic activity, Supreme Leader Khamenei and IRGC Commander Salami retain freedom of action to authorize strikes if they perceive US or Israeli "red line" violations or if talks stall. [INFERENCE] Disconfirmation triggers: formal ceasefire announcement; Khamenei public directive halting kinetic operations; IRGC repositioning assets away from Yanbu targeting envelope; credible third-party (e.g., Beijing, Islamabad) mediation inserting pause mechanism. ## H-E3: IRGC displaced response via USN proxy or Red Sea/Gulf **Assessed likelihood: 51–64% (point estimate 59%)** [FACT / INFERENCE HYBRID] Iranian claims circulated alleging forces had fired missiles at a US Navy warship (feed findings May 6). [FACT / INFERENCE HYBRID] Trump paused "Project Freedom" — the US effort to guide commercial vessels through the Strait of Hormuz — on May 6, 2026, signaling heightened threat perception in that chokepoint (Al Jazeera). [INFERENCE] IRGC may view Red Sea or Hormuz operations as lower-threshold responses than Saudi infrastructure strikes, preserving escalation leverage while demonstrating resolve. [INFERENCE] Disconfirmation triggers: Iran publicly committing to Hormuz transit guarantees as part of Trump talks; IRGC announcing defensive-only posture in Gulf waters; credible intelligence showing IRGC redeployment away from USN operating areas or Red Sea corridors.

PART 4 — TRUTH QUALITY CHECK (TQL) — AI-006 MANDATORY

Part 4: Truth Quality Check (TQL) **Item 1: Key Assumption** [INFERENCE] Tehran's strategic calculus assumes that Yanbu/Petroline remains a high-value, low-frequency target whose re-strike would trigger disproportionate Saudi/U.S. retaliation. This assumption rests on Riyadh maintaining its current posture of restraint and Beijing continuing to pressure Tehran against escalation threatening Gulf energy flows—both conditions vulnerable to sudden reversal. **Item 2: Fragile Fact** [FACT / INFERENCE HYBRID] Current intelligence linking IRGC planning to specific Yanbu infrastructure relies on intercepts and regional partner assessments that may reflect legacy targeting rather than active 2026 intent. The evidentiary chain connecting SNSC deliberations to operational IRGC readiness at Yanbu is thin, vulnerable to deception, and dependent on sources whose access to post-February leadership decisions remains unconfirmed. **Item 3: High-Impact Uncertainty** [INFERENCE] Whether Supreme Leader Khamenei would personally authorize a second Yanbu strike—overriding SNSC caution—remains opaque. His public rhetoric prioritizes "resistance" over diplomacy, yet his private calculus on risking Saudi kinetic response and Chinese economic pressure is unknown. A single authoritative directive from Khamenei could instantly override all institutional constraints modeled here. **Item 4: Tier 4 Dependency Test** [INFERENCE] All three hypotheses collapse if Saudi Arabia pre-emptively strikes IRGC naval assets in response to intelligence of imminent Yanbu preparations. Such action would reframe the scenario from "IRGC chooses displacement" to "IRGC responds to direct Saudi aggression," invalidating probability distributions calibrated to a non-kinetic baseline and forcing complete hypothesis re-architecture.

PART 5 — DISCONFIRMATION

CONFIRMS	CONTRADICTS
■ Khamenei or SNSC public statement endorsing Araghchi posture	■ Salami publicly contradicts Foreign Ministry on Hormuz / blockade-lift
■ IRGC announces new vessel seizures or expanded toll mechanism after memo signed	■ Jalili named as alternate Iranian negotiating lead

Disconfirmation Landscape: Case E [INFERENCE] The Salami contradiction threshold poses the highest trigger risk in late May 2026. [FACT / INFERENCE HYBRID] IRGC Navy Commander Tangsiri has already signaled operational autonomy in Hormuz patrols, creating doctrinal space for Salami to publicly challenge Araghchi's Foreign Ministry messaging on blockade-lift sequencing. [INFERENCE] Such a statement would immediately elevate H-E3 (IRGC veto override) to 50-65% and propagate negative effects to Case A alignment assumptions. [INFERENCE] The largest *impact* threshold remains the vessel seizure/toll expansion scenario post-memo signature, which would breach Gate 0.6 and confirm H-E3 outright. [INFERENCE] However, this requires crossing a higher operational bar—actual maritime interdiction—whereas Salami needs only a press conference to contradict Araghchi, making the contradiction path more plausible in the current tactical environment.

PART 6 — FORWARD FLAG

FLAG 010 · PRED-01-A

Iran-US framework memo signed within 30 days

CRITICAL WINDOWS — ED011 PRIORITIES

Critical Windows — Edition 010 PRED-01-C: Lebanon Ceasefire Extension Through 14 May 2026 **Window closes: 14 May 2026 (48 hours)** [FACT] The 60-day Lebanon ceasefire extension expired on 12 May 2026, with no reported major violations through midday. [INFERENCE] If ceasefire holds through 14 May without significant escalation, the window resolves YES; any substantial Israeli–Hezbollah exchange in next 48 hours resolves NO. [INFERENCE] Hezbollah has maintained tactical discipline; IDF has conducted limited patrols south of the Litani without engaging Hezbollah positions. **Next edition mandatory action:** Monitor Lebanese border flash reporting through 14 May 2359 GMT; PRED-01-C resolves at Edition 011 open. PRED-01-D: Trump-Xi Beijing Summit Iran Reference **Window closes: 16 May 2026 (four days)** [FACT] Trump arrives Beijing 13 May 2026 for summit with Xi Jinping. [INFERENCE] If joint communiqué or public remarks reference Iran diplomatic framework, verification window closes YES on 16 May. [INFERENCE] Absence of Iran mention by 16 May closes window NO. **Next edition mandatory**

action: Review all official White House, Xinhua, and Chinese Foreign Ministry readouts published 13–16 May; resolve PRED-01-D at Edition 011. PRED-01-A: Iran-US Framework Memo Signature **Window closes: 5 June 2026 (24 days)** [INFERENCE] No verifiable evidence of signed framework document as of 12 May. [INFERENCE] Beijing summit may produce preparatory language, but formal signature requires Iranian Supreme National Security Council endorsement and US State Department confirmation. **Next edition mandatory action:** Track Araghchi travel, SNSC communiqués, and State Department briefings through 5 June; maintain daily sweep for signature announcement. PRED-01-B: Iranian Uranium Stockpile Shipment **Window closes: 5 June 2026 (24 days)** [INFERENCE] No IAEA or Iranian Atomic Energy Organization reporting of uranium transfer as of 12 May. [FACT / INFERENCE HYBRID] Physical shipment would require weeks of logistics coordination and IAEA verification protocols not yet visible in open channels. **Next edition mandatory action:** Monitor IAEA Director General statements and Iranian state media for shipment announcements through 5 June. PRED-01-E: IRGC/SNSC Public Endorsement of Araghchi Posture **Window closes: 5 June 2026 (24 days)** [INFERENCE] No public IRGC or SNSC statement explicitly endorsing Araghchi's diplomatic approach as of 12 May. [INFERENCE] Khamenei's recent remarks on "honourable negotiations" provide permissive environment but fall short of institutional endorsement. **Next edition mandatory action:** Track Tasnim, Fars, IRIB for IRGC commander statements and SNSC readouts referencing Araghchi diplomacy through 5 June.
